Supplementary Table 2. Molecular identification of the 11 selected <i>Actinomyces</i> isolates based on 16S rRNA gene sequencing.....	22
Supplementary Table 3. Spearman correlation between soil physico-chemical parameters and total number of <i>Streptomyces</i> (TNS) in the three sites A, B and C.....	23
Supplementary Table 4. Resistance profile of multi-drug resistant clinical bacteria.....	24

## **1. General methods**

### **1.1 Recommended media for *Actinomyces* isolation**

M2: 10 g of starch, 0.3 g of casein, 2 g of KNO<sub>3</sub>, 2 g of NaCl, 0.05 g of MgSO<sub>4</sub>·7H<sub>2</sub>O, 2 g of K<sub>2</sub>HPO<sub>4</sub>, 0.02 g of CaCO<sub>3</sub>, 0.01 g of FeSO<sub>4</sub>·7H<sub>2</sub>O, 1 g of glucose, 15 g of agar, 1L distilled water, and pH adjusted at 7.2<sup>1</sup>.

GA: 10 g of Glucose, 0.5 g of asparagine, 0.5 g of K<sub>2</sub>HPO<sub>4</sub>, 15 g of agar, 1L distilled water, and pH adjusted at 6<sup>1</sup>.

GLM: 10 g of glucose, 3 g of yeast extract, 3 g of malate extract, 5 g of tryptone, 15 g of agar, 1L distilled water, and pH adjusted at 7.2<sup>2,3</sup>.

Bennett : 10 g of glucose, 2 g of yeast extract, 1 g of meat extract, 2 g of tryptone, 15 g of agar, 1L distilled water, and pH adjusted at 7.2<sup>4</sup>.

### **1.2 Recommended media for testing antimicrobial activity<sup>5</sup>**

ISP1: 3 g of yeast extract, 5 g of tryptone, 16 g of agar, 1L of distilled water, and pH adjusted at 7.15.

ISP2: 4 g of yeast extract, 4 g of glucose, 10 g of malate extract, 16 g of agar, 1L of distilled water, and pH adjusted at 6.51.

GYEA: 10 g of yeast extract, 10 g of glucose, 16 g of agar, 1L of distilled water, and pH adjusted at 6.96.

Bennett: 10 g of glucose, 2 g of yeast extract, 1 g of meat extract, 2 g of tryptone, 15 g of agar, 1L distilled water, and pH adjusted at 7.2.

### **1.3 Recommended medium for testing NaCl tolerance**

YEA medium: 3 g of yeast extract, 5 g of peptone, 15 g of agar, 1L of distilled water, and pH adjusted at 7.2.

### **1.4 Recommended medium for the production of melanoid pigment**

ISP9: 2.64 g of  $(\text{NH}_2) \text{SO}_4$ , 2.38 g of  $\text{KH}_2\text{PO}_4$ , 5.65 g of  $\text{K}_2\text{HPO}_4$ , 1 g of  $\text{MgSO}_4, 7\text{H}_2\text{O}$ , 20 g of agar, and 1L of distilled water.

100 mL salt solution: 4 g of  $\text{CuSO}_4, 5\text{H}_2\text{O}$ , 1.1 g of  $\text{FeSO}_4, 7\text{H}_2\text{O}$ , 7.9 g of  $\text{MnCl}_2, 4\text{H}_2\text{O}$ , 1.5 g of  $\text{ZnSO}_4, 7\text{H}_2\text{O}$ .

### **1.5 Other media used in this study**

PDA medium: 4 g of potato extract 20 g of glucose, 15 g of agar, 1L distilled water, and pH adjusted at 7.5.

Muller Hinton Agar medium: Ready to use

CLED medium: Ready to use.

