

Title 1 Identify the study as developing and/or validating a multivariable prediction model, the target population, and the outcome to be predicted. Abstract 2 Provide a summary of objectives, study design, setting, participants, sample size, provide and other productors, outcome, statistical analysis, results, and conclusions. Historium of the medical context (including whether diagnostic or prognostic) and rationale for developing or validating the multivariable prediction model, including references to existing models. Source of data 4 Describe the study design or source of data (e.g., randomized trial, cohort, or registry data), separately for the development and validation data sets, if applicable. Participants 5 Specify the objectives, including whether the study describes the development or validation of the model or both. **To be participants 5 Specify the objectives, including whether the study describes the development or validation of the model or both. **To be participants 5 Specify the study design or source of data (e.g., randomized trial, cohort, or registry data), separately for the development and validation data sets, if applicable. **Specify key study dates, including start of accrual, end of accrual, and, if a specify design of the study describes and validation data sets, if applicable. **Specify key otherwars Suring (e.g., primary care, secondary care, specific describes the development of accrual, end of accrual, and, if a specific describes the development of accrual, and of accrual, and, if a specific describes the development of accrual, and of accrual, and, if a specific describes the development of accrual, and of accrual, and, if a specific describes and accrual and analysis and accrual analysis. **To be participants** **To be part	Section/Topic	Item	Checklist Item	Page

Source of data Sour	Background	3a	rationale for developing or validating the multivariable prediction model, including	2
Source of data As Describe the study design or source of data (e.g., randomized trial, cohort, or registry data), separately for the development and validation data sets, if applicable, and of follow-up. Specify the key study dates, including start of accrual, end of accrual; and, if applicable, end of follow-up. Specify key elements of the study setting (e.g., primary care, secondary care, general population) including number and location of centres. Specify key elements of the study setting (e.g., primary care, secondary care, general population) including number and location of centres. Specify key elements of the study setting (e.g., primary care, secondary care, general population) including number and location of centres. Specify define the outcome that is predicted by the prediction model, including how and whan discount to be predicted. 4		3b	Specify the objectives, including whether the study describes the development or	3
Source of data Aa Describe the study design or source of data (e.g., randomized trial, chort, or registry data), separately for the development and validation data sets, if applicable. 3	Methods			
Ab Specify the key study dates, including start or accruar; end or accruar; and, if applicable, and of follow-up times. Sample size Specify key elements of the study setting (e.g., primary care, secondary care, general population) including number and location of centres. So Describe eligibility criteria for participants. Size Give details of treatments received, if relevant. NA Clearly define the outcome that is predicted by the prediction model, including how and when assessed. Report any actions to blind assessment of the outcome to be predicted. Predictors Predictors Predictors Report any actions to blind assessment of predictors for the outcome and other predictors and one of the study size was arrived at. Sample size 8 Explain how the study size was arrived at. Describe how missing data were handled in the analyses. Statistical analysis methods Statistical analysis methods 10a Describe how predictors were handled in the analyses. Specify type of model, all model-building procedures (including any predictor selection), and method for internal validation. Results Participants Model		4a	registry data), separately for the development and validation data sets, if applicable.	3
Participants 5b Describe eligibility criteria for participants. 5c Give details of treatments received, if relevant. Clearly define the outcome that is predicted by the prediction model, including how and when assessed. Clearly define all predictors used in developing or validating the multivariable predictions. Predictors Predictors Predictors 8 Report any actions to blind assessment of the outcome to be predicted. 4 Clearly define all predictors used in developing or validating the multivariable prediction model, including how and when they were measured. Report any actions to blind assessment of predictors for the outcome and other predictors. Sample size 8 Explain how the study size was arrived at. Describe how missing data were handled (e.g., complete-case analysis, single imputation, multiple imputation) with details of any imputation method. Statistical analysis methods 10a Describe how predictors were handled in the analyses. Specify type of model, all model-building procedures (including any predictor selection), and method for internal validation. Participants 10a Describe the flow of participants through the study, including the number of participants with and without the outcome and, if applicable, a summary of the follow-up time. A diagram may be helpful. Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome. Model the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome. Model the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome. Present the full prediction model to allow predictions for individuals (i.e., all regression coefficients, and model intercept or baseline survival at a give		4b	applicable, end of follow-up.	3
Social details of treatments received, if relevant. NA	Participants		general population) including number and location of centres.	
Outcome 6a Clearly define the outcome that is predicted by the prediction model, including how and when assessed. 6b Report any actions to blind assessment of the outcome to be predicted. 7a Clearly define all predictors used in developing or validating the multivariable prediction model, including how and when they were measured. 7b Report any actions to blind assessment of predictors for the outcome and other predictors used in developing or validating the multivariable prediction model, including how and when they were measured. 8 Explain how the study size was arrived at. 8 Explain how the study size was arrived at. 8 Explain how the study size was arrived at. 9 Describe how missing data were handled (e.g., complete-case analysis, single imputation, multiple imputation, multiple imputation, multiple imputation, multiple imputation, and the details of any imputation method. 10a Describe how predictors were handled in the analyses. Specify type of model, all model-building procedures (including any predictor selection), and method for internal validation. 10d Specify all measures used to assess model performance and, if relevant, to compare multiple models. Risk groups 11 Provide details on how risk groups were created, if done. Results 12a Describe the flow of participants through the study, including the number of participants with and without the outcome and, if applicable, a summary of the follow-up time. A diagram may be helpful. 12b Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with and without the outcome events in each analysis. 8 If done, report the unadjusted association between each candidate predictor and outcome. 15b Persent the full prediction model to allow predictions for individuals (i.e., all regression coefficients, and model intercept or baseline survival at a given time point). 15c Explain how to the use the prediction model. 16 Report performance measures (with Cls)
