

**Supplementary Fig 2**. The relationship between CX3CL1 and necroptosis, autophagy, and apoptosis. (A) 786-O cells were incubated with Necrostatin-1 (0, 5, 10, 15  $\mu$ M/ml) for 6, 12, and 24 h. Then cell viability was estimated using the CCK-8 assay. (B) 786-O cells were incubated with CQ (0, 5, 15, 25 and 35  $\mu$ M/ml) for 12, 24, and 48 h. Then cell viability was estimated using the CCK-8 assay. (C) 786-O cells were incubated with Z-VAD-FMK (0, 10, 20, and 30  $\mu$ M/ml) for 24, 48, and 72 h. Then cell viability was estimated using the CCK-8 assay. (D) Cell colonies of 786-O cells.
