Model specification validation results

Figure S1: Kaplan-Meier observed survival curve of TPT regimen

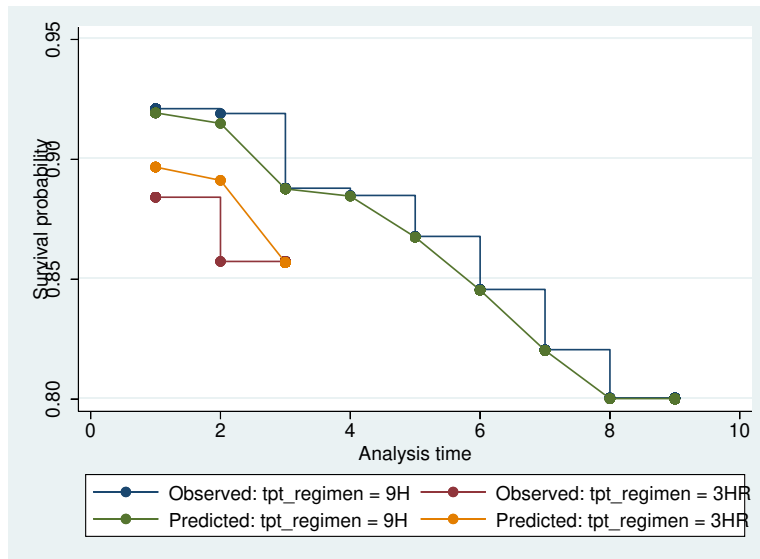

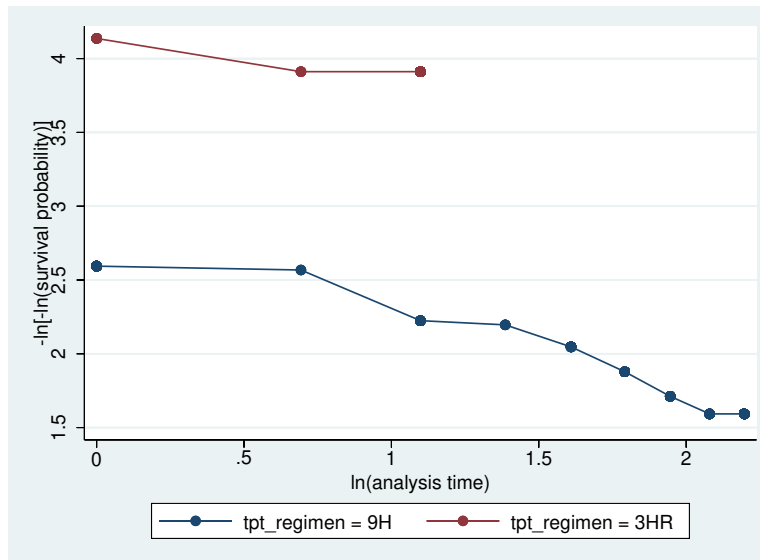

Figure S2: Log-log plot of the final Cox model

The log-rank test result to assess the equality of survival between the two TPT regimen was $p=0.319$.

The p-value of the global postestimation proportional hazards test 0.644 and tests of individual parameters produced p-values of $0.112 < p < 0.955$.