## 2. Supplementary figures

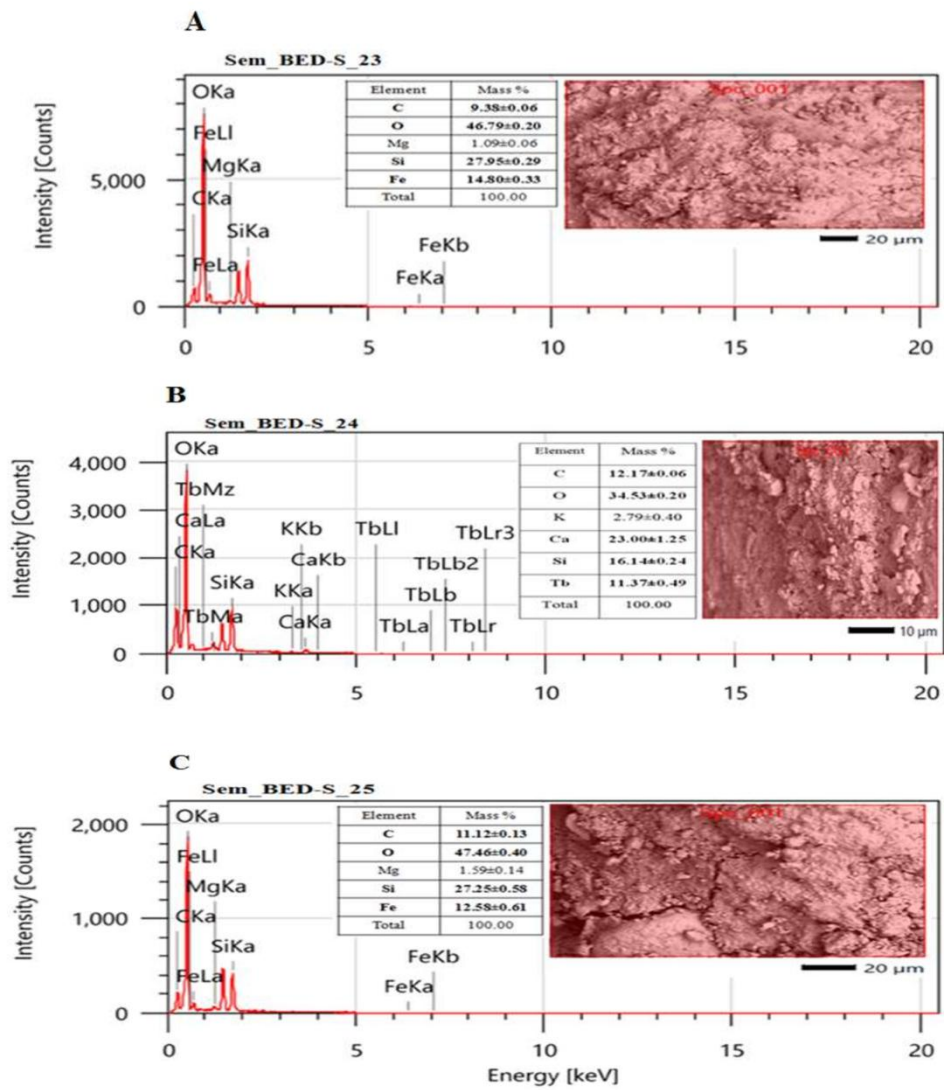

Figure S1. Analysis of minerals using scanning electron microscope (SEM).

Figure S2. Production kinetics of antibiotics against *Bacillus cereus* ATCC 14579.

*Streptomyces sp* strain  
E23-2 (OM883988)  
(x20)

*Streptomyces sp* strain  
E23-11(OM883994)  
(X20)

*Streptomyces sp* strain  
E25-11 (OM883997)  
(X20)

*Streptomyces bellus* strain  
E25-12 (OM883998)  
(X20)

*Streptomyces sp* Strain  
E23-4 (OM883990)  
(X20)

**Figure S3. Microscopic aspect of the most active *Streptomyces* (Gram staining).**

*Streptomyces* sp. strain E25-11 OM883997

*Streptomyces* sp. strain E23-2 OM883988

*Streptomyces* sp. strain E23-4 OM883990

*Streptomyces bellus* strain E25-12 OM883998

*Streptomyces* sp. strain E23-11 OM883994

**Figure S4.** Morphological aspect of the colonies of five isolates of active *Streptomyces*

**Figure S5. GC-MS of dichloromethane crude extract of E23-4 OM883990 strain with peaks indicating the presence of bioactive compounds (according to the NIST database).**

**Figure S6. Chemical structures of 21 secondary metabolites present in dichloromethane extract of E23-4 OM883990 strain analyzed by GC-MS.**

