Supplementary Table 6. Predictors of liver decompensation in cACLD patients (grey zone) from proportional subdistribution hazards regression

Predictor	Adjusted sHR (95% CI)	*P*-value
Non-viral etiology of cirrhosis	11.34 (8.10–15.87)	<0.001
INR	4.27 (1.33–13.70)	0.015
Albumin	0.88 (0.85–0.91)	<0.001
Bilirubin	1.02 (1.00–1.03)	0.015

Non-viral etiologies of cirrhosis included non-alcoholic steatohepatitis, alcohol, autoimmune and cryptogenic cirrhosis.
cACLD, compensated advanced chronic liver disease; sHR, subdistribution hazard ratio; CI, confidence interval; INR, international normalized ratio.
