Supplemental Digital Content 5: Calibration Plot for Model 3

eFig 1. Calibration plot for Model 3. The five clusters represent the five risk groups defined by the ranges of predicted risks: <50th, 50–74th, 75–90th, 90–94th, 95–100th percentiles. Within each cluster, there are 6 dots representing six pairs of predicted and observed risks, calculated from 6 validation datasets.
