Supplementary Figure 1. On-site synthesis-and-assembly strategy.

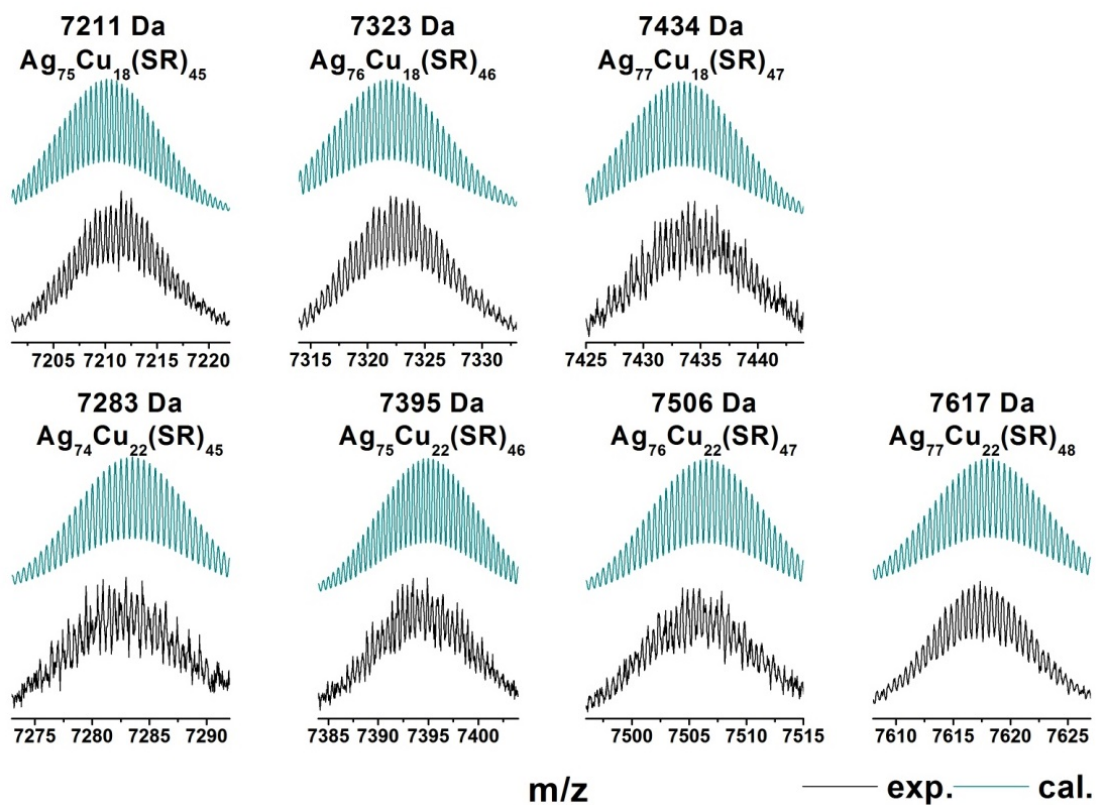

Supplementary Figure 2. UV-Vis spectra for the  $\text{Ag}_{77}\text{Cu}_{22}$  in  $\text{CH}_2\text{Cl}_2$  solution.

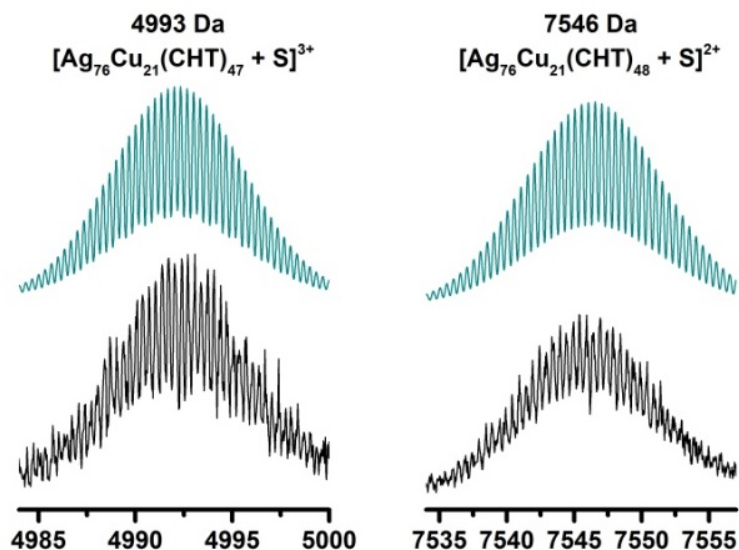

**Supplementary Figure 3.** (a) The full range of the ESI mass spectrum of  $\text{Ag}_{77}\text{Cu}_{22}$  in the positive mode. (b) Mass peaks of  $\text{Ag}_{77}\text{Cu}_{22}(\text{CMT})_{48}$  in 3+ (red line) and 2+ (blue line) charged ions. The numbers shown on the peak labels correspond to the lost  $\text{Ag}_x\text{Cu}_y(\text{SR})_z$  species, and the peak values are equal to the intact molecular weight minus the weight of the  $\text{Ag}_x\text{Cu}_y(\text{SR})_z$  fragment.

