Table S2. Multivariate statistical comparison of microbial communities by a) impacts of age for each independent body site and b) differences across body sites for each unique age group (PERMANOVA, 999 permutations)

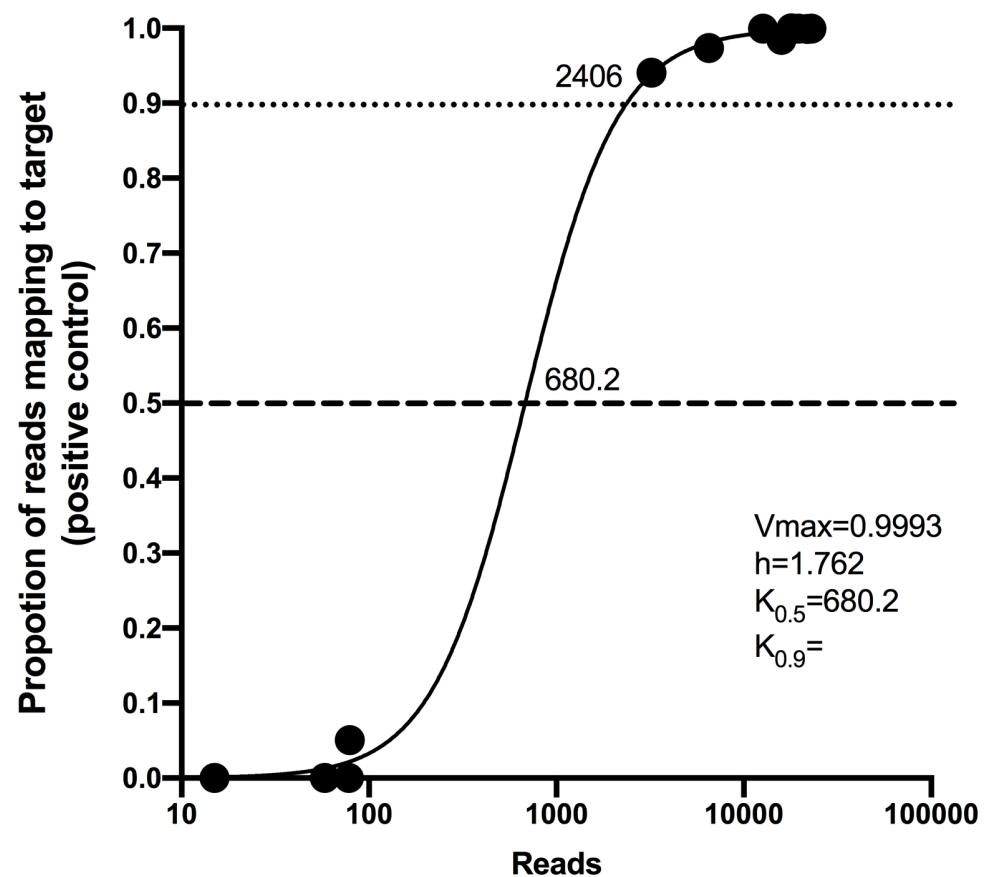

| a | UniFrac | Filtered_group | test_group | n | P | F |
|-------|---------|----------------|-------------|----|-------|-------|
| | unw | 43 dph | sample_type | 29 | 0.001 | 4.62 |
| | unw | 137 dph | sample_type | 26 | 0.023 | 1.29 |
| | unw | 430 dph tank | sample_type | 29 | 0.001 | 4.62 |
| | unw | 430 dph sea | sample_type | 53 | 0.001 | 6.67 |
| <hr/> | | | | | | |
| | w | 43 dph | sample_type | 29 | 0.001 | 5.57 |
| | w | 137 dph | sample_type | 26 | 0.003 | 3.11 |
| | w | 430 dph tank | sample_type | 29 | 0.001 | 18.39 |
| | w | 430 dph sea | sample_type | 53 | 0.001 | 32.29 |

| | | | | | | |
|---|-----|---------|-----------------|----|-------|-------|
| b | unw | Gill | ylk_tank_system | 44 | 0.001 | 5.90 |
| | unw | Skin | ylk_tank_system | 46 | 0.001 | 3.51 |
| | unw | Digesta | ylk_tank_system | 41 | 0.001 | 3.47 |
| | | | | | | |
| w | | Gill | ylk_tank_system | 44 | 0.001 | 14.53 |
| w | | Skin | ylk_tank_system | 46 | 0.001 | 7.72 |
| w | | Digesta | ylk_tank_system | 41 | 0.001 | 6.78 |

