Supplementary Figure 2. Bias factor analysis for the strength of confounding my smoking under the null hypothesis of no relative excess risk of lung cancer in people living with HIV (PLWH) compared to the general population stratified by age group under scenarios of prevalence of smoking in the general population (columns) and PLWH (rows).

Grey dots are the observed SIR, dashed line is the null SIR (i.e. 1), black dots represent the strength of smoking on lung cancer risk under the null SIR.
