Analysis of copy number variation in men with non-obstructive azoospermia

M. J. Wyrwoll^{1#}, R. Wabschke^{1#}, A. Röpke², M. Wöste³, C. Ruckert², S. Perrey⁴, N. Rotte¹, J. Hardy⁵, L. Astica⁶, D. G. Lupiáñez⁶, J. Wistuba⁷, B. Westernströer⁷, S. Schlatt⁷, A. J. Berman⁸, A. M. Müller⁹, S. Kliesch⁷, A. N. Yatsenko⁵, F. Tüttelmann¹, C. Friedrich^{1*}

Study cohort

We included data from our previous study¹ that was analysed with the same laboratory workup and a comparable resolution of the arrays.

Control men derived from Tüttelmann *et al.*, 2011¹:

M370, M385, M419, M420, M422, M424, M443, M447, M449, M484, M485, M492, M494, M495, M590, M599, M622, M670, M671, M672, M676

Men with Sertoli cell-only phenotype derived from Tüttelmann *et al.*, 2011¹:

M12, M15, M30, M94, M126, M159, M173, M177, M185, M187, M188, M226, M245, M248, M263, M267, M291, M301, M310, M319, M324, M352, M354, M364, M371, M374, M396, M432, M433, M464, M490, M499, M550, M567, M578, M609, M666

SNP-array

SNP-array was conducted to confirm deletions which were primarily detected via CNV calling from exome sequencing data. The Infinium CytoSNP-850k-Bead Array (Illumina, San Diego, California, USA) with a median probe spacing of 1.8 kb was used. 200 ng of DNA from each proband was amplified and fragmented. Next, DNA fragments were hybridized against oligonucleotides on the BeadChip (Illumina, San Diego, California, USA), distributed over the whole human genome. Subsequently single-base extension was carried out and staining of DNA was performed. All steps were carried out according to the manufacturer's protocol. Scanning of the BeadChips was done with a NextSeq 550 (Illumina, San Diego, California, USA). The BlueFuse Multi software (Illumina, San Diego, California, USA) was used for analyses. Signals larger than 10 adjacent probes were considered to be a genomic CNV.

Infertility-associated genes (Reviewed in Houston *et al.*, 2021²)

ABCA1, ADCY10, ADGRG2, AK7, AKAP4, ALX4, AMH, AMHR2, ANOS1, APOA1, AR, ARL2BP, ARMC2, AURKC, BCORL1, BMP4, BMP7, BNC2, BRAF, BRDT, BSCL2, C2CD6, C7orf61, CATIP, CATSPER1, CATSPER2, CATSPERE, CCDC103, CCDC141, CCDC39, CCDC40, CCDC62, CCDC9, CCIN, CDC14A, CEP112, CEP135, CEP290, CEP78, CFAP251, CFAP300, CFAP43, CFAP44, CFAP65, CFAP69, CFAP70, CFAP91, CFTR, CHD7, CLDN2, CYP11A1, CYP11B1, CYP17A1, CYP19A1, CYP21A2, DCC, DHH, DHX37, DMC1, DMRT1, DNAAF2, DNAAF4, DNAAF5, DNAAF6, DNAH1, DNAH11, DNAH17, DNAH2, DNAH6, DNAH9, DNAI1, DNAI2, DNAJB13, DNMT1, DPY19L2, DRC1, DUSP6, DZIP1, E2F1, EIF4G1, ERBB4, ESR1, FAM47C, FANCA, FANCM, FBXO43, FEZF1, FGF17, FGF8, FGFR1,

