STROBE Statement—Checklist of items that should be included in reports of *cohort studies*

	Item No	Recommendation	Page No
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	1
		(b) Provide in the abstract an informative and balanced summary of what was done and what was found	3
Introduction			
Background/rationale	2	Explain the scientific background and rationale for the investigation being reported	4-5
Objectives	3	State specific objectives, including any prespecified hypotheses	5
Methods			
Study design	4	Present key elements of study design early in the paper	5-8
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection	5
Participants	6	(a) Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up	5,7
		(b) For matched studies, give matching criteria and number of exposed and unexposed	NA
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable	6-7
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group	7-8
Bias	9	Describe any efforts to address potential sources of bias	7-8
Study size	10	Explain how the study size was arrived at	5
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	7-8
Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding	7-8
		(b) Describe any methods used to examine subgroups and interactions	7-8
		(c) Explain how missing data were addressed	8
		(d) If applicable, explain how loss to follow-up was addressed	8
		(e) Describe any sensitivity analyses	7
Results			
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed	8-9
		(b) Give reasons for non-participation at each stage	9
		(c) Consider use of a flow diagram	8
Descriptive data	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders	8
		(b) Indicate number of participants with missing data for each variable of interest	9
		(c) Summarise follow-up time (eg, average and total amount)	7
Outcome data	15*	Report numbers of outcome events or summary measures over time	8-11

Main results	1 6	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included (b) Report category boundaries when continuous variables were categorized (c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period	8-11 8, 16, 18 NA
Other analyses	1 7	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses	-
Discussion			
Key results	1 8	Summarise key results with reference to study objectives	12-14
Limitations	1 9	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias	14-15
Interpretation	2 0	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence	12-14
Generalisability	2 1	Discuss the generalisability (external validity) of the study results	14
Other information			
Funding	2 2	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based	21

*Give information separately for exposed and unexposed groups.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at <http://www.plosmedicine.org/>, Annals of Internal Medicine at <http://www.annals.org/>, and Epidemiology at <http://www.epidem.com/>). Information on the STROBE Initiative is available at <http://www.strobe-statement.org>.

Supplemental file 2. Vital signs and laboratory findings at admission of inpatients infected with SARS-CoV-2 according to the presence of obesity.

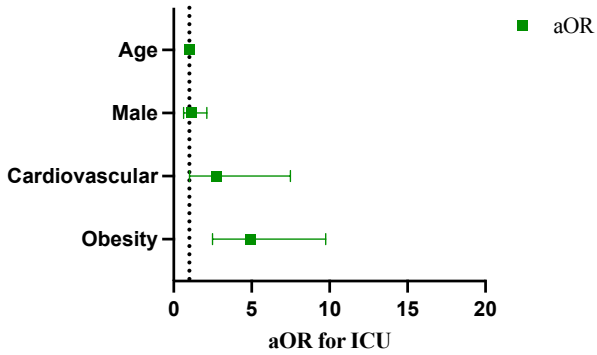

Variables	All patients (n=216) [†]	Patients with obesity (n=67) [†]	Patients without obesity (n=149) [†]	P value
Vital signs*:				
Temperature (°C), median (IQR)	37.3 (36.4-38.3)	37.0 (36.4-38.3)	37.5 (36.5-38.3)	0.486
Temperature ≥38°C, n (%)	76 (35.19)	24 (35.82)	52 (34.90)	0.896
Tachycardia, n (%)	106 (49.07)	49 (73.13)	57 (38.26)	<0.001
Tachypnea, n (%)	116 (53.70)	52 (77.61)	64 (42.95)	<0.001
SpO2, n (%)	96 (93-98)	95 (90-98)	97 (94-98)	0.053
Laboratory parameter				
Complete blood count** (n=214)				
Anemia, n (%)	41 (19.16)	8 (12.2)	33 (22.30)	0.081
Leucopenia, n (%)	52 (24.30)	15 (22.73)	37 (25.00)	0.720
Leukocytosis, n (%)	39 (18.22)	10 (15.15)	29 (19.59)	0.437
Neutropenia, n (%)	22 (10.28)	4 (6.06)	18 (12.16)	0.175
Neutrophilia, n (%)	49 (22.90)	15 (22.73)	34 (22.97)	0.968
Lymphopenia, n (%)	97 (45.33)	36 (54.55)	61 (41.22)	0.070
Lymphocytosis, n (%)	7 (3.27)	0 (0)	7 (4.73)	NA
Thrombocytopenia, n (%)	31 (14.49)	11 (16.67)	20 (13.51)	0.545
Thrombocytosis, n (%)	45 (21.03)	8 (12.12)	37 (25.00)	0.033
C-Reactive Protein ** (n=206)				
C-Reactive Protein (mg/dL), median (IQR)	1.38 (0.24-8.39)	3.02 (1.00-12.58)	0.71 (0.15-6.07)	<0.001
C-Reactive Protein ≥3 mg/dL, n (%)	82 (39.81)	33 (50.00)	49 (35.00)	0.040

