

Supplementary Material

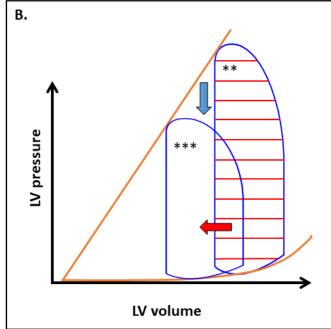

Supplementary Figure 1. Laboratory values during hospital stay of the patient

Abbreviations: glomerular filtration rate (GFR)

Supplementary Figure 2. Pressure-volume loops of the left ventricle during (concomitant) treatment with percutaneous mechanical circulatory support devices

A. Pressure—volume loops during normal cardiac activity as reference (*) and after initiation of VA-ECMO support (**). The blue arrow indicates an increase in wall stress and afterload by VA-ECMO; the shift of the pressure-volume loop to the right (red arrow) indicates increased energy demand.

B. Pressure—volume loop after insertion of Impella® micro-axial pump concomitant to VA-ECMO (***). The red arrow indicates left-ventricular unloading (i.e., reduced energy demand). The blue arrow indicates reduced afterload.

Abbreviations: left ventricle (LV); veno-arterial extracorporeal membrane oxygenation (VA-ECMO).