FLNA, FSHB, FSHR, FSIP2, GALNTL5, GAS8, GATA4, GFPT2, GGN, GH1, GLI3, GNRH1, GNRHR, H2BW1, HAUS7, HESX1, HOXD13, HS6ST1, HSD17B3, HSD3B2, HSF2, HYDIN, IFT140, IGSF10, IL17RD, INSL3, KASH5, KDM3A, KISS1R, KLHL10, LHB, LHCGR, LHX3, LRRC6, M1AP, MAGEB4, MAMLD1, MAP2K2, MAP3K1, MAP7D3, MC4R, MCM9, MEI1, MEIOB, MLH3, MNS1, MTOR, MYRF, NANOS1, NANOS2, NDNF, NLRP3, NNT, NOS1, NOTCH1, NR0B1, NR5A1, NRAS, NSMF, OFD1, PANK2, PDHA2, PIWIL2, PKD1, PLCZ1, PLK4, PLXNA1, PMFBP1, POU1F1, PPP2R3C, PROK2, PROP1, PSMC3IP, QRICH2, RAF1, RBMLXL2, RELN, RNF212, RNF220, RPL10L, RSPH1, RSPH3, RSPH9, RSPO1, RXFP2, SCAPER, SECISBP2, SEMA3A, SEPTIN12, SLC26A3, SOS1, SOX10, SOX2, SOX3, SOX8, SOX9, SPAG17, SPAG6, SPATA16, SPEF2, SPINK2, SPO11, SRA1, SRD5A2, SRY, STAG3, STAR, STK36, STX2, SUN5, SYCE1, SYCP2, SYCP3, TAC3, TACR3, TAF4B, TDRD6, TDRD7, TDRD9, TEX11, TEX14, TEX15, TRIM37, TSGA10, TTC12, TTC21A, TTC29, TTLL5, UBE2B, UBR2, USP26, VAMP7, WDR11, WDR19, WNK3, WT1, XRCC2, ZFX, ZMYND15, ZPBP

Table S1: Descriptive statistics of clinical data of all 252 men analysed by aCGH.

	<u>All (252)</u>	<u>MeiA (37)</u>	<u>SCO (194)</u>	<u>Controls (21)</u>
<u>Age [y]</u>	<u>33</u> <u>(26 - 43)</u>	<u>33</u> <u>(23 - 44)</u>	<u>33</u> <u>(26 - 42)</u>	<u>35</u> <u>(28 - 49)</u>
<u>Bi-testicular volume [mL]</u>	<u>23</u> <u>(9 - 54)</u>	<u>18</u> <u>(9 - 53)</u>	<u>22</u> <u>(9 - 43)</u>	<u>52</u> <u>(23 - 94)</u>
<u>Serum FSH [U/L]</u>	<u>19.2</u> <u>(2.6 - 39.7)</u>	<u>19.4</u> <u>(2.0 - 36.0)</u>	<u>20.6</u> <u>(6.6 - 41.4)</u>	<u>3.1</u> <u>(1.4 - 9.3)</u>

<u>Origin</u>	<u>198 men of European origin</u>	<u>29 men of European origin</u>	<u>152 men of European origin</u>	<u>20 men of European origin</u>

Data shown are the median values with the respective 95% confidence intervals.

Abbreviations: y: years, d: days, FSH: follicle stimulating hormone, LH: luteinising hormone, TESE: testicular sperm extraction. Data were not normally distributed and compared between the full cohort and subgroups by Kruskal-Wallis test with Dunn's post-hoc multiple comparison. Grey shaded parameters differed significantly comparing the control group with the other groups. Origin was determined based on self-reporting. All parameters were obtained at their first visit at the Centre of Reproductive Medicine and Andrology.

Reference values: Bi-testicular volume >24 mL, semen volume: 1.5 mL, semen pH: 7.2-8.0, semen fructose >13 µmol/sample, serum FSH 1-7 U/L, serum LH 2-10 U/L, serum testosterone >12 nmol/L.

Abbreviations: FSH: follicle stimulating hormone (IU/L), LH: luteinizing hormone (IU/L), NA: not available/applicable, T: testosterone (nmol/L), TV: testicular volume right/left (mL), y: years, TESE: testicular sperm extraction, SCO: Sertoli cell-only phenotype.

Reference values: FSH 1-7 IU/L, LH 2-10 IU/L, T >12 nmol/L, TV >12 mL per testis.

Table S8: ACMG-AMP criteria for *TEKT5* and *SLX4* variants (excel file).**Figure S1: SNP-array results demonstrating deletions affecting *SYCE1*.**

M2681 is affected by a heterozygous deletion (A) as well as a missense variant in *SYCE1* on the second allele. M3187 is affected by a homozygous deletion covering *SYCE1* (B).