Univariate analyses were performed accordingly with chi-square, Fisher's exact and Mann-Whitney-

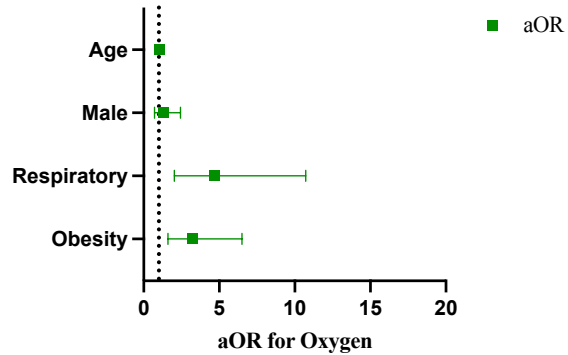

Wilcoxon tests. Statistical significance was set at p value <0.05 . IQR: Interquartile range; NA: Not Applicable. †214 patients had a complete blood count (66 with obesity and 148 without obesity), and 206 patients had C-reactive protein results (66 with obesity and 140 without obesity). *Vital signs were interpreted according to age following the Pediatric Advanced Life Support (PALS) guidelines. **Blood cell counts were interpreted following age reference intervals determined by Lubin et al 1994.

Supplemental file 3. Adjusted odds ratios for short-term complications in pediatric patients with obesity and COVID-19. Covariables used to adjust models for each outcome are detailed in each graph. Abbreviations: OR: Odds Ratio, ICU: Intensive Care Unit, NIMV: Noninvasive Mechanical Ventilation, HA COVID-19: Healthcare-Associated COVID-19.

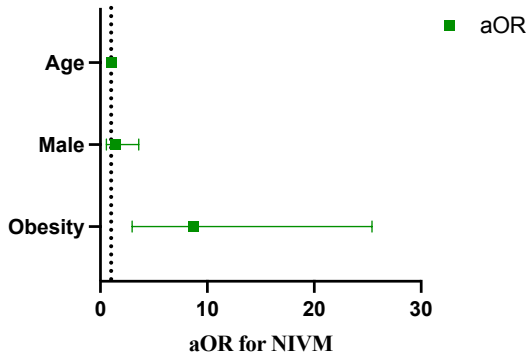

ICU

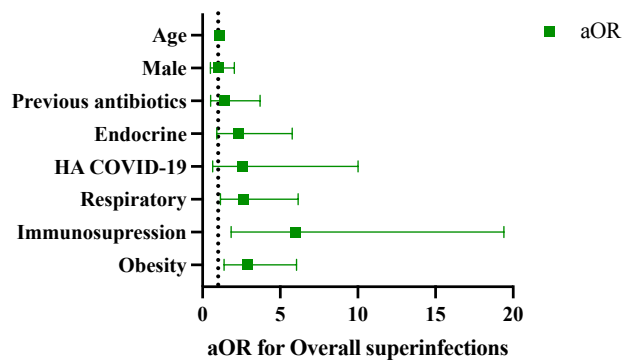

Oxygen

NIVM

Overall superinfections

Bacterial superinfection

Suspected bacterial pneumonia

Supplemental file 4. Adjusted odds ratios in cluster analysis for short-term complications in pediatric patients with obesity and COVID-19. Cluster analysis is based on dependency given by the hospital at admission and the time period of the predominant lineage or variant of concern. Covariables use to adjust models for each outcome are detailed in each graph. Abbreviations: OR: Odds Ratio, ICU: Intensive Care Unit, NIMV: Non-Invasive Mechanical Ventilation, HA COVID-19: Healthcare-Associated COVID-19.

