

Supplementary Figure 5. Anti-tumor phenotype in ApoE deficient animals is rescued upon T cell depletion. (A) Representative SPADE plots of defining marker for identified cell populations. High expression in red. Low expression in blue. **(B)** Manual gating quantitation of fibroblasts (CD45⁻ PDGFR α ⁺) in WT (n=4), WT anti-CD4/CD8 (n=2), ApoE^{-/-} (n=4), and ApoE^{-/-} anti-CD4/CD8 (n=5) tumors. Statistical significance was determined by two-tailed *t* tests between groups.
