Adjusted for: Parity, maternal residence, history of mental health condition, substance use during pregnancy, and antenatal hospital admissions \*Analysis is restricted to those with a vaginal birth; bold numbers denote statistical significance \*\*Denominator includes people with a previous cesarean scar who were identified as eligible for VBAC or eligibility is unknown or not documented, and current delivery was singleton, vertex presentation. Denominator excludes women with a delivery episode and a history of cesarean who were not eligible for VBAC per the chart or women with a previous scar and unknown or not documented VBAC eligibility who did not have a singleton vertex pregnancy. MW= midwife; FP=family physician; OB=obstetrician
