Table S7. Associations (ORs and 95% CIs) of overall social relationships satisfaction score with accumulation of multimorbidity in complete cases (n=4521).	14
Table S8. Associations (ORs and 95% CIs) of overall social relationships satisfaction score with incidence of one condition and accumulation of multimorbidity (n=7357).	15

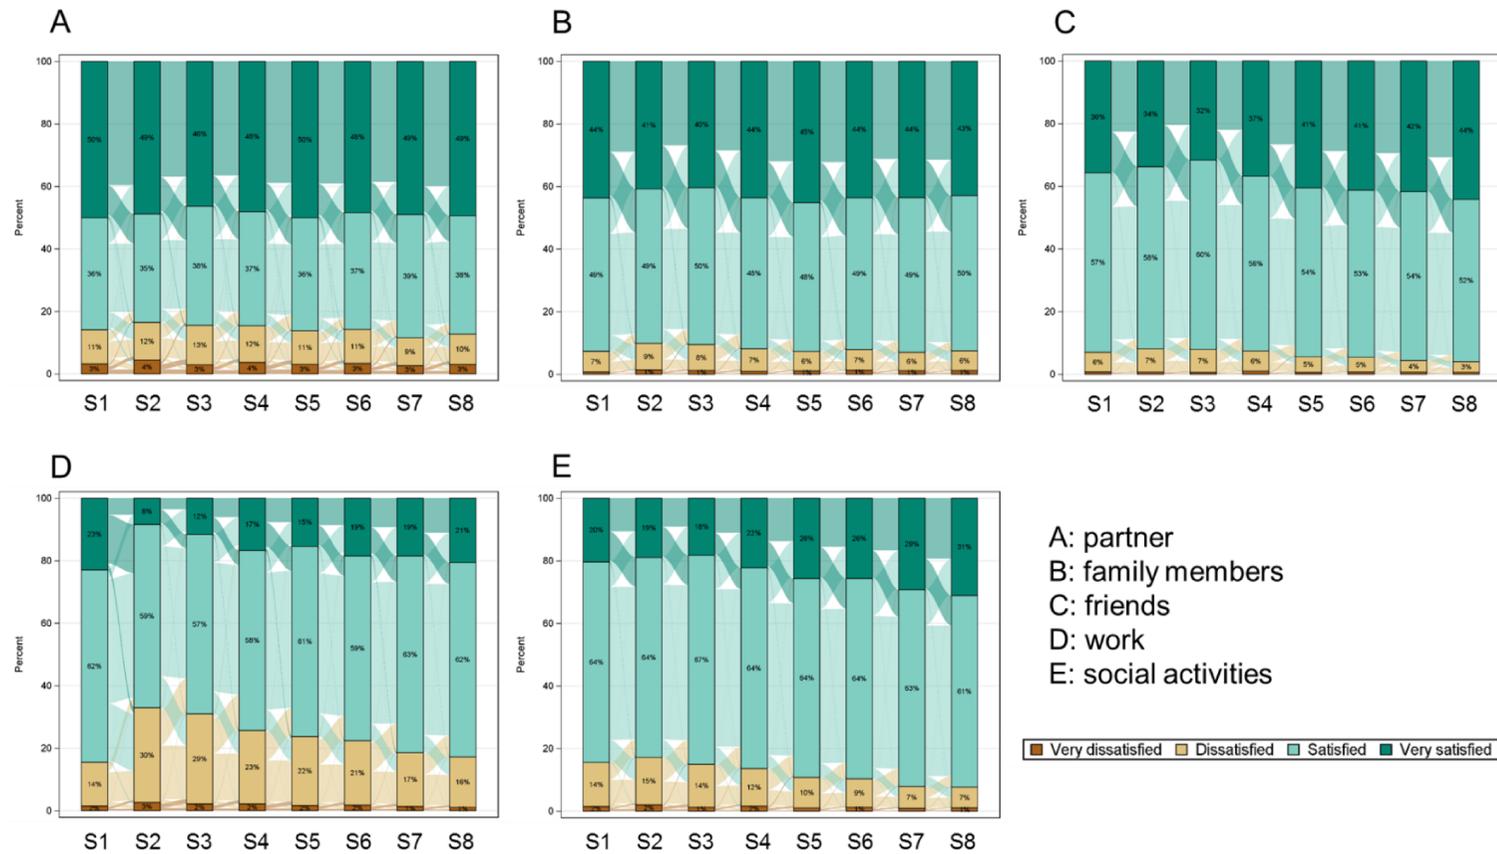

Figure S1. Longitudinal transitions of women in different satisfaction categories of each social relationship component.

The bars with different colours show the distribution of different satisfaction categories at each survey, and the links between bars show the flow from one category to another.

