

Figure S1 Expression of GM-CSF in ES-D3 cells does not influence the production of exosomes from these cells. Exosomes were acquired from ES-D3 cells expressing the empty vector or GM-CSF. The yield of exosomes was evaluated. The data are presented as mean \pm SD of three independent ELISA experiments. n.s., not significant, Unpaired Student's *t* tests. GM-CSF, granulocyte-macrophage colony stimulating factor; ES, embryonic stem.