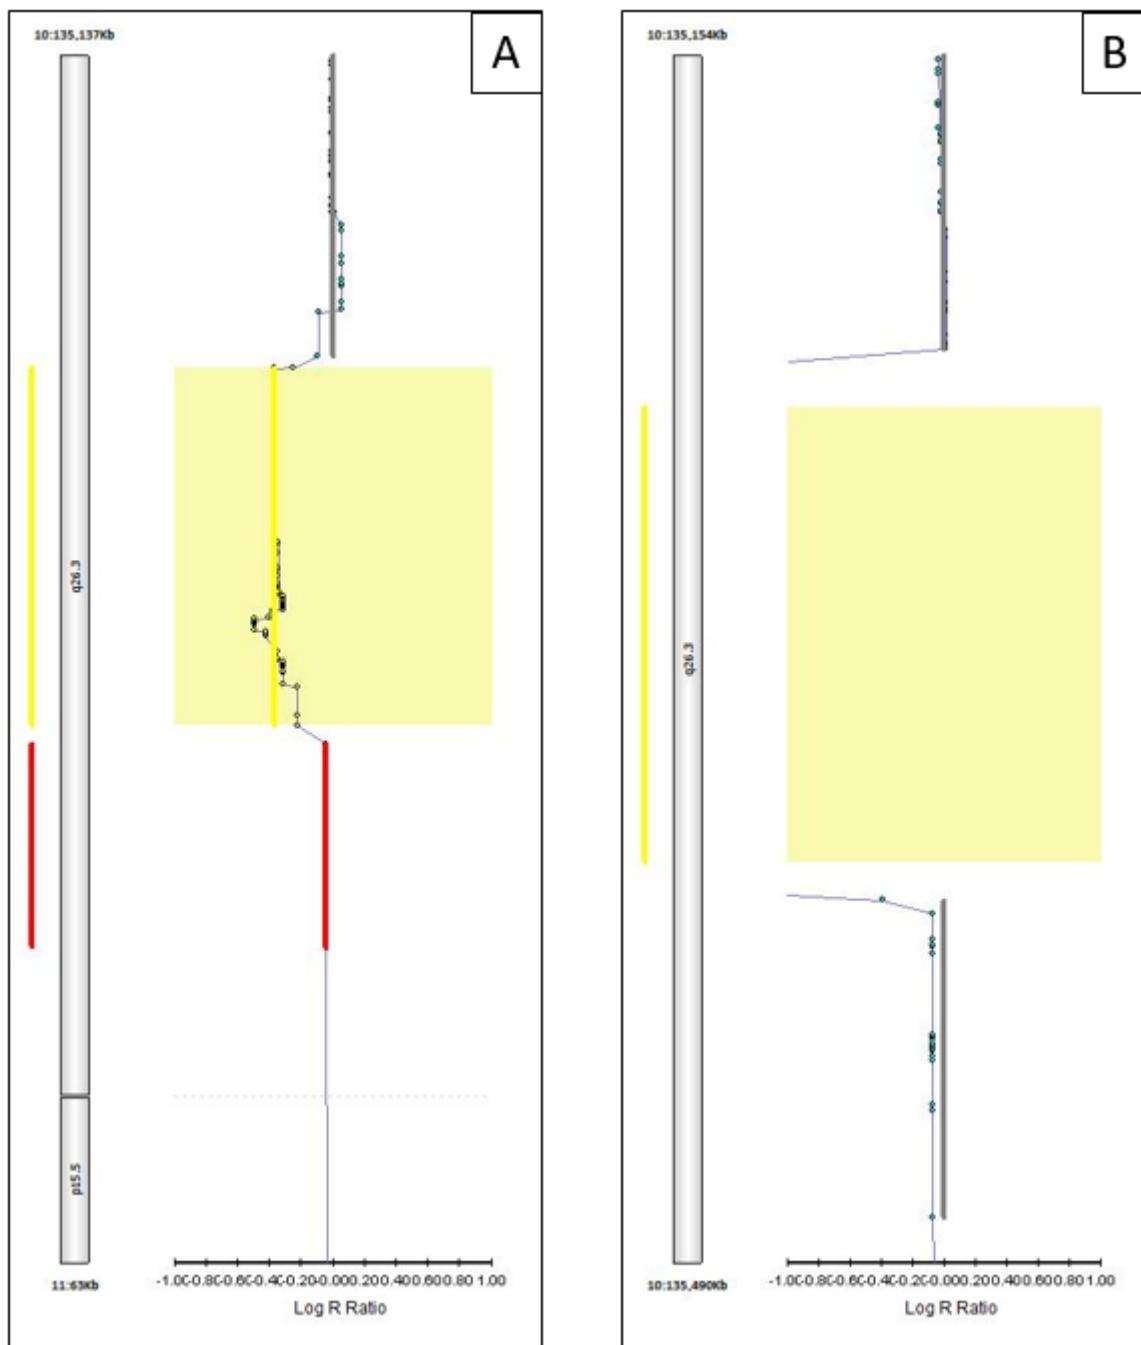

Figure S2: Electropherograms of the *TEKT5* variants in M1767 and his mother.

M1767 was identified with two heterozygous *TEKT5* variants: c.263G>A and c.1022C>T. The mother carries only the variant c.263G>A while the other variant was not present, suggesting compound-heterozygosity of both variants in M1767. DNA from the father of M1767 was not available.

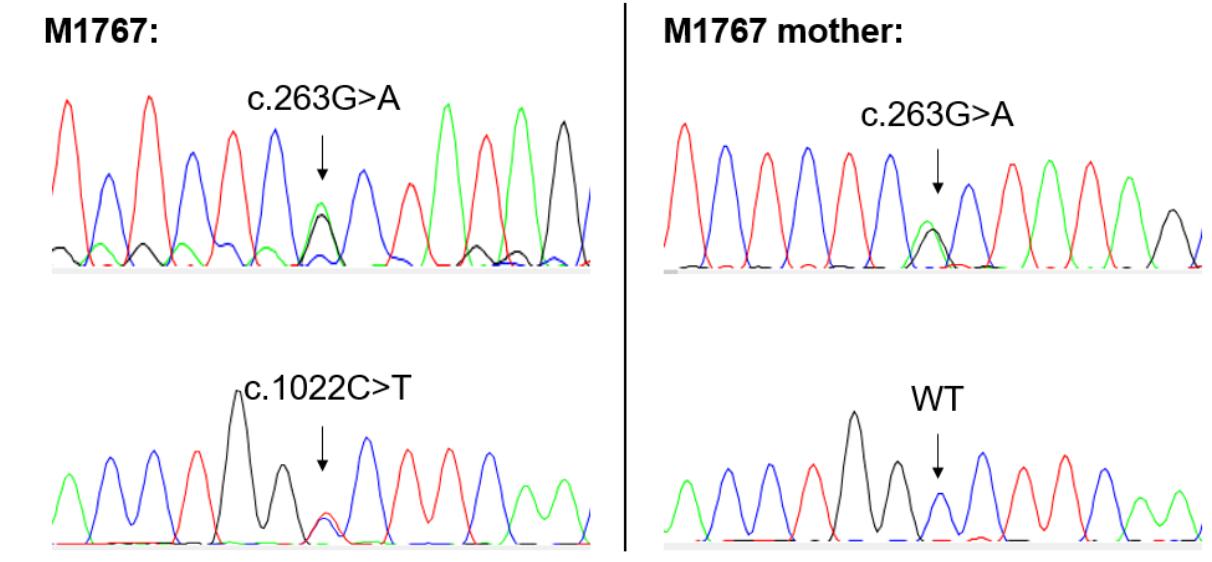

Figure S13: Prevalence of all CNVs, deletions and duplications.

The prevalence of all CNVs as well as deletions and duplications detected in 21 men from the control group was compared to the prevalence of those detected in 37 men with MeiA and 194 men with SCOS. There were significantly more CNVs detected in the control group compared to men with MeiA. All other statistical tests did not reveal significant differences.