**Supplementary Figure 4.** The isotope distributions of the species bearing a charge of 3+. The cyan lines show the corresponding simulated isotope distribution.

**Supplementary Figure 5.** The isotope distributions for the species bearing a charge of 2+. The cyan lines show the corresponding simulated isotope distribution.

**Supplementary Figure 6.** The isotope distributions for species with added S atoms. The cyan lines show the corresponding simulated isotope distribution.

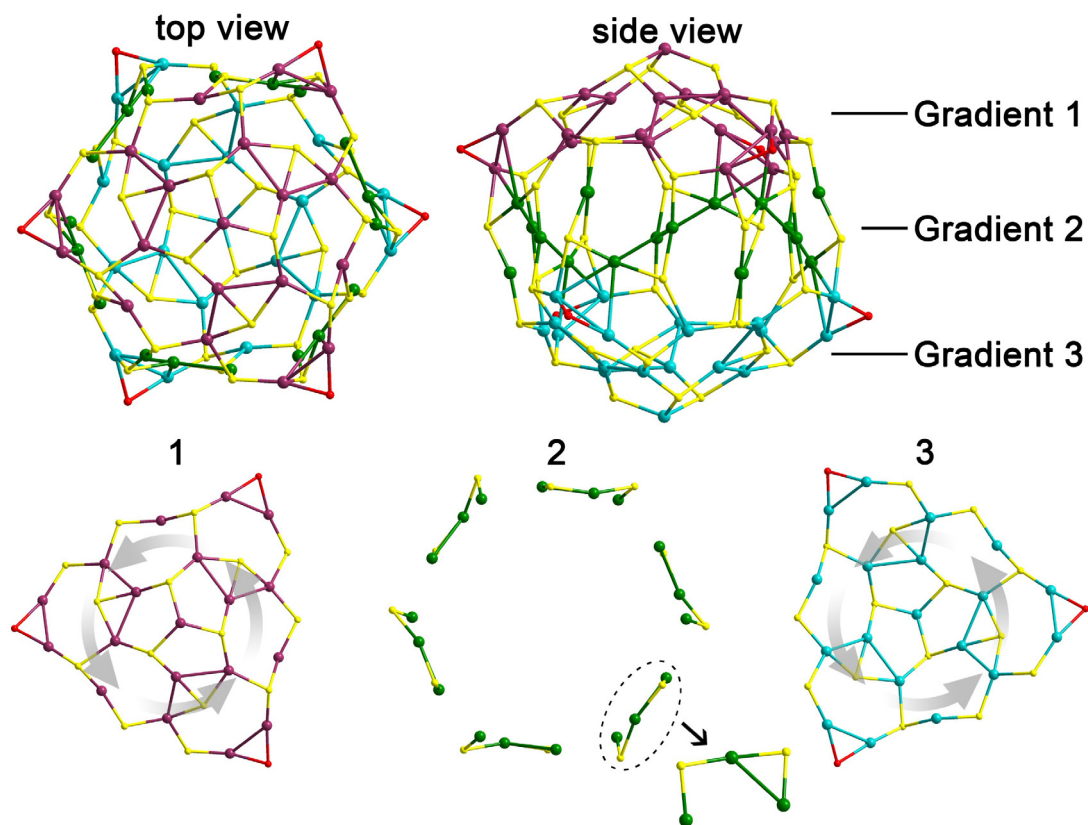

**Supplementary Figure 7.** The mass spectra of  $Ag_{77}Cu_{22}$  nanoclusters reduced by  $NaBH_4$  (black line) and  $NaBD_4$  (red line): (a) +2 charge peaks, (b) +3 charge peaks. The insets are isotope distributions of +2 and +3 molecular ions marked by blue frame.

**Supplementary Figure 8.** Energy Dispersive Spectrometer (EDX) analysis of the  $Ag_{77}Cu_{22}$  crystal.

**Supplementary Figure 9.** Optical microscopy image of  $\text{Ag}_{77}\text{Cu}_{22}$  crystals. Inset shows the truncated octahedron shape of the crystals.

**Supplementary Figure 10.** Anatomy of the  $\text{Ag}_{56}\text{S}_{48}$  shell: top view, side view, and the separated three gradients (1, 2, 3). Color codes: cyan, green, purple, Ag; yellow, red, S.

