

Figure S1. Blood leukocyte counts in subjects dosed in Part A with ESM-HDAC391 versus placebo.

Levels of monocytes, neutrophils and platelets are indicated in panels (A), (B) and (C), respectively. Data are shown as mean and standard error; n=6 for all treatment cohorts with the exception of 5 mg and 50 mg, which are n=4. Placebos (n=12) across all cohorts were pooled.
