41 **Description of Presumptive Contamination Validation Process:**

42  
43 We used a manual validation process to assess whether known PFAS contamination sites were  
44 fully captured by our conceptual model. The PFAS Project Lab at Northeastern University  
45 maintains a publicly available database of known PFAS contamination sites,<sup>60,61</sup> though as we  
46 discussed in the full paper, known sites severely underrepresent PFAS contamination. To be  
47 conservative in our validation process, our validation process oversampled locations with more  
48 PFAS testing. We expected that these locations would be more likely to uncover atypical sites of  
49 contamination, decreasing our model's predictive accuracy, since a state with no systematic  
50 PFAS testing might only have data on airports or DOD facilities, rather than industrial or waste-  
51 related sites.

52  
53 We selected the five states with the highest numbers of known contamination sites (CA, ME, MI,  
54 NH, and VT) and the five states closest to the median number of known contamination sites  
55 (MN, MS, RI, TN, WA). Within each state, we selected the two counties with the highest  
56 number of known contamination sites and the two counties closest to the median number of  
57 known contamination sites.

58  
59 Using information about known contamination sites in the resulting 40 counties, we searched the  
60 presumptive contamination map and associated CSV file for matching sites.<sup>60</sup> If a matching site  
61 was not readily visible, we compared facility names and searched publicly available information  
62 for updates to business names or historical use data. We calculated three accuracy measurements  
63 in our validation process: the percent of known contamination sites that were observable in the  
64 map of presumptive contamination sites (*observed*); the percent of known contamination sites

65 that were included in our conceptual model but were not included in the map (*expected*); and the  
66 total percent of known contamination sites either in our map or, while not mapped, our  
67 conceptual model (*total*).

68

69 We would not expect 100% of known contamination sites to be included for several reasons.

70 First, our presumptive contamination model is informed by prior research consensus of sites that  
71 are *most likely* to be contaminated, because it is designed to be sufficiently conservative to be  
72 useful in the prioritization of future testing; thus potential contamination sites that are *possible*  
73 but not *probable* are excluded. Second, the source of PFAS contamination is not always known,  
74 so it may be unknown whether PFAS contamination at a certain site is ultimately traceable to one  
75 of our three general categories.

76

**Table S-1. NAICS codes included in presumptive contamination model**

NAICS code	title	sources	number of facilities
313320	Fabric Coating Mills	bcdefghik	380
325510	Paint and Coating Manufacturing	abcdefghik	2100
322220	Paper Bag and Coated and Treated Paper Manufacturing	bcdefghi	0
313210	Broadwoven Fabric Mills	bcdefhk	484
322121	Paper (except Newsprint) Mills	bcdefhk	610
332813	Electroplating, Plating, Polishing, Anodizing, and Coloring	bcdefhi	5642
324110	Petroleum Refineries	abcdehk	594
325612	Polish and Other Sanitation Good Manufacturing	abdefhk	673
334413	Semiconductor and Related Device Manufacturing	bcdefi	1552
326113	Unlaminated Plastics Film and Sheet (except Packaging) Manufacturing	bdefhi	597
332812	Metal Coating, Engraving (except Jewelry and Silverware), and Allied Services to Manufacturers	bcefgi	3587
333318	Other Commercial and Service Industry Machinery Manufacturing	bdefgh	0
334419	Other Electronic Component Manufacturing	bcdefg	1663
562212	Solid Waste Landfill	cdefjk	4765
325199	All Other Basic Organic Chemical Manufacturing	abdefi	1847
323111	Commercial Printing (except Screen and Books)	bcdhk	4226
313110	Fiber, Yarn, and Thread Mills	bcefh	0

324191	Petroleum Lubricating Oil and Grease Manufacturing	abcdh	919
325998	All Other Miscellaneous Chemical Product and Preparation Manufacturing	aefgk	2598
562211	Hazardous Waste Treatment and Disposal	acefj	1357
562213	Solid Waste Combustors and Incinerators	acefj	407
313310	Textile and Fabric Finishing Mills	bcdh	0
322219	Other Paperboard Container Manufacturing	bcdh	0
323120	Support Activities for Printing	bcdh	0
313220	Narrow Fabric Mills and Schiffli Machine Embroidery	cefk	0
313230	Nonwoven Fabric Mills	bchk	239
322130	Paperboard Mills	cefk	258

332999	All Other Miscellaneous Fabricated Metal Product Manufacturing	bdgh	4799
424690	Other Chemical and Allied Products Merchant Wholesalers	bdhj	1698
314910	Textile Bag and Canvas Mills	befi	0
326112	Plastics Packaging Film and Sheet (including Laminated) Manufacturing	defi	350
335999	All Other Miscellaneous Electrical Equipment and Component Manufacturing	befg	877
562112	Hazardous Waste Collection	cefj	2561
562219	Other Nonhazardous Waste Treatment and Disposal	cefj	744
325611	Soap and Other Detergent Manufacturing	abeh	1012

The use of NAICS codes to identify potential industrial PFAS dischargers has been suggested by several regulatory agencies and academic researchers. This table lists the NAICS codes identified by at least four of the following sources\*:<sup>†, ‡</sup>; a:<sup>52</sup>; b:<sup>36</sup>; c:<sup>17</sup>; d:<sup>37</sup>; e:<sup>38</sup> f:<sup>35</sup> g:<sup>39</sup>; h:<sup>40</sup>; i:<sup>41</sup>; j:<sup>42</sup>; k:<sup>43</sup>.

\* We removed NAICS code 488119 (Other Airport Operations) because AFFF-certified airports are included in the *Major Airports (FAA Part 139)* dataset, to avoid double-counting these facilities.

† NAICS codes 322220, 333318, 313110, 313310, 322219, 323120, 313220, and 314910 returned no facility results in the FRS EZ Query. The EPA’s Enforcement and Compliance History Online (ECHO) database is another tool to download facilities from NAICS codes, but it does not include a location accuracy. The ECHO database returned 2,109 facilities from these seven NAICS codes.<sup>74</sup>

‡ The Massachusetts Science Advisory Board identified some facilities by Standard Industrial Classification (SIC) codes, which were converted to NAICS using a SIC to NAICS crosswalk.<sup>75</sup>

**Model Validation discussion:** New Hampshire's robust PFAS testing has identified 469 known contamination sites, while our model identifies only 380 presumptive sites. Excluding New Hampshire's known sites from our validation process increases our model's total accuracy to 83% (Table S-5). New Hampshire sites with PFAS detections not captured by our model include many types of facilities not generally associated with PFAS contamination, such as retail establishments, country clubs, pizza parlors, and convenience stores.

**Table S-5. Presumptive contamination model validation, county level analysis, excluding New Hampshire**