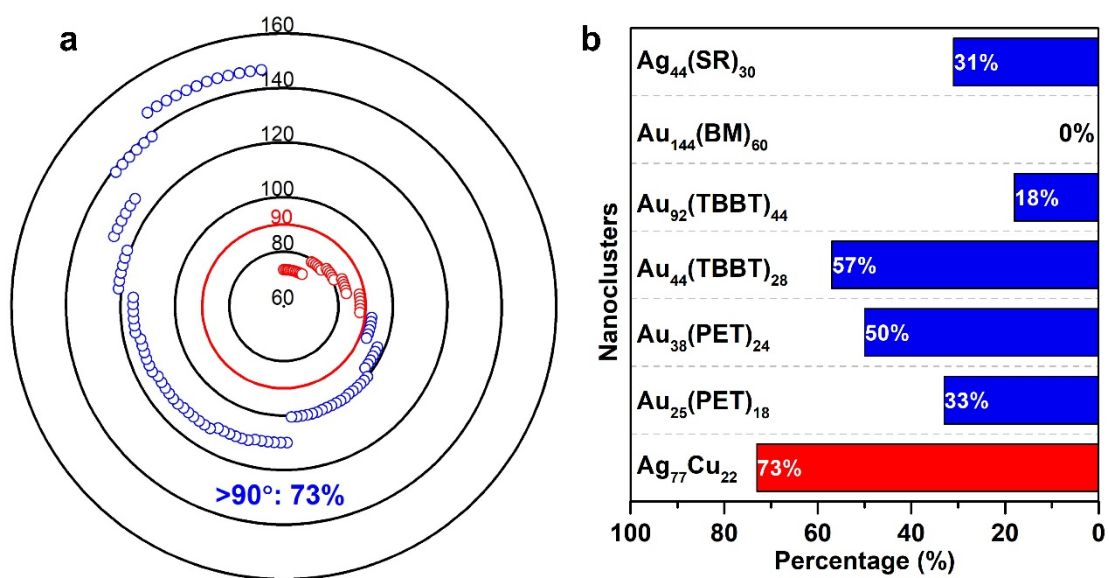

**Supplementary Figure 11.** Tight coordination (green bonds) of the  $(\text{AgCu})_{30}$  shell to the  $\text{Ag}_{56}\text{S}_{48}$

outer shell except for 6 atoms (red). Color codes: green, cyan, pale pink, red, Ag; pale pink, Cu; yellow, S.

**Supplementary Figure 12.** Six types of cyclic staples (a ~ f) on the  $\text{Ag}_{56}\text{S}_{48}$  shell. Color codes: cyan, Ag; yellow, S.

**Supplementary Figure 13.** (a) The statistics for the Ag-S-Ag angles on the  $\text{Ag}_{56}\text{S}_{48}$  shell. (b) A list showing the percentage of M-S-M angles  $> 90^\circ$  for some common NCs.

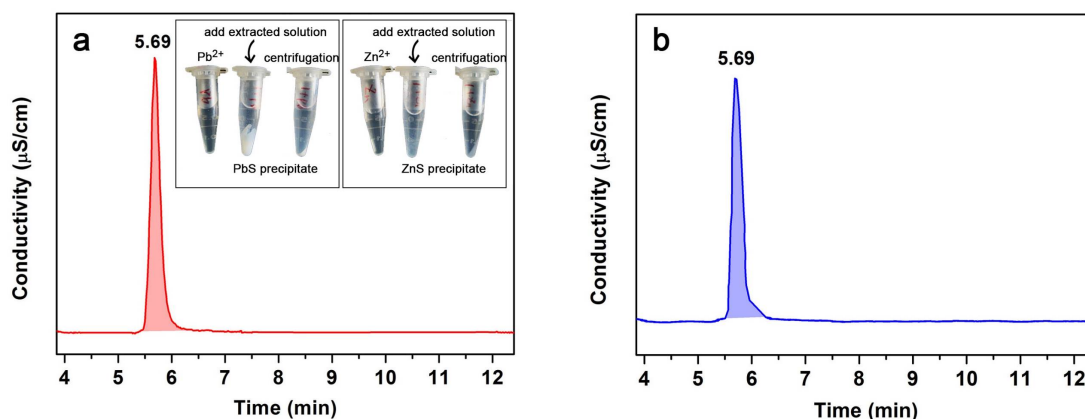

**Supplementary Figure 14.** Ag-S bonds for some typical Ag or AgCu nanoclusters. The bond length mainly covers the range of 2.3~2.7 Å.

