

Figure S4 | Changes in cancer gene expression after chemotherapy in ER⁺HER2⁻ and TNBC RCBII/III disease.

- A) Heatmap showing expression of pan-cancer profiling gene set in TNBC residual disease samples from patients who received AC-T with or without additional platinum-based chemotherapy.
- B) Heatmap showing expression of cancer related genes in matched pre-treatment and residual disease ER⁺HER2⁻ samples.
- C) Heatmap showing expression of cancer related genes in matched pre-treatment and residual disease TNBC samples.
