

Descriptions of Additional Supplementary Files

Supplementary data file 1

RNA in situ hybridisation experiments were performed using RNAscope® technology, and in this file, the complete information including sequences on the design of paired double-Z oligonucleotide probes against target RNA using custom software is provided.

Supplementary data file 2

This table lists all information on the animals used in this study: species, strain, stage, size, number of animals used per experiment, type of experimental procedure and analysis, *etc.*
