Title: Chromosome size matters: genome evolution in the cyperid clade

FIG. S9. Minimum mean chromosome sizes across 48 families of seed plants. Data were compiled from our study (Cyperaceae: shown in blue) and from the Plant DNA C-values database (Pellicer and Leitch, 2020) for the other 47 families. Only families with at least 20 observations from five different genera were included in the figure, which omitted the families Juncaceae and Lentibulariaceae among others.
