<b>Supplemental Table 1. Primary outcome stratified by hospital delivery volume</b>				
Primary outcome	Umbilical cord milking (N=872)	Early cord clamping (N=858)	Crude odds ratio (95% CI)	Odds ratio (95% CI) accounting for study design
NICU admission by predefined criteria				
Low Delivery Volume*	120/519 (23.1)	129/558 (23.1)	1.00 (0.75-1.33)	1.04 (0.77-1.41)
High Delivery Volume†	79/353 (22.4)	110/300 (36.7)	0.50 (0.35-0.70)	0.42 (0.26-0.70)
Data are n (%), unless otherwise noted.				
* Based on reported deliveries < 5000 births per year				
† Based in reported deliveries >5000 births per year
