

**S1 Fig:** Correlation between different BNT162b2-induced antibodies and SARS-CoV-2 virus neutralizing titers. Horizontal dotted line represents the cut-off values of the ELISAs. The vertical dotted lines show the neutralization assay cut-off. (A) RBD IgGAM as sample/calibrator ratio (B) S1 IgG antibodies were measured quantitatively [BAU/ml] (C-D) IWV IgG and S1 IgA antibodies are depicted as sample/calibrator ratios.
