Supplementary Figure 2. Bacterial liquid PCR detection of pBI121-BcGRP23-GFP.

Note: Maeker: DL2000 ; 1~4: pBI121-BcGRP23-GFP; PC: positive control; H: negative control. The gel size is 444bp.

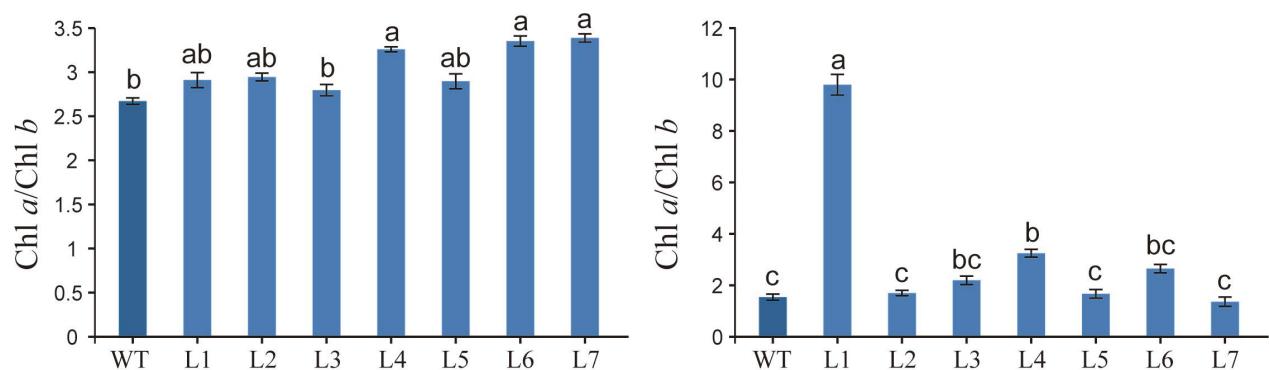

Supplementary Figure 3. Bacterial liquid PCR detection of pTRV2-BcGRP23.

Note: Maeker: DL2000; 1~6: pTRV2-BcGRP23; PC: positive control; WT: negative control; The gel band size is 300 bp.

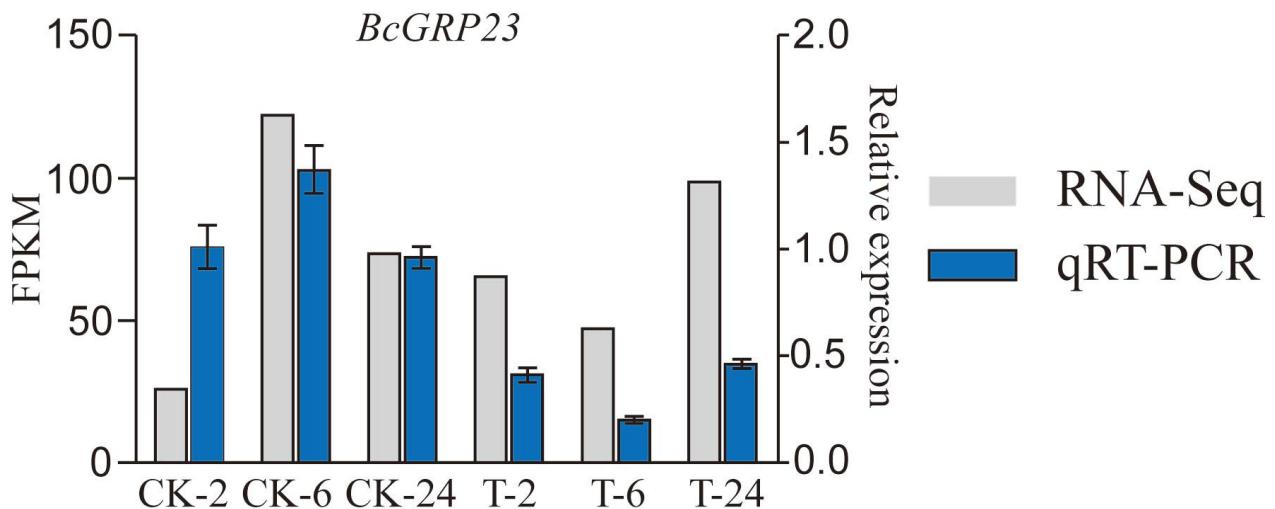

Supplementary Figure 4. Bacterial liquid PCR detection of CAMBIA1391-ProBcGRP23

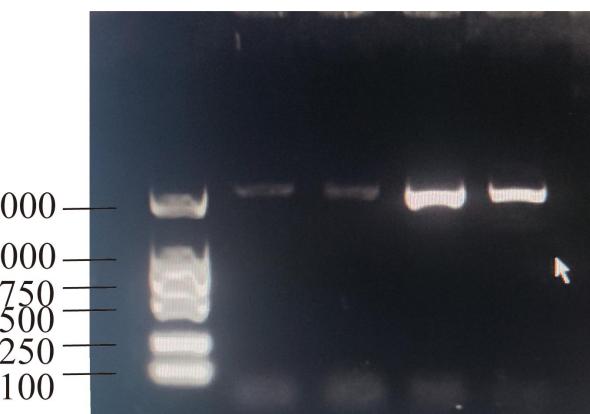

Note: Maeker: DL2000; 1~3: pCAMBIA1391-ProBcGRP23.

Supplementary Figure 5. The ratio of Chl *a* and Chl *b* (Chl *a/b*) in leaves (A) and petioles (B) of BcGRP23 knockdown lines. L1-L7 represent different BcGRP23 knockdown lines. Error bars represent standard errors. Different lowercase letters indicate significant differences at the $P < 0.05$ level.

Supplementary Figure 6. The expression level of *BcGRP23* gene after PCZ (Propiconazole) treatment (83.3 mg/L). The left Y axis represents RNA-Seq results and the right Y axis represents the results of qRT-PCR. T-2: after 2 hours of treatment; T-6: after 6 hours of treatment; T-24: after 24 hours of treatment.

Supplementary Figure 7. Bacterial liquid PCR detection of pABAI-*ProBcGRP23*. The correct band size is: 1350 bp + insert size.

Supplementary Table 1. Analysis of cis-acting elements in the *BcGRP23* promoter
