Figure S1. Flow diagram of the participants

Health care workers working at Wakayama
City Medical Association and who
underwent medical checkups and serologic
test were enrolled in this study (n=99)

function

Excluded from the analysis were:

3 participants that contracted breakthrough infections,
5 participants that did not receive a third dose,
1 participant that was treated for GD with the positive
TRAb (3.7 IU/L) at baseline

90 participants completed all the
planned schedules without exclusion

20 participants had insufficient sample
amount to determine thyroid autoimmune
antibodies and function

70 participants were finally assessed for
thyroid autoimmune antibodies and
