

S22 Fig. Linkage percentage as a function of assay separation. (A) AAV2 and (B) AAV5 viral samples were used either directly as a template (in drop) or after the indicated incubation time (1, 2.5, 5, 10, or 15 minutes) at 95°C for duplex ddPCR reactions using CMV-Enh FAM and the indicated HEX assay. The linkage percentage was calculated using a previously published equation.¹⁷
