

**Supplementary Table 1. Visual prognosis of rf-PDT and control groups after IPTW  
(excluding patients who had steroid intake)**

	PDT group	Control group	P value
Visual acuity maintenance rate (%)			
At 12 months	93.5	70.4	<0.001
At 24 months	84.9	69.2	0.026
Visual acuity change (mean±SE)*			
At 12 months	-0.07±0.02	-0.007±0.02	0.07
At 24 months	-0.06±0.03	-0.02±0.03	0.32

\*Visual acuity is presented by logMAR. Weighted mean (weighted standard error) is shown.

rf-PDT: reduced-fluence photodynamic therapy

IPTW: Inverse probability of treatment weighting

SE: standard error
