

Figure S1 - Growth rate of the *OAC1* deletion mutant

Maximum specific growth rate of *S. cerevisiae* CEN.PK113-7D (naïve reference strain) and the *OAC1* deletion mutant, *S. cerevisiae* IMK588, tested in shake flasks on selective SMD medium. Growth rates represent the average and standard deviation of two biological duplicates. * IMK588 had a 26% slower growth rate with respect to CEN.PK113-7D (two-tailed paired homoscedastic t-test $p < 0.05$).