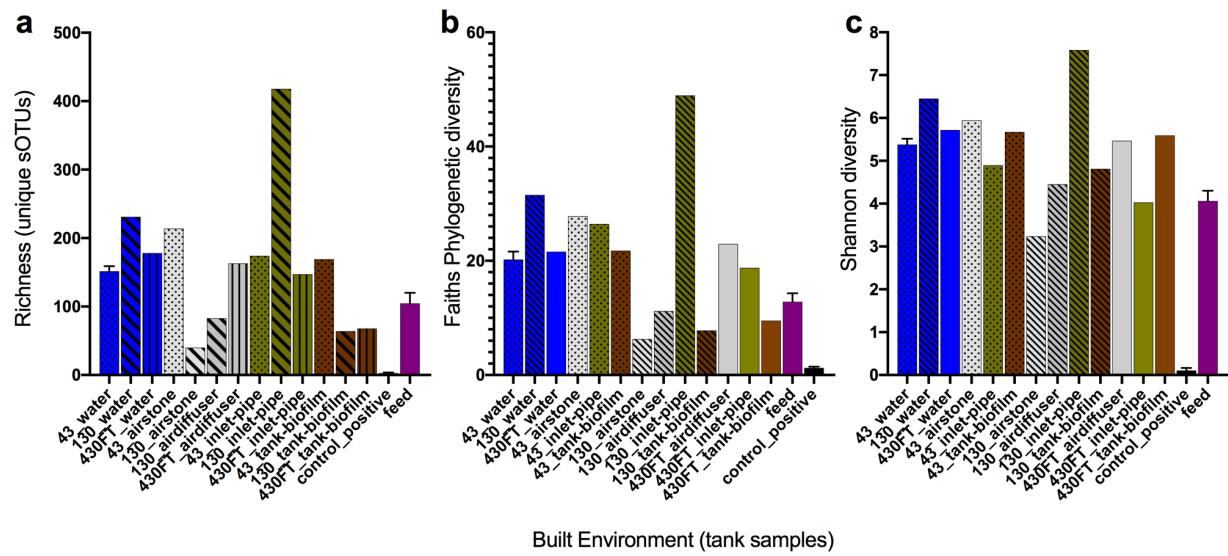

UniFrac: unweighted unifrac = 'unw', weighed normalized unifrac = 'w'

ylk_tank_system: 43 dph, 137 dph, 430 dph 'tank', 430 dph 'seapen'

