

Supplementary Fig. 2. Melting curves from qRT-PCR of shock protein-70 (HSP70) (A), caspase-3 (CAS-3) (B), and elongation factor-1 (EF1) (C) genes. (D) Analysis of qRT-PCR amplicons on an agarose gel (1%) stained with ethidium bromide shows a single band of HSP70, CAS-3, and EF1. NC, negative control; M, DNA marker.
