Previous ICD, n (%)	14 (14.9)	113 (16.7)	- 0.0519	14 (14.9)	89 (15.8)	- 0.0249

The propensity score for each patient was estimated using a multivariable logistic regression model including 5 covariates (sex, age, history of ischemic heart disease, LVEF \leq 40% at admission and previous ICD) that were prognostically important for the outcome. Subjects were matched using greedy nearest neighbor matching with 6:1 ratio and a caliper distance of 0.2 times the SD of the logit of the propensity score.

CS = cardiogenic shock, ICD = implantable cardiac defibrillator, LVEF = left ventricular ejection fraction, SD = standard deviation, VA = ventricular arrhythmia

High troponin was defined at the time of CS with a threshold of 10 μ UI/L for standard troponin I, of 200 μ g/L for high sensitivity troponin I and of 2000 ng/mL for high sensitivity troponin T. CS = cardiogenic shock, VA = ventricular arrhythmia, VAD = ventricular assist device

FIGURE S1: All-cause mortality in the matched cohort according to a ventricular arrhythmia trigger

Panel A represents one-year overall mortality. Panel B focus on one-month mortality. The cumulative incidences of one-year and one-month mortality were estimated with the use of the Kaplan–Meier method; hazard ratios and 95% confidence intervals were estimated with the use of Cox regression models.

CS = cardiogenic shock, HR = hazard ratio, VA = ventricular arrhythmia

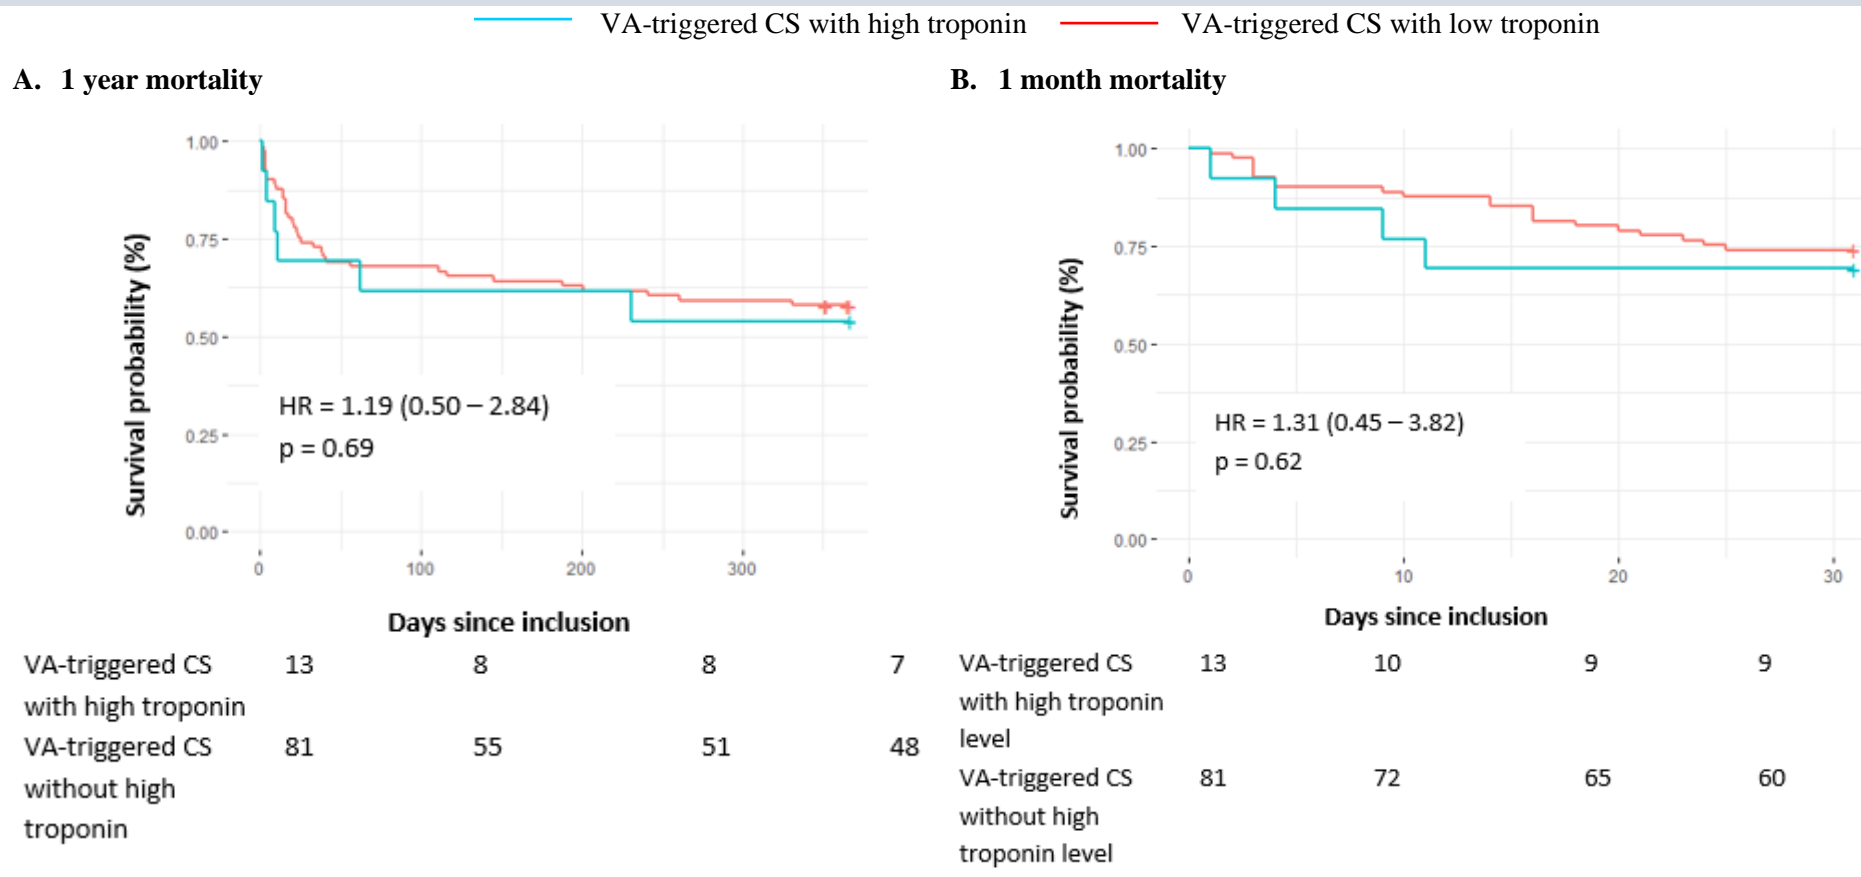

FIGURE S2: Mortality outcomes in the VA group according to various types of ischemic heart disease.

Panel A represents one-year overall mortality. Panel B focus on one-month mortality. The cumulative incidences of one-year and one-month mortality were estimated with the use of the Kaplan–Meier method; hazard ratios and 95% confidence intervals were estimated with the use of Cox regression models. Underlying cardiopathy was considered acute ischemic when indicated as such by managing physician. Ischemic heart disease was considered stable in case of previously known ischemic cardiomyopathy without new lesion on repeated coronary angiogram.

CS = cardiogenic shock, HR = hazard ratio, VA = ventricular arrhythmia
