

Supplementary Figure 1. Restricted cubic spline curve of odds according to the change of HGS (kg·f) in males (A) and in females (B).

In males, the odds of intradialytic hypotension decreased when HGS was greater than 19.0 kg·f. The odds of intradialytic hypotension in females increased when HGS was less than 19.0 kg·f. The dotted line indicates a value of 19.0 kg·f.

HGS, handgrip strength.