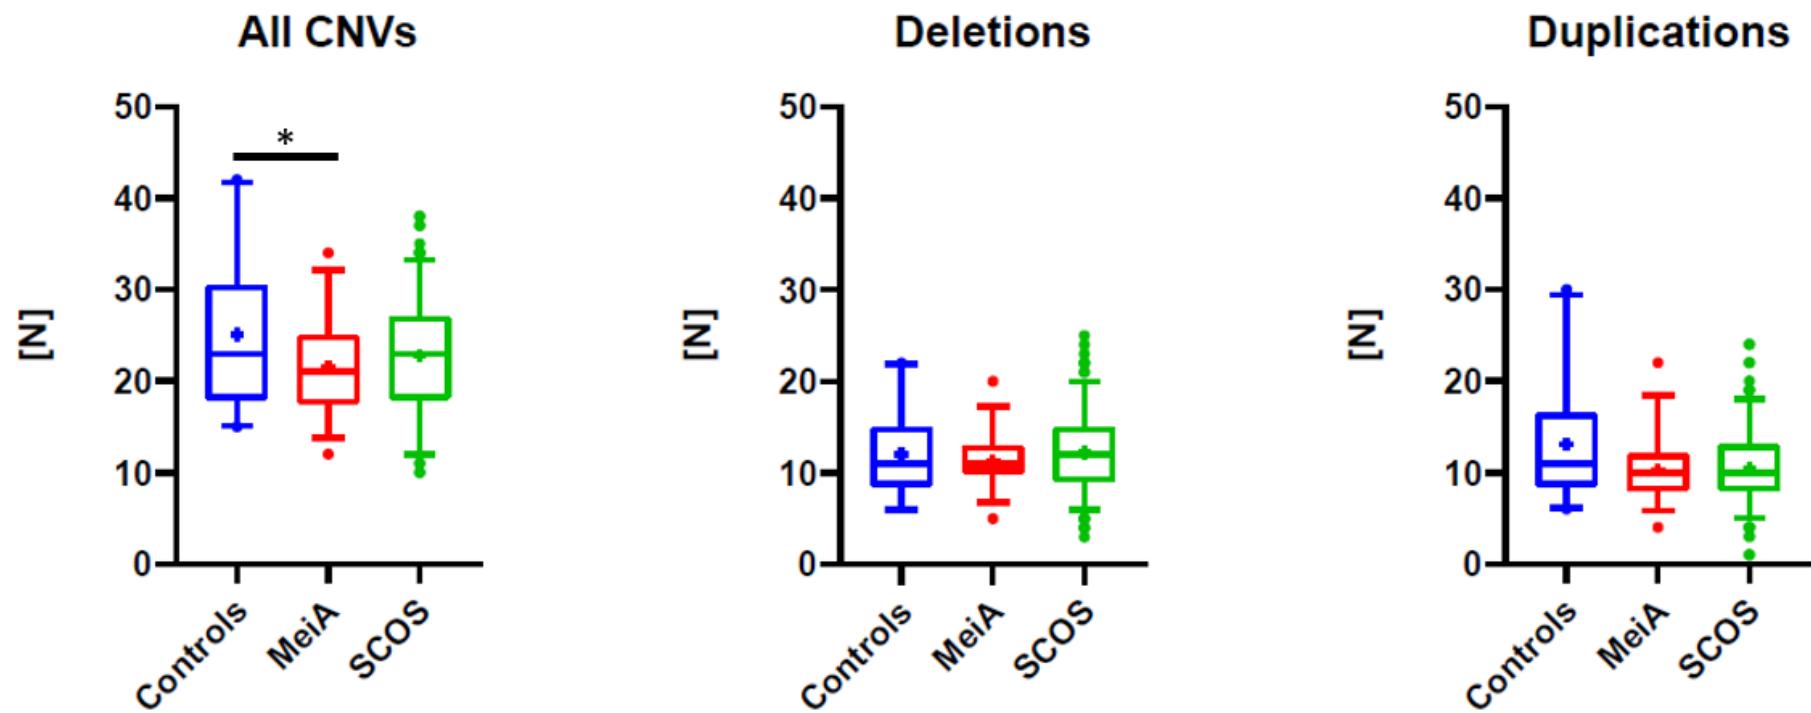

Figure S24: Chromosomal distribution of deletions and duplications.

The distribution of duplications and deletions was calculated per chromosome and normalized to 100 men for control men, men with MeiA and men with SCOS. Positive values indicate duplications, while negative values indicate deletions.