**Supplementary Table 1.** The H···H interaction distance between interparticle or intraparticle CHT ligands.

	Inter H···H	Intra H···H	Intra H···H
	2.508	2.961	2.490
	2.468	2.977	2.431
	2.439	2.865	2.231
	2.824	2.677	2.784
Interaction	2.532	2.835	2.366
distance (Å)	2.532	2.354	2.953
	2.824	2.856	2.436
	2.422	2.736	2.820
	2.468	2.823	2.586
	2.635	2.603	3.490
Average (Å)	2.565	2.714	2.525

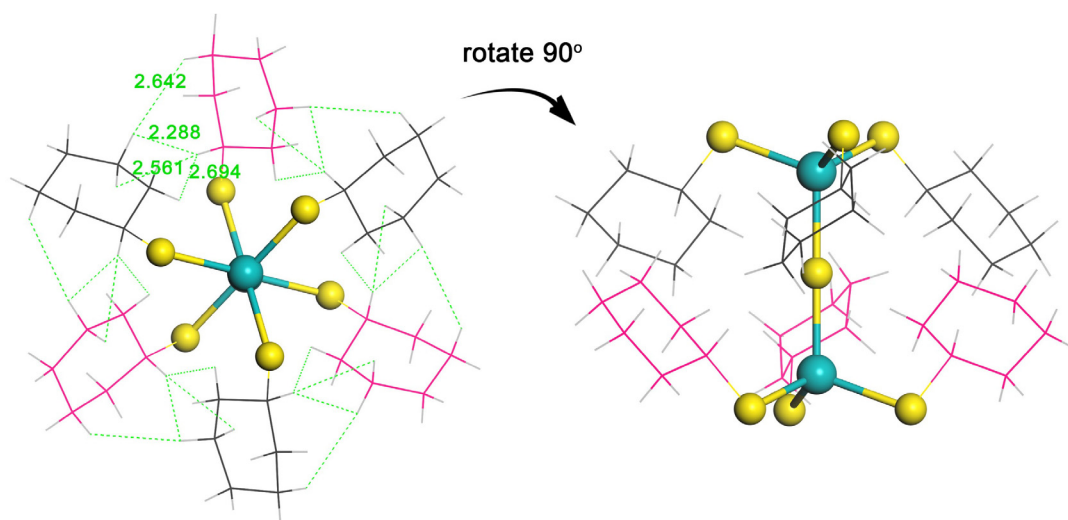

Supplementary Figure 15. XPS patterns of Ag<sub>77</sub>Cu<sub>22</sub> crystals.

Supplementary Figure 16. Ion chromatograph of the aqueous sample (a) after extracting the reaction mixture and (b) after extracting the solution from the crystals. The peak at 5.69 min (retention time) is attributed to S<sup>2-</sup> anions. The inset shows the precipitation reaction between the extracted S<sup>2-</sup> anions and Pb<sup>2+</sup> or Zn<sup>2+</sup> ions.

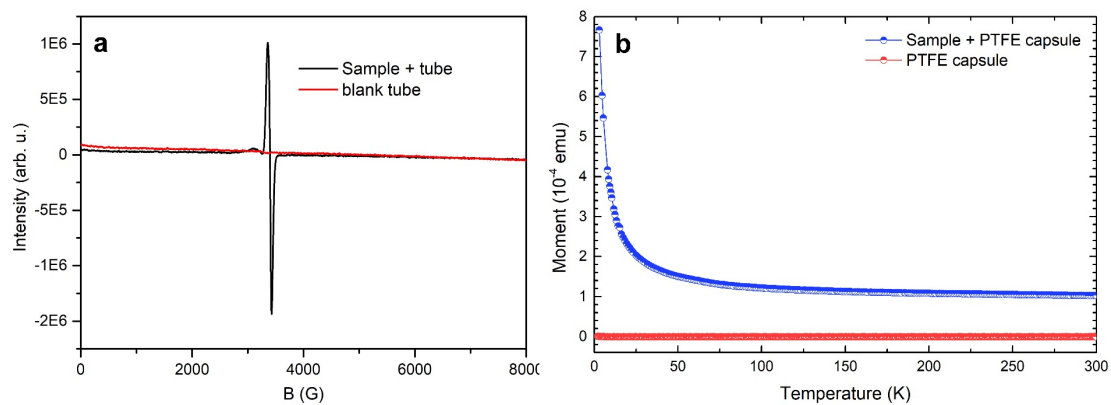

**Supplementary Figure 17.** Infrared spectrum of Ag<sub>77</sub>Cu<sub>22</sub> crystals.

**Supplementary Figure 18.** The interparticle H···H interactions of the CHT ligands stabilizing the linkage. Right: top view. Left: side view. Color codes: cyan, Ag; yellow, S; gray, C; light gray, H.

