

Fig. S2 Histological and Pathological Analyses of the Liver Samples Isolated from Healthy, ALF and hEnSC-Transplanted Animals in D-GalN induced rat ALF model. **a** Images of H & E, and TUNEL staining, Caspase 3 and KI-67 staining of rat liver sections. Liver samples were collected at day 3 post drug administration. Scale bar: 50 μ m. **b** Representative images displaying the morphology of whole livers dissected from rats of different groups. Liver samples were collected at day 3 post D-GalN administration and perfused with HBSS. Healthy: healthy rats; ALF: PBS-treated ALF rats; hEnSC: hEnSC-transplanted ALF rats.
