

1194

1195 **Figure S5:** Fat graft with ADSC-EVs. BALB/c nude mice were administered  
 1196 injection of a mixture of fat granules and ADSC-EVs (20  $\mu\text{g}/\text{mL}$ ). The grafts  
 1197 were harvested at 12 weeks post-transplantation for further analysis. (A)  
 1198 Macroscopic images of the fat grafts. Scale bar: 1 cm. Quantitative analysis of  
 1199 grafts shows no significant difference of volume (B) and weight (C) between  
 1200 ADSC-NVs (20  $\mu\text{g}/\text{mL}$ ) group and ADSC-EVs (20  $\mu\text{g}/\text{mL}$ ) group (n = 5 per  
 1201 group). ns, no significant difference.
