

Supplementary Figure 2. The subgroup analyses of cumulative incidence of CRC in appendectomy cases and controls classified by gender (A) and (B), age (C) and (D), and tumor locations (E), (F), (G) and (H). Proximal colon cancer included the tumor located in cecum, ascending colon, hepatic flexure and transverse colon. Distal colon cancer included the tumors located in splenic flexure, descending colon and sigmoid colon.
