

**Figure S1. Coomassie stain of *S. carnosus* strains revealing SasG localization.**

SDS-PAGE electrophoresis followed by Coomassie staining was performed on solubilized proteins from cell wall extracts of *S. carnosus* strains AH5905 (pALC2073-*sasG*<sub>MW2</sub>), AH5907 (pAL2073 EV), AH5908 (pALC2073-*sasG*<sub>COL</sub>), and AH6012 (pALC2073-*sasG*<sub>MW2ΔA</sub>). Strains were either uninduced or induced with 100 ng/mL anhydrotetracycline. (1) Precision Plus Protein Kaleidoscope 10-250 kDa ladder. (2) AH5905 uninduced. (3) AH5905 induced. (4) AH5907 uninduced. (5) AH5907 induced. (6) AH5908 uninduced. (7) AH5908 induced. (8) AH6012 uninduced. (9) AH6012 induced.