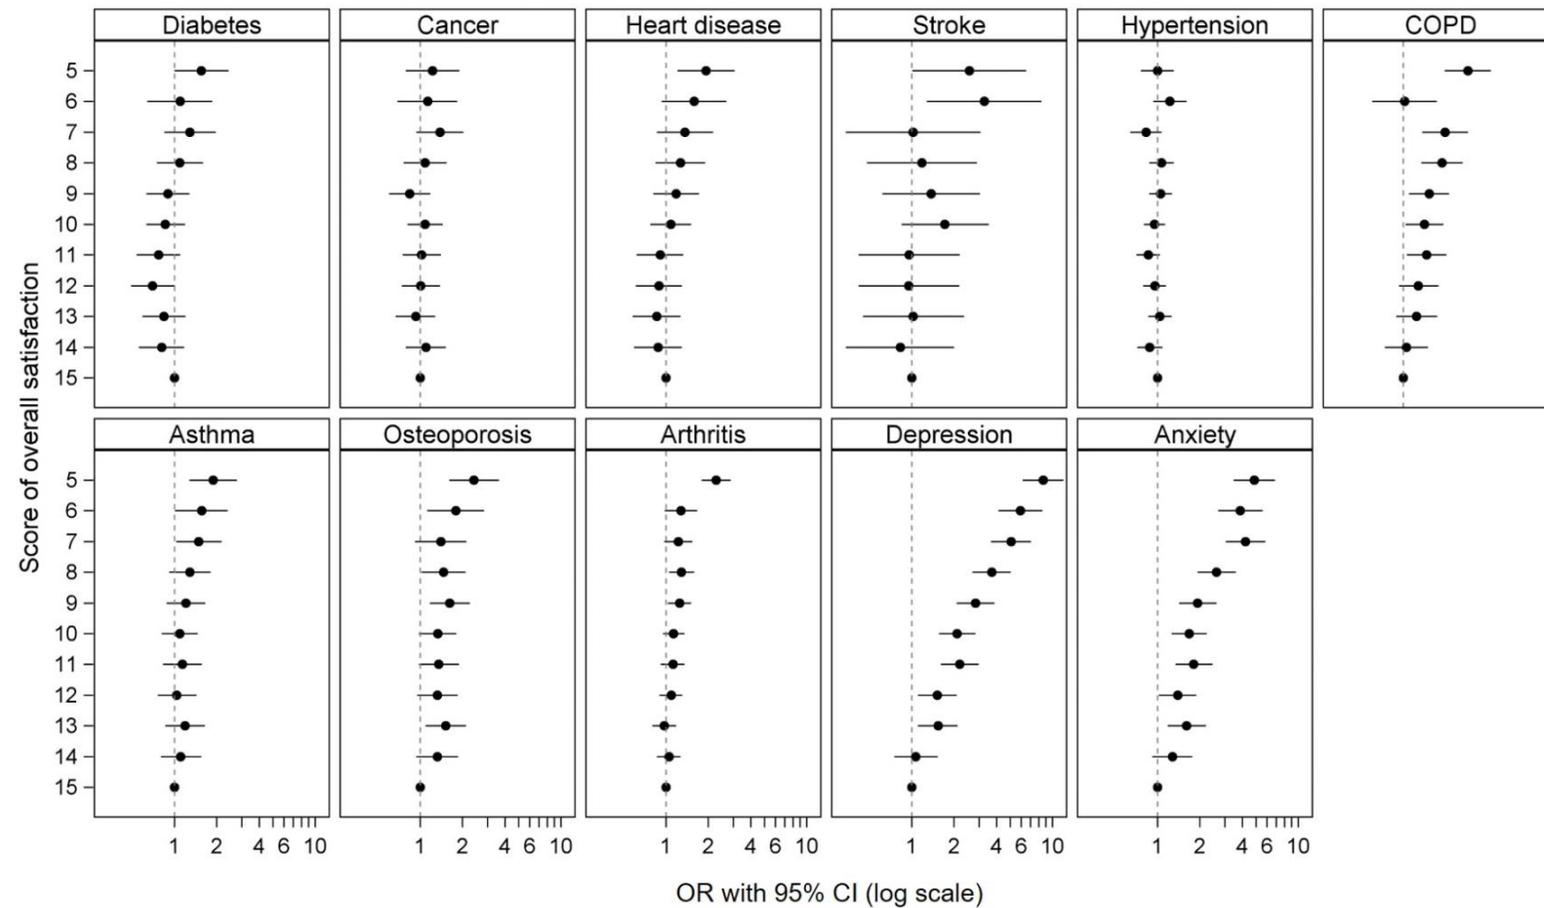

Figure S2. ORs and 95% CI (age-period adjusted) for associations between overall social relationships satisfaction score and incidence of each chronic condition (n=7694).

Table S1. Definitions of covariates.

