

Fig. S3. Representative Western Blot showing the controlled expression of PDC variants PDC-1 and PDC-458.

Entire cell extracts of strain PA ΔA expressing either strep-tagged PDC-1 or PDC-458 were used for Western blotting by using specific antibodies against strep-tag. Overnight bacterial cultures were induced with IPTG 10 μ M (+), 20 μ M (++) , or grown without IPTG (-). Cell extracts of PA ΔA transformed with the empty vector (EV) pMBLe or with no vector at all (ΔA) were used as negative controls.
