

### Average Expression of HML-2 proviruses in 2 GTEx Donors

### Supplemental Figure 1. Comparison of individual donors

This figure displays a heatmap of individual HML-2 expression from two female GTEx donors. Provirus expression is given in TPM for each provirus detected (10 in Donor 1 and 8 in Donor 2) for 22 body sites. Each provirus is labeled on the side with which donor it was measured in. This heatmap was made using data from S2\_Data.
