

Figure S1 | Analysis of stromal TILs in residual disease and prognostic implications.

A) Kaplan–Meier curves for i) progression free survival and ii) overall survival in ER+HER2- patients with RCB II and III, stratified according to the median sTIL level (cut-off 3%).

B) Kaplan–Meier curves for i) progression free survival and ii) overall survival in TNBC patients with RCB II and III, stratified according to the median sTIL level (cut-off 8.8%).