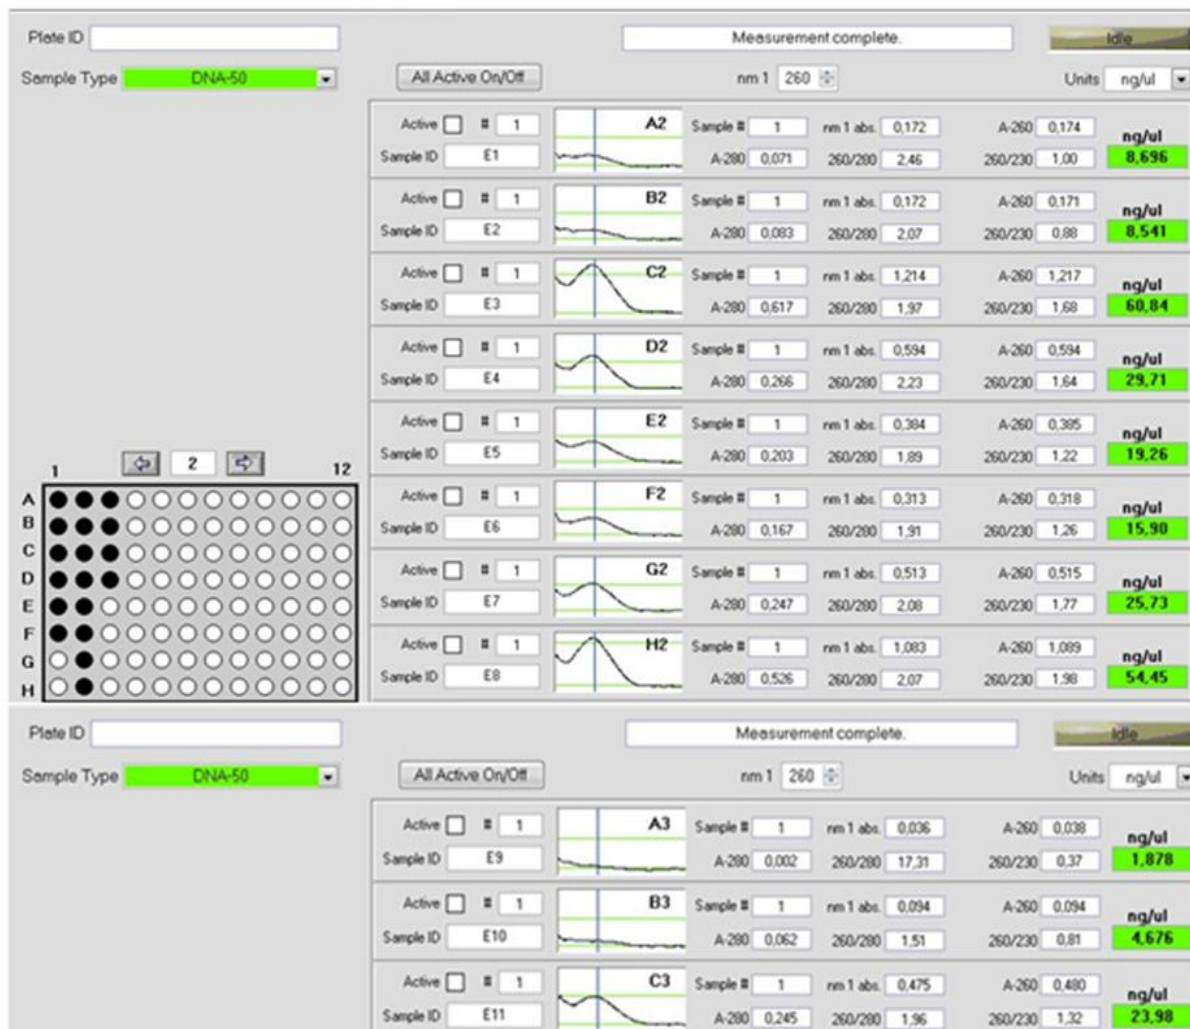

**Figure S7.** A map of the sampling sites retrieved from Google Maps (Google Maps. Map Data ©2022. Retrieved from <https://www.google.com/maps/@32.9937363,-7.6005892,15z>).

**Figure S8. *Actinomycetes* isolates obtained in the three studied (A, B and C) according to the culture media used.**

**Figure S9. Determination of the extracted DNA by Nanodrop 8000.**

The concentrations of the 11 samples are showed in the figure below.

**Figure S10. Agarose gel electrophoresis for amplification of genes coding for 16S rRNA of *Actinomyces* strains.**

Bands were fractionated by electrophoresis on a agarose gel (1 %) and visualised by the photo documentation system " G Box ".

