

Figure S3| Cell family analysis of liquid CyTOF profiling of patient PBMCs.

A) t-SNE analysis of matched PBMCs samples from patients with RD (n=4) and pCR (n=4) at baseline, on-treatment and post-surgery showing expression of 16 immune cell populations.

B) Log fold change in naïve and memory B cell clusters at post surgical timepoint, compared to baseline (n=14) LIMMA test.
