

**Table. Supplemental Digital Content 1. Characteristics of 529 Participants in the Women's Interagency HIV Study**

<u>Characteristics</u>	<u>529 Women</u>
Age in number of years in 1995, mean, [Standard Deviation, SD]	36 [7.5 SD]
Ethnicity, Number of subjects in each group, (%)	
African American	322 (61%)
Hispanic	160 (30%)
White	31 (6%)
Other	16 (3%)
HIV transmission risk, Number of subjects (%)	
Heterosexual	244 (46%)
Injection drug use	149 (28%)
Transfusion	13 (3%)
Unknown	123 (23%)
Median HIV-1 RNA load at WIHS entry, (log <sub>10</sub> copies/mL) [Interquartile Range (IQR)]	4.38 [1.09 IQR]
Median CD4 cell count at WIHS entry, (cells/mm <sup>3</sup> ), [IQR]	303 [289 IQR]

Median CD4/CD8 cell ratio at WIHS entry, [IQR]	0.39 [0.35 IQR]
CCR5 $\Delta$ 32 genotype, Number of subjects (%) <sup>a</sup>	
Heterozygous	21 (4%)
Wild type	466 (96%)

<sup>a</sup>487 women in this investigation had their CCR5  $\Delta$ 32 genotypes determined as part of a WIHS-wide study of  $\Delta$ 32 genotypes [27].