ICU

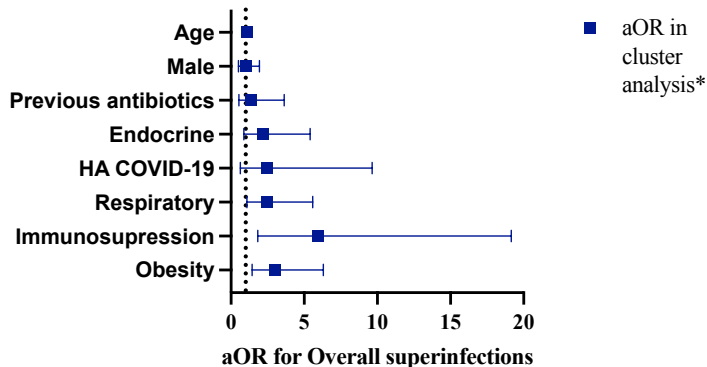

Oxygen

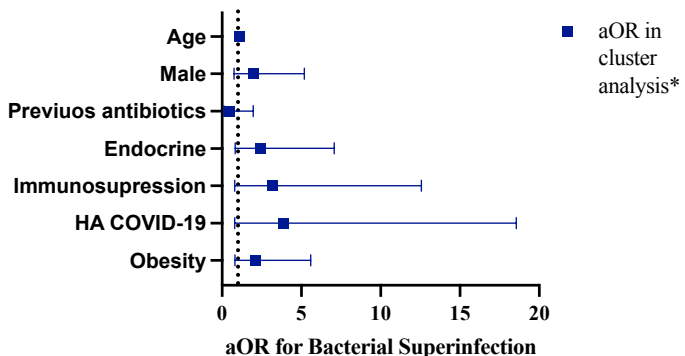

NIMV

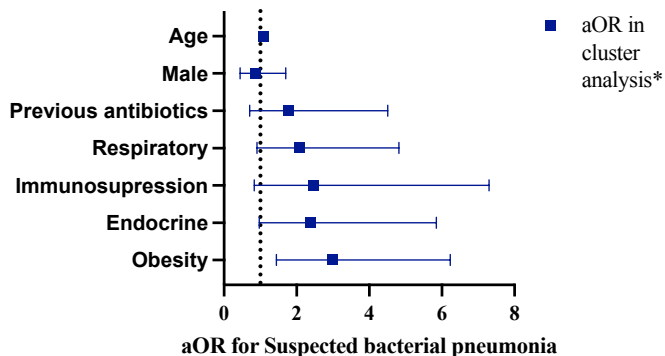

Overall superinfections

Proven bacterial superinfection

Suspected bacterial pneumonia

Supplemental file 5. Age-adjusted versus age-stratified analysis of the main outcomes.

Variable	Age-adjusted aOR (CI95%) n=216	Age-stratified analysis	
		aOR for patients 12 years and over (CI95%) n=88	aOR for patients under 12 years (CI95%) n=128
ICU admission	5.63 (2.90-10.94)*	9.61 (4.21-21.94)*	3.60 (1.47-8.83)*
Oxygen	2.77 (1.36-5.63)*	5.60 (2.05-15.34)*	2.24 (0.83-6.03)
NIMV	6.81 (2.11-22.04)*	17.09 (1.78-163.82)*	2.51 (0.44-14.41)
Overall superinfections	3.02 (1.45-6.31)*	1.49 (0.56-3.93)	7.21 (2.30-22.63)*
Suspected bacterial pneumonia	3.00 (1.44-6.23)*	2.09 (0.78-5.56)	6.69 (2.20-20.38)*
Dyspnea	9.91 (1.92-51.10)*	6.38 (0.71-57.91)	16.52 (1.67-164.66)*
Muscle weakness	20.04 (2.50-160.65)*	10.34 (1.22-87.41)*	NA#

Analysis performed following generalized estimating equations methodology (cluster analysis).

* Statistically significant ($p < 0.05$).

All patients under 12 years old with muscle weakness at follow-up had obesity.

ICU: intensive care unit; NIMV: non-invasive mechanical ventilation; aOR: adjusted odds ratio; CI95%: 95% confidence interval.