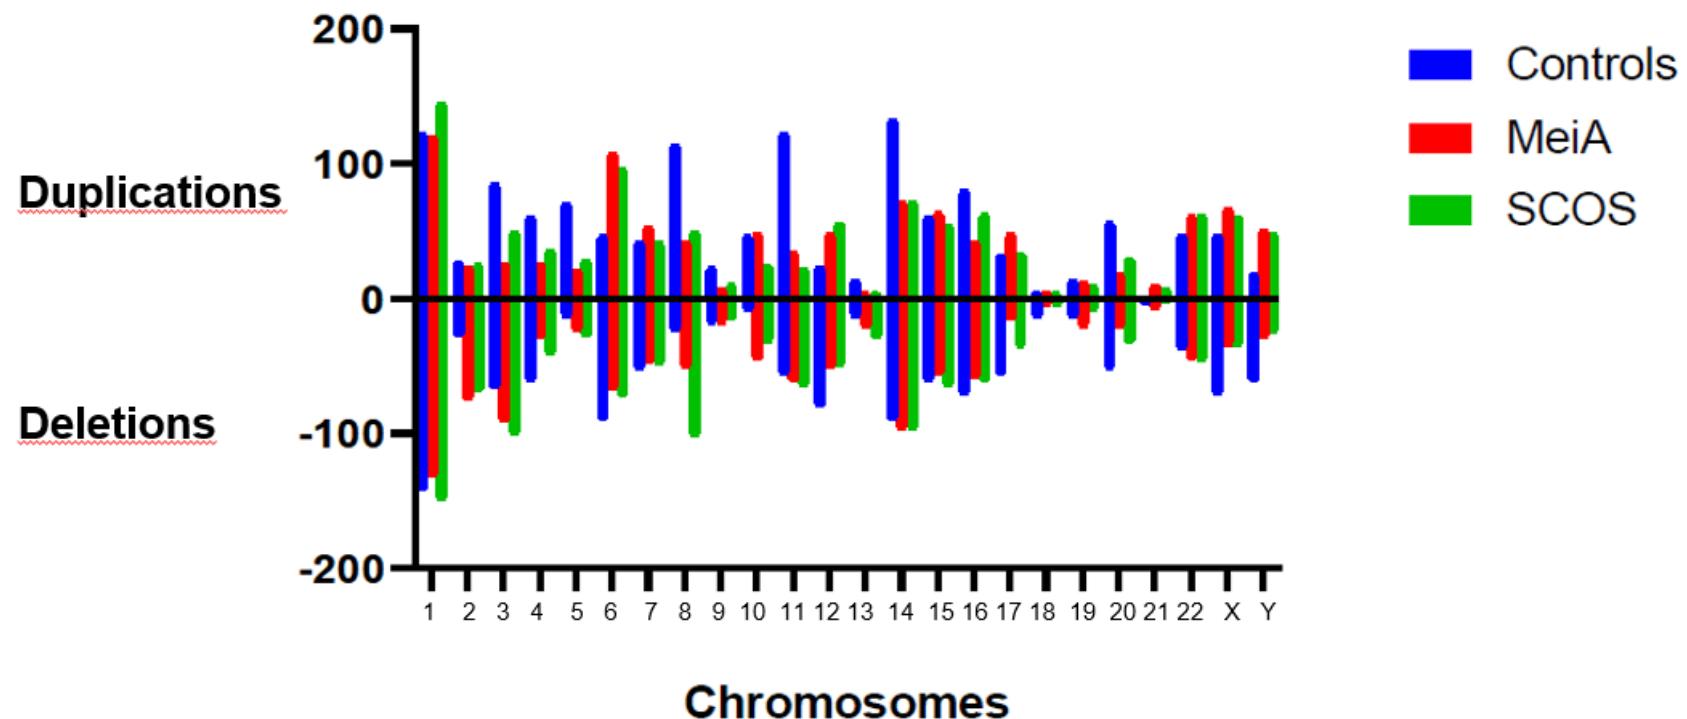

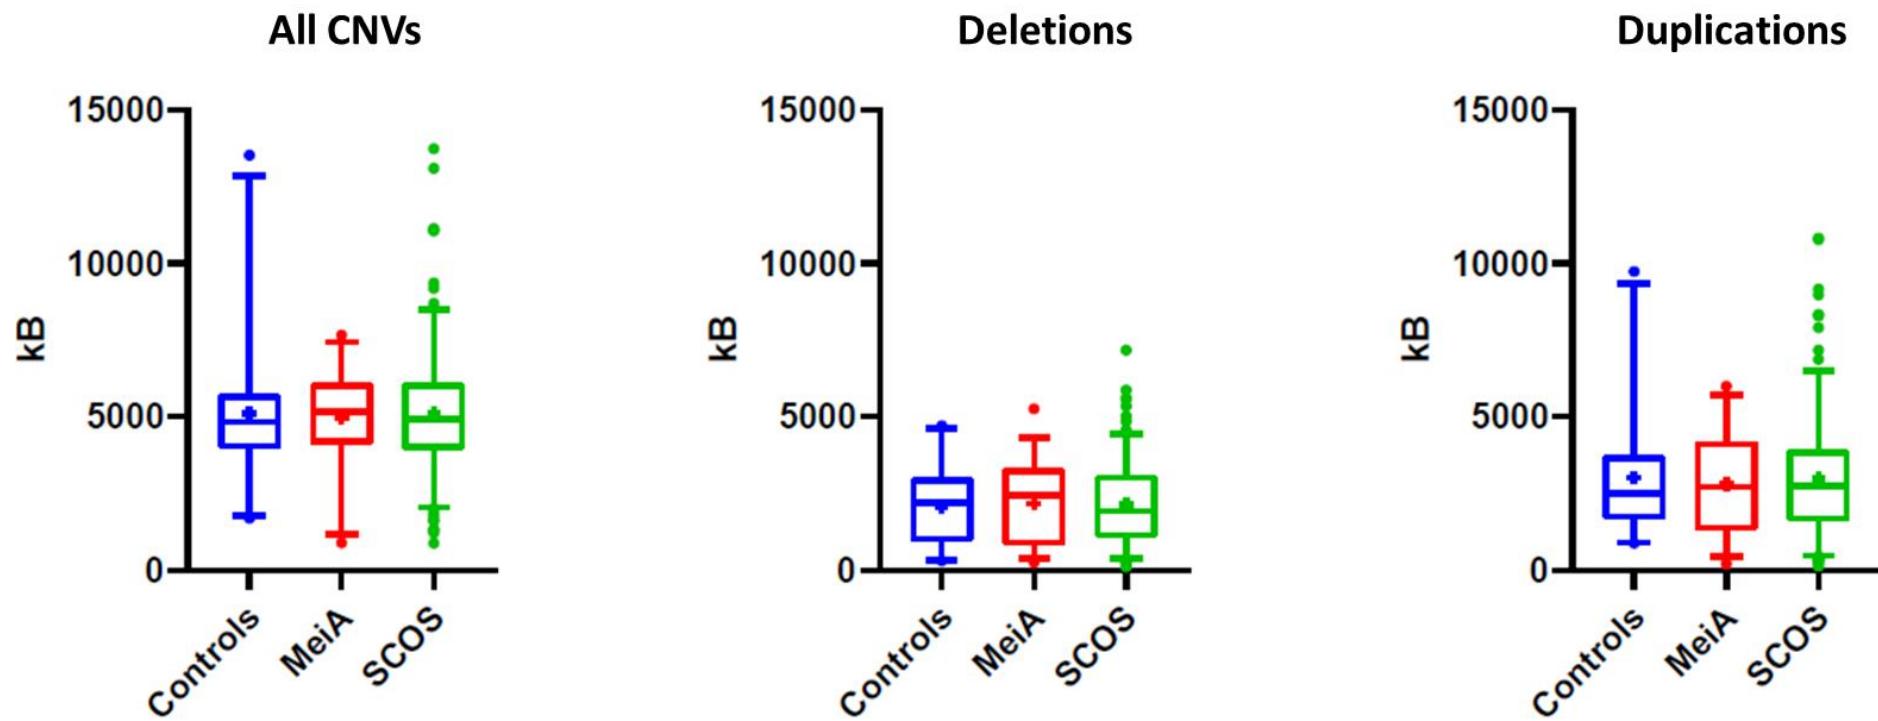

Figure S35: Size in kilo base pairs of CNVs, deletions and duplications.

The size of all CNVs as well as deletions and duplications detected in 21 men from the control group was compared to the size of those detected in 37 men with MeiA and 194 men with SCOS. There were no significant differences regarding the size of all CNVs, deletions or duplications between control men, men with MeiA and men with SCOS.