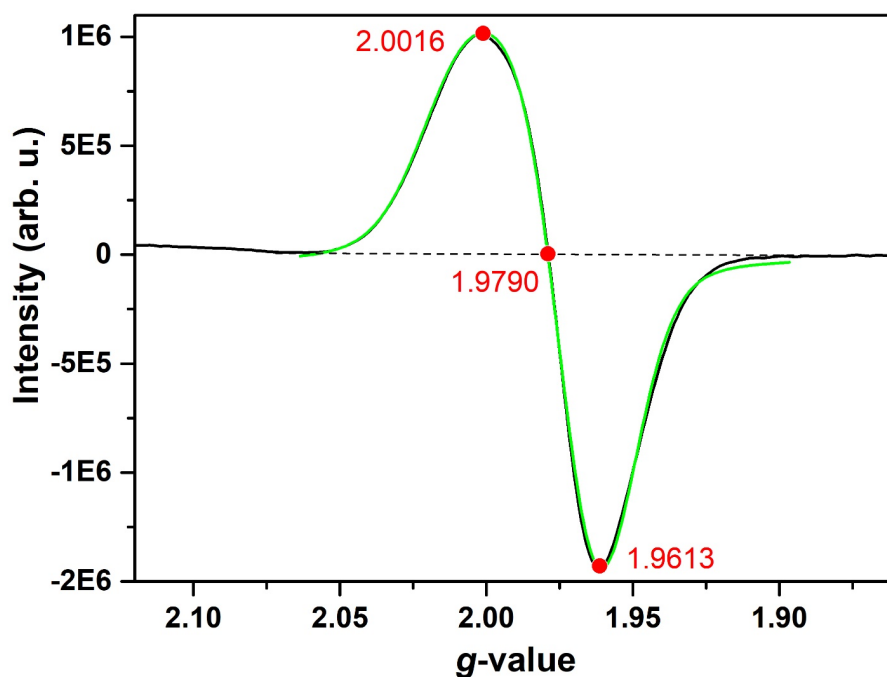

**Supplementary Figure 19.** EPR spectrum for one single crystal of  $\text{Au}_{25}^0$ .

**Supplementary Figure 20.** (a) The comparison of EPR signals of the sample and the blank tube.

(b) The comparison of SQUID curves of the sample and the blank capsule.

**Supplementary Figure 21.** Zoomed (black line) and simulated (green line) signals of  $\text{Ag}_{77}\text{Cu}_{22}$ .

Simulated g-values = (2.0072, 1.9671, 1.9659).

**Supplementary Figure 22.** Structural comparison of crystal structure and optimized structure of  $\text{Ag}_{77}\text{Cu}_{22}$ .

**Supplementary Table 2.** Values of the main spin density distribution for different atoms in  $\text{Ag}_{77}\text{Cu}_{22}$ .

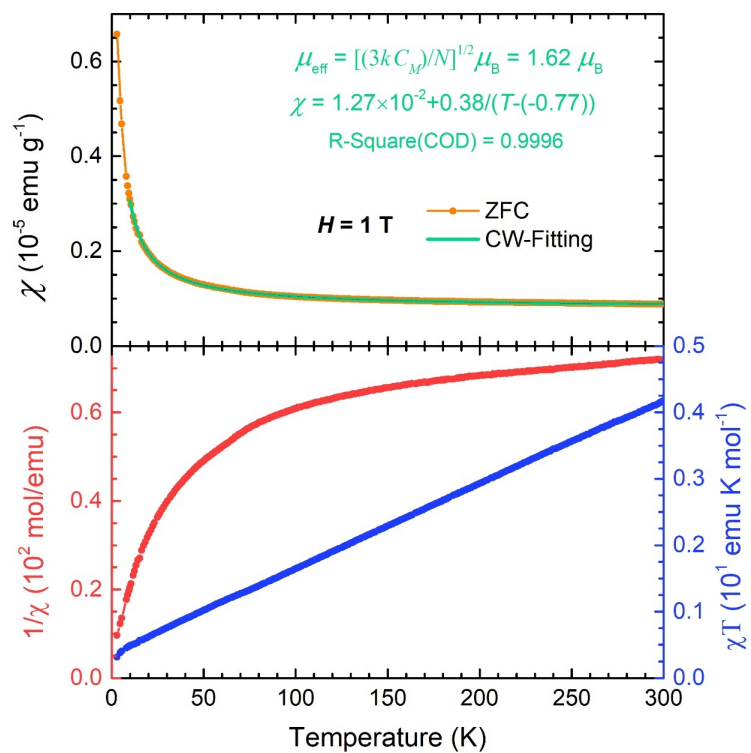

atoms	spin density
linkage S	0.383
Ag atom directly connected with linkage S (Ag1)	0.032
S atom connected with Ag1 (S1)	0.009
Ag atom connected with S1	0.014
kernel metal atoms adjacent to Ag1	0.021
	0.015
	0.014
	0.012

