Note: for each sample, which have AA substitution, the mutation genotypes are listed. Reference homozygous genotypes are omitted. Green background highlights these mutations conferring resistance are experimentally confirmed in previous studies. 1. SNP position across ALS gene sequence. 2.Reference genotype. 3. Alternative genotype. 4. Amino acid alteration due to this SNP mutation.

Supplemental Table S11. Significant different genotype frequency between weedy and wild samples. Fisher's exact test is used to test if genotypes on each polymorphic site are significant different between weedy and wild populations.

**Note:**

**Position:** SNP position on transcripts

**Ref SNP:** nucleotide on reference transcripts

**Alt SNP:** nucleotide on sample reads

**Ref homozygous genotype:** sample count with homozygous reference genotype (0/0)

**Heterozygous genotype:** sample count with heterozygous genotype (0/1)

**Alt homozygous genotype:** sample count with homozygous alternative genotype (1/1)

**Unknown genotype:** missing data

**Weedy Ref Allele:** sample count in weedy population with reference alleles (0)

**Weedy Alt Allele:** sample count in weedy population with alternative alleles (1)

**Wild Ref Allele:** sample count in wild population with reference alleles (0)

**Wild Alt Allele:** sample count in wild population with alternative alleles (1)