Covariate	Definition	Source
Sociodemographic Factors		
Country of birth		Baseline
Australia		
Other	Including United Kingdom, Italy, Greece, New Zealand, Vietnam, and others	
Marital status		Each survey
Married/de facto	de facto (opposite sex, same sex)	
Separated/divorced/widowed		
Never married	Single	
Area of residence	Using ARIA+ score to define area of residence *	Each survey
Major cities	0-0.20	
Inner regions	>0.20-2.40	
Outer regions	>2.40-5.92	
Remote/Very remote	Remote Australia >5.92-10.53 Very remote Australia >10.53	
Education		Baseline
University/higher degree	University degree, Higher university degree (e.g. Grad Dip, Masters, PhD)	
Trade/apprenticeship/higher	Trade/apprenticeship (e.g. Hairdresser, Chef), Certificate/diploma (e.g. Child Care, Technician)	
Higher school certificate	Higher school or leaving certificate (or equivalent)	
No or low qualifications	No formal qualifications, School or intermediate certificate (or equivalent)	
Ability to manage on income		Each survey

Easy/not bad
 Sometimes difficult
 Impossible/difficult always

Lifestyle Factors		
BMI	WHO classification	Each survey
Underweight	<18.5 kg/m ²	
Normal weight	18.5-24.9 kg/m ²	
Overweight	25-29.9 kg/m ²	
Obese	≥ 30 kg/m ²	
Physical activity	Using MET min/week to define physical activity †	Each survey
High	≥ 1200 MET min/week	
Moderate	600-1199 MET min/week	
Low	40-599 MET min/week	
Nil/sedentary	0-39 MET min/week	
Alcohol intake	Australian National Health and Medical Research Council guidelines	Each survey
Low risk drinker	up to 14 drinks per week	
Non-drinker/ Rarely drinker		
Risky drinker	more than 15 drinks per week	
Smoking status		Each survey
Never-smoker	Have never smoked	
Ex-smoker	Used to smoke	
Current smoker	Smoke occasionally or regularly	
Menopausal status	Based on the responses to survey questions about hysterectomy, oophorectomy, hormone use and menstrual pattern	Each survey

Surgical menopause hysterectomy, oophorectomy or both

Hormone use

Pre-menopausal

Peri-menopausal

Post-menopausal

* ARIA+ (Accessibility/Remoteness Index of Australia) is Australia's most authoritative geographic measure of remoteness based on distances to major population centres (1).

† A physical activity score in metabolic equivalent (MET) minutes per week was derived using the following formula: MET min/week = (walking minutes * 3.5 METs) + (moderate activity minutes * 4.0 METs) + (vigorous activity minutes * 7.5 METs) (2)

Table S2. Comparison of characteristics of women who were excluded in the analyses versus included women, ALSWH, 1996 (n=13714).

Characteristic	Included (7694)	Excluded (6020)	p-value *
Overall satisfaction scores	10.9 ± 2.5	10.3 ± 2.8	<0.001
Age at baseline	47.6 ± 1.5	47.6 ± 1.5	0.211
Area of residence			0.159
Major cities	2802 (36.4)	2197 (36.5)	
Inner regions	2978 (38.7)	2236 (37.2)

Table S5. Roles of each social relationship component (column) in attenuating the associations between other social relationship component (row) and accumulation of multimorbidity (n=7694).

	Partner/ closest person	Family members	Friends	Work/career/ study	Social activities	All
Partner/closest person	-	39.12	20.44	16.08	38.49	64.98
Family members	23.70	-	22.76	15.63	35.34	48.54
Friends	37.36	40.34	-	20.93	79.46	122.22
Work/career/study	20.17	27.87	23.22	-	39.13	53.58
Social activities	17.89	22.72	8.18	13.41	-	27.52

Percentage of attenuation: $100 \times (\beta_{\text{Model index component}} - \beta_{\text{Model index component}} + \text{other component(s)}) / (\beta_{\text{Model index component}})$. For example, 39.12% in Column 2 and Row 1 indicates that there is 39.12% attenuation when adding satisfaction with family member to the model of satisfaction with partner/closest person. 64.98% in Column 6 and Row 1 indicates that the other four social relationship components combined explained 64.98% of the association between satisfaction with partner/closest person and accumulation of multimorbidity.

Table S6. Associations (ORs and 95% CIs) of overall social relationships satisfaction score at baseline with accumulation of multimorbidity (n=7357).

Satisfaction score	Accumulation of multimorbidity
≤5	2.22 (1.79, 2.75)
6	2.10 (1.68, 2.61)
7	1.91 (1.58, 2.31)

15	Ref	Ref

The model was estimated using cumulative incidence of multimorbidity (1 or ≥2) at each survey regressed on covariate variables at the previous survey, compared with women who developed 0 new conditions. The models were all adjusted for age at baseline, marital status, area of residence, education, country of birth, ability to manage on income, physical activity, alcohol intake, smoking status, and menopausal status.