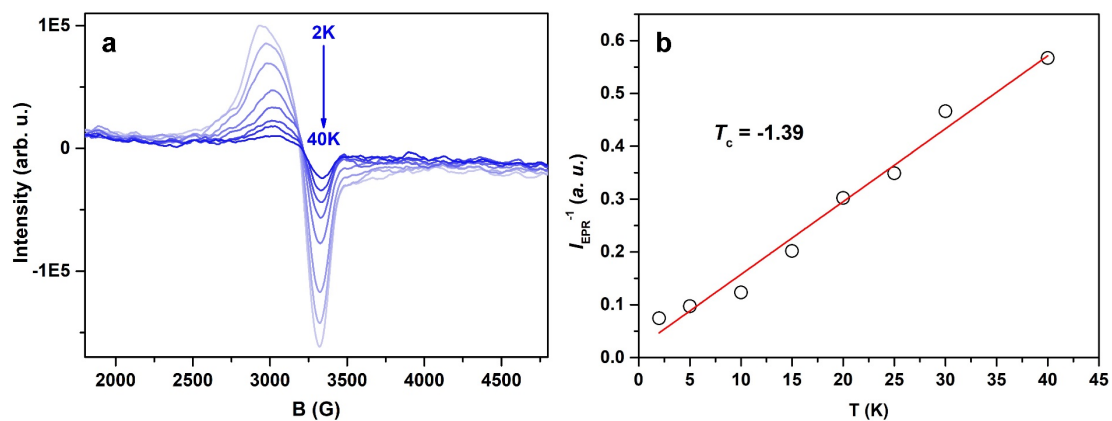

**Supplementary Figure 23.** The spin density distribution for  $\text{Au}_{25}^0$ .

**Supplementary Table 3.** Values of the spin density distribution for different atoms in  $\text{Au}_{25}^0$ .

Au atom location	spin density
central atom	0.024
icosahedral shell	0.032
	0.030
	0.036
	0.034
	0.039
	0.056
six staple motifs	0.003
	0.019
	0.016
	0.009
	0.012
	0.003

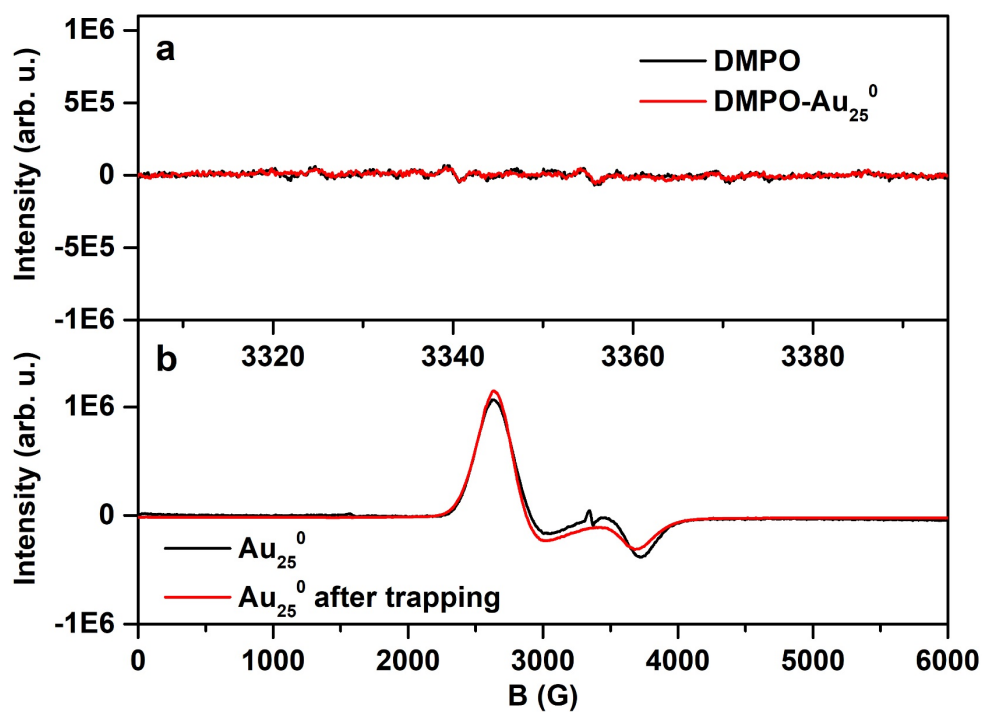

**Supplementary Figure 24.** Temperature dependence of the magnetic susceptibility of  $\text{Ag}_{77}\text{Cu}_{22}$  crystals.