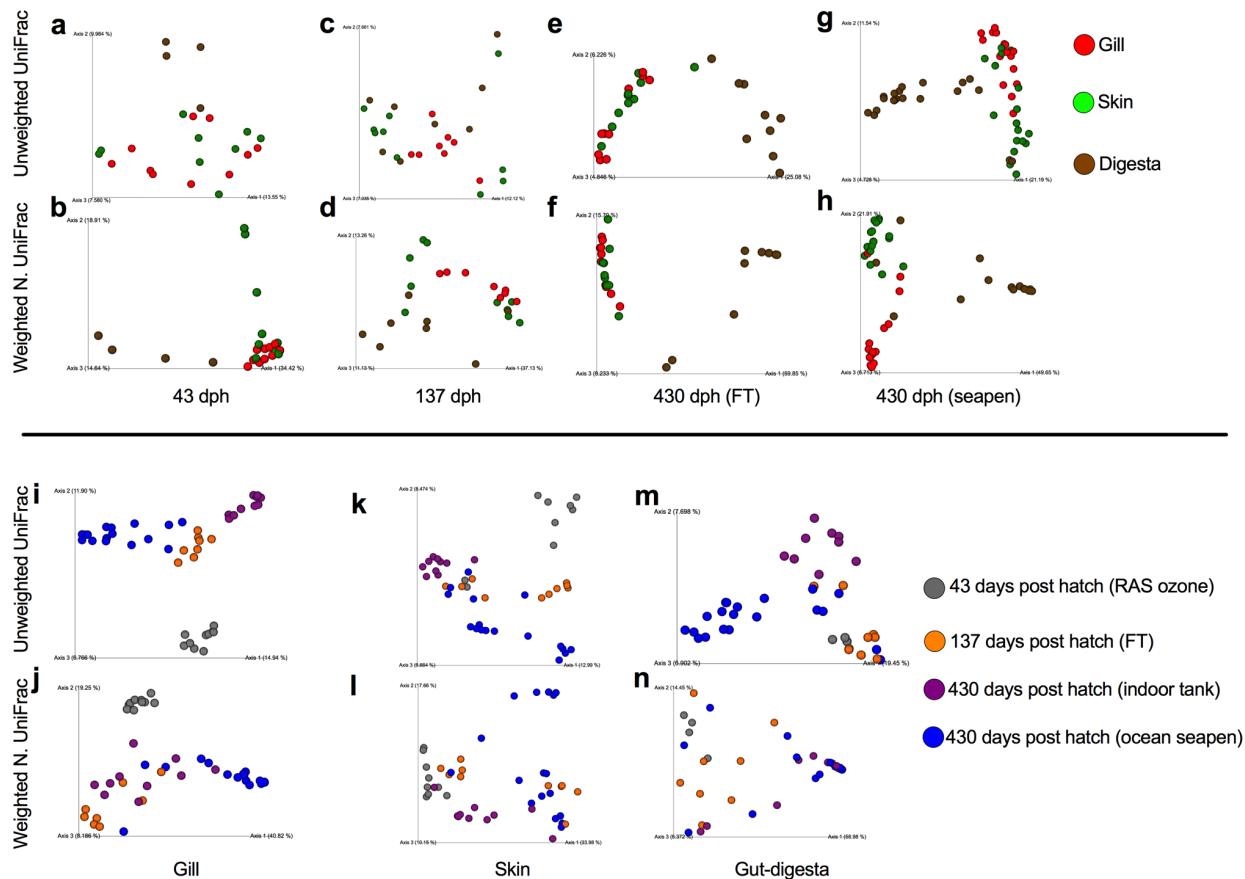

sample_type: fish gill, fish skin, fish gut

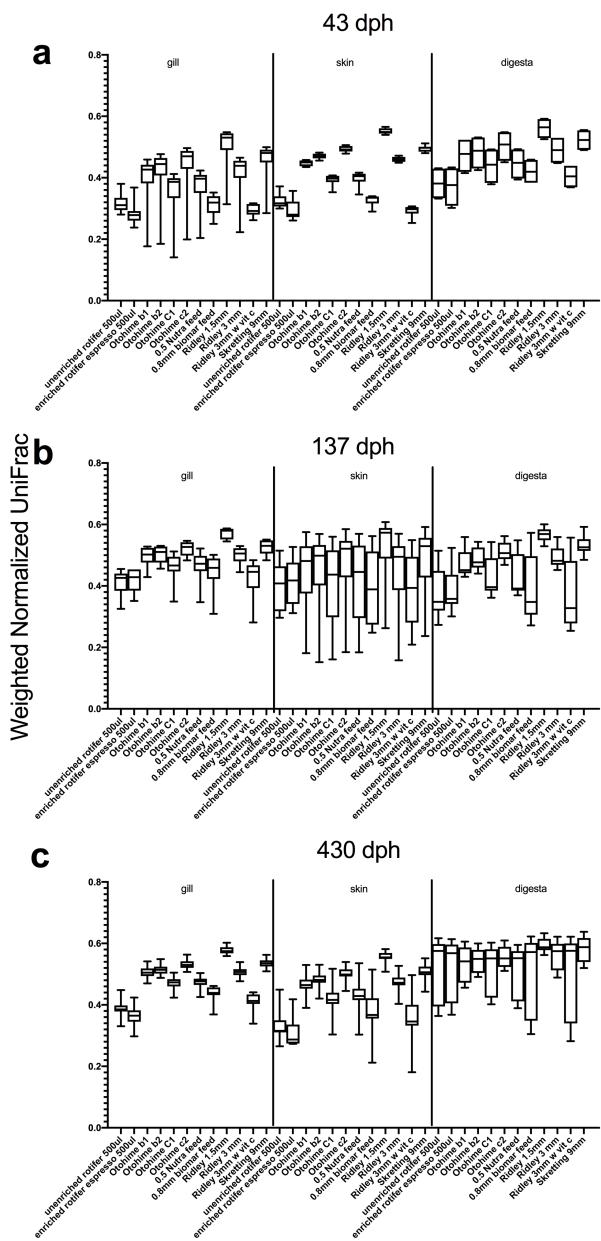

Supplementary Figure 1. Sample exclusion cutoff determination using Katharoseq method for limit of detection.

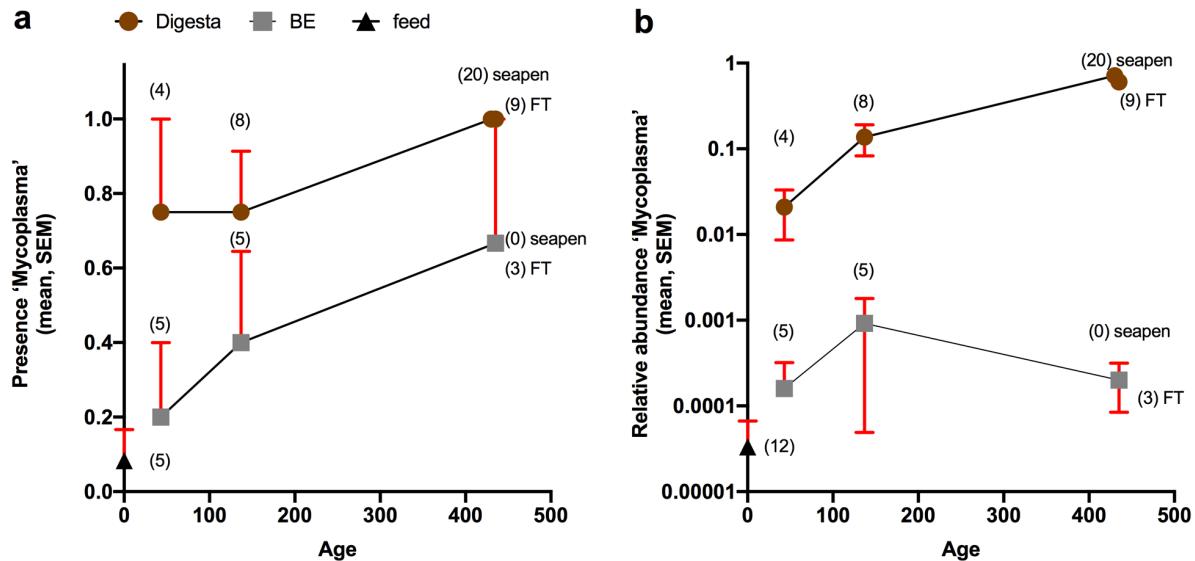

Supplementary Figure 2. Alpha diversity measures a) richness, b) Faith's Phylogenetic diversity, and c) Shannon across hatchery surfaces

Supplementary Figure 3. Beta diversity visualizations using PCoA plots of both Unweighted and Weighted Normalized UniFrac distances. Comparisons of microbial diversity across body sites using Unweighted and Weighted UniFrac distances (respectfully) independent for each age group: a) b) 43 dph; c) d) 137 dph; e) f) 430 dph indoor tank; g) h) 430 dph seapen. Comparisons of microbial diversity across rearing conditions or age using Unweighted and Weighted UniFrac distances grouped independently for body sites: i) j) gill; k) l) skin; m) n) digesta.

Supplementary Figure 4. Beta diversity comparisons (weighted normalized UniFrac) of fish mucosal sites (gill, skin, and digesta) to 12 different feeds used throughout the production process (order left to right from earliest feed to late feed). Each comparison conducted per age of fish: a) 43 dph, b) 137 dph, and c) 430 dph.

Supplementary Figure 5. Distribution of highly abundant 'unannotated' Mycoplasmataceae in digesta and built environment samples across fish age. A) Presence and B) relative abundance distribution of Mycoplasmataceae in fish and environment samples.