### 3. Supplementary tables

**Supplementary Table 1: Morphological characteristics of active *Streptomyces* isolates.**

Strains	Identification (Scientific Name)	NCBI GenBank accession number	Colony aspect	Surface (aerial mycelium)	Reverse (substrate mycelium)	Pigmentati on of the medium	Gram staining
E23-2	<i>Streptomyces</i> sp.	OM883988	Circular	Whitish, not powdery	yellowish, Orange	Absent	Gram-positive filaments
E23-3	<i>Streptomyces africans</i>	OM883989	Starry	Whitish, not powdery	yellowish	Absent	Gram-positive filaments
E23-4	<i>Streptomyces</i> sp.	OM883990	Circular	Brick	Brick	Brownish	Gram-positive filaments
E23-8	<i>Streptomyces</i> sp.	OM883991	Circular	Whitish, not powdery	yellowish, pale	Absent	Gram-positive filaments
E23-9	<i>Streptomyces galilaeus</i>	OM883992	Circular, Starry	Orange	Orange	Absent	Gram-positive filaments
E23-10	<i>Streptomyces bellus</i>	OM883993	Punctiform	Whitish, not powdery	yellowish, Orange	Absent	Gram-positive filaments
E23-11	<i>Streptomyces</i> sp.	OM883994	Circular, Starry	Beige	yellowish, pale	Absent	Gram-positive filaments
E24-9	<i>Streptomyces amritsarensis</i>	OM883995	Circular	Pinkish	Orange	Absent	Gram-positive filaments
E25-9	<i>Streptomyces</i> sp.	OM883996	Starry	Beige	yellowish, Orange	Absent	Gram-positive filaments
E25-11	<i>Streptomyces</i> sp.	OM883997	Starry	Beige	yellowish, Orange	Absent	Gram-positive filaments
E25-12	<i>Streptomyces bellus</i>	OM883998	Punctiform	Whitish, powdery	yellowish, Orange	Absent	Gram-positive filaments

**Supplementary Table 2: Molecular identification of the 11 selected *Actinomyces* isolates based on 16S rRNA gene sequencing.**

Isolate Name	Query Length (bp)	Nearest known species <sup>a</sup>	Max Score	Query Coverage (%)	E-value	Percent identity (%)	Identification <sup>b</sup> (Scientific Name)	NCBI GenBank accession number(s)

---

<sup>a</sup>NCBI's nucleotide BLAST program was used to find the closest match against the non-redundant reference RNA sequence database (refseqrna). The strain number, strain type (T), and GenBank accession number are all listed after the species name.

<sup>b</sup>Isolates with a greater percentage of identity than 98.7% <sup>6</sup> and only one closest match for the same identity characteristics are classified up to the species level.

To assess the reliability of a phylogenetic tree, MEGA provides the Bootstrap test. This test uses the bootstrap re-sampling strategy, so you need to enter the number of replicates. For a given data set, applicable tests and the phylogeny inference method are enabled. Neighbor joining has an additional test (Interior Branch), which requires the same input as bootstrap

**Supplementary Table 3: Spearman correlation between soil physico-chemical parameters and total number of *Streptomyces* (TNS) in the three stations A, B and C.**

	<b>Variables</b>	<b>Value-r (Spearman)</b>	<b>Significance P-value</b>
<b>1</b>	TNS VS Electrical conductivity	-0,800	Not significant
<b>2</b>	TNS VS pH	-0.200	Not significant
<b>3</b>	TNS VS Organic carbon	0.500	Not significant
<b>4</b>	TNS VS Organic matter	1.000**	P≤0.01
<b>5</b>	TNS VS Total nitrogen	1.000**	P≤0.01
<b>6</b>	TNS VS Clay texture	0.211	Not significant
<b>7</b>	TNS VS Sandy texture	0.500	Not significant
<b>8</b>	TNS VS Silty texture	0.400	Not significant
<b>9</b>	TNS VS Magnesium	0.400	Not significant
<b>10</b>	TNS VS Aluminum	0.500	Not significant
<b>11</b>	TNS VS Silicon	-0.500	Not significant
<b>12</b>	TNS VS Potassium	-0.500	Not significant
<b>13</b>	TNS VS Calcium	-0.400	Not significant
<b>14</b>	TNS VS Oxygen	0.400	Not significant
<b>15</b>	TNS VS Sulfur	-1.000**	P≤0.01
<b>16</b>	TNS VS Chlorine	-1.000**	P≤0.01
<b>17</b>	TNS VS Phosphorus	0.400	Not significant