**Supplementary Figure 25.** (a) Temperature-dependent EPR signals of  $\text{Ag}_{77}\text{Cu}_{22}$  crystals. (b) Plot of  $I_{\text{EPR}}^{-1} - T$  and the corresponding linear fitting reveal the noninteraction of the spins ( $T_c = -1.39$ )<sup>1</sup>.

**Supplementary Figure 26.** (a) EPR spectra measured for an aqueous solution of DMPO treated with  $\text{Ag}_{77}\text{Cu}_{22}$  at room temperature. (b) EPR spectra measured for  $\text{Ag}_{77}\text{Cu}_{22}$  after trapping at 2K.

**Supplementary Figure 27.** (a) EPR spectra measured for an aqueous solution of DMPO treated with  $\text{Au}_{25}^0$  at room temperature. (b) EPR spectra measured for  $\text{Au}_{25}^0$  after trapping at 2K.

**Supplementary Figure 28.** Time evolution of the integrated EPR intensity for  $\text{Ag}_{77}\text{Cu}_{22}$  crystals in DCM solution.

**Supplementary Figure 29.** EPR spectrum measured for freshly disassembled  $\text{Ag}_{77}\text{Cu}_{22}$  clusters (the signals are majorly assigned to isolated  $\text{Ag}_{77}\text{Cu}_{22}$  clusters since the measurement samples were prepared by dissolving  $\text{Ag}_{77}\text{Cu}_{22}$  crystals in DCM and then promptly removing the solvent).

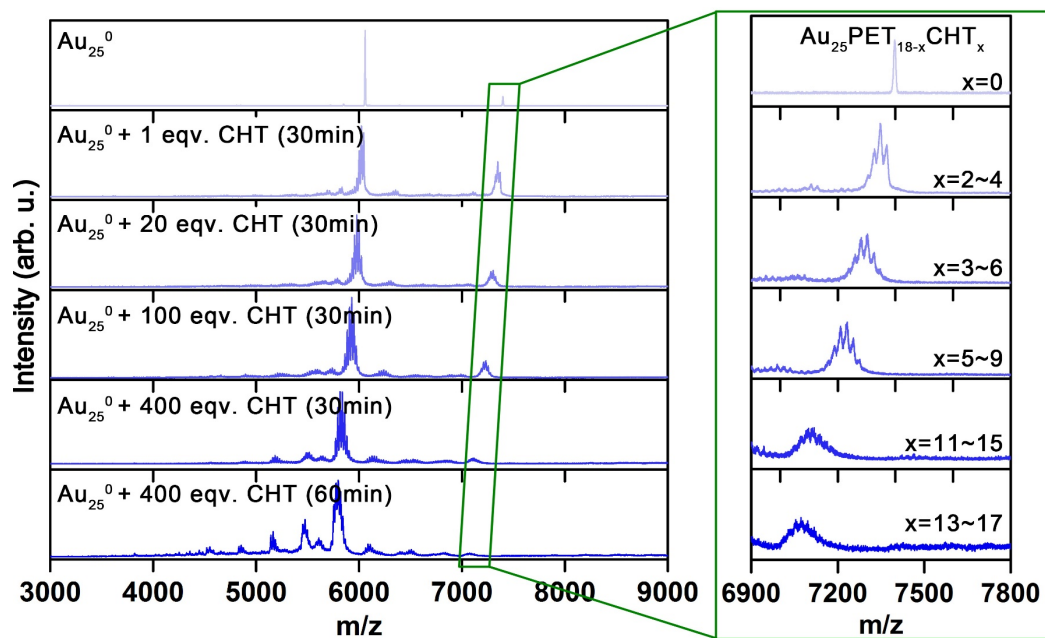

**Supplementary Figure 30.** TEM image of a fresh solution of  $\text{Ag}_{77}\text{Cu}_{22}$  crystals. Blue circles indicate the pairing of two particles.

**Supplementary Figure 31.** TEM images of the solution of (a)  $\text{Au}_{25}$ , (b)  $\text{Au}_{25}\text{-III}$ , and (c)  $\text{Au}_{25}\text{-V}$ . Blue circles indicate the pairing of two particles.

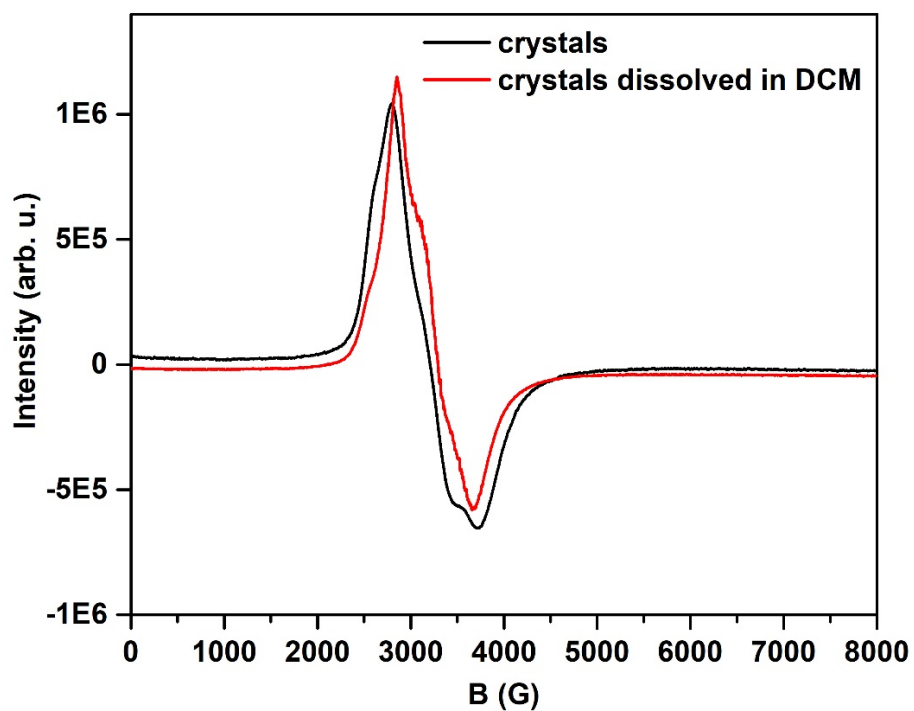

**Supplementary Figure 32.** Crystal structure of  $\text{Au}_{25}(\text{Nap})_{18}$ . Color codes: Green, Au; yellow, S; gray, C; light gray, H.

**Supplementary Figure 33.** MALDI MS spectra for  $\text{Au}_{25}^0$  with different CHT substitution numbers.

Supplementary Figure 34. UV-Vis spectra for  $\text{Au}_{25}^0$  with different CHT substitution numbers.

Supplementary Figure 35. EPR spectra measured for  $\text{Au}_{25}(\text{Nap})_{18}$  in the crystal and solution states.

Supplementary Figure 36. Time evolution of the EPR spectra measured for  $\text{Au}_{25}\text{-III}$  in DCM solution.

Supplementary Figure 37. ESI-MS and UV-Vis spectrometry for the disassembled  $\text{Ag}_{77}\text{Cu}_{22}$  crystals.

**Supplementary Figure 38.** Decomposition of the Ag<sub>77</sub>Cu<sub>22</sub> crystal chain structure in solution.

**Supplementary Table 4.** Crystal data and structure refinement for Ag<sub>77</sub>Cu<sub>22</sub>.

Identification code	191024xn_2_0m
Empirical formula	C <sub>287.99</sub> H <sub>527.99</sub> Ag <sub>77</sub> Cu <sub>22</sub> S <sub>49</sub>
Formula weight	15265.58
Temperature	169.98 K
Wavelength	1.34139 Å
Crystal system	Trigonal
Space group	P-3
Unit cell dimensions	a = 24.9963(8) Å      α = 90°. b = 24.9963(8) Å      β = 90°. c = 21.9463(8) Å      γ = 120°.
Volume	11875.3(9) Å <sup>3</sup>
Z	1.00002
Density (calculated)	2.135 Mg/m <sup>3</sup>
Absorption coefficient	23.282 mm <sup>-1</sup>
F(000)	7297
Crystal size	0.08 x 0.06 x 0.06 mm <sup>3</sup>
Theta range for data collection	3.076 to 55.157°.
Index ranges	-30 ≤ h ≤ 28, -30 ≤ k ≤ 30, -26 ≤ l ≤ 26
Reflections collected	119468
Independent reflections	15122 [R(int) = 0.1647]
Completeness to theta = 53.594°	99.8 %
Absorption correction	Semi-empirical from equivalents
Max. and min. transmission	0.7508 and 0.1171
Refinement method	Full-matrix least-squares on F <sup>2</sup>
Data / restraints / parameters	15122 / 501 / 658
Goodness-of-fit on F <sup>2</sup>	1.161
Final R indices [I > 2σ(I)]	R1 = 0.1068, wR2 = 0.2357
R indices (all data)	R1 = 0.1448, wR2 = 0.2503

Extinction coefficient	0.000162(14)
Largest diff. peak and hole	6.240 and -3.926 e.Å <sup>-3</sup>
