Delta-Omicron recombinant escapes

therapeutic antibody neutralization

Ralf Duerr, Hao Zhou, Takuya Tada, Dacia Dimartino, Christian Marier, Paul Zappile, Guiqing Wang, Jonathan Plitnick, Sara B. Griesemer, Roxanne Girardin, Jessica Machowski, Sean Bialosuknia, Erica Lasek-Nesselquist, Samuel L. Hong, Guy Baele, Meike Dittmann, Mila B. Ortigoza, Prithiv J. Prasad, Kathleen McDonough, Nathaniel R. Landau, Kirsten St George, and Adriana Heguy

Supplemental Information

This PDF file includes:

Figures S1 to S2
Tables S1 to S4

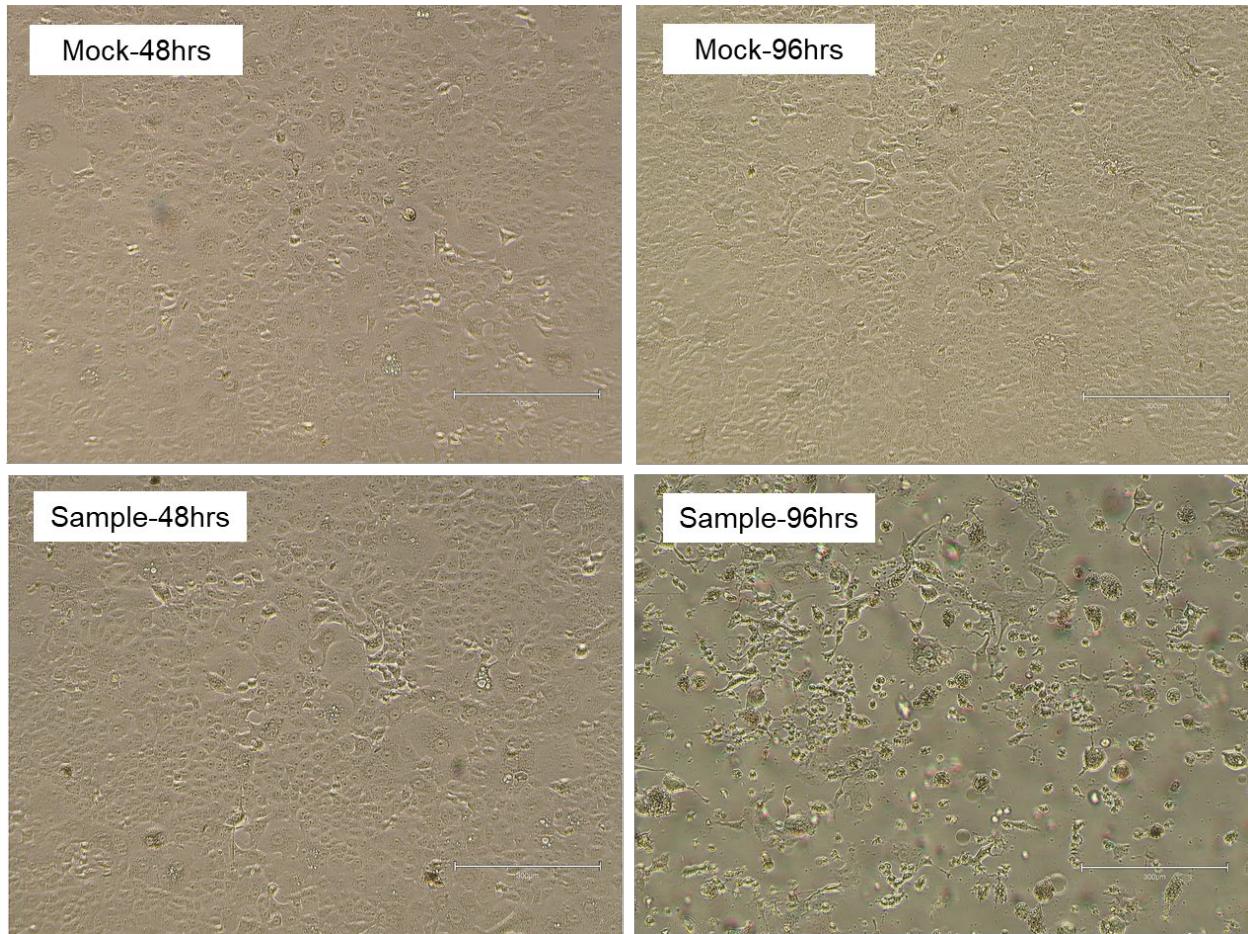

Figure S1. Cytopathic effect of the SARS-CoV-2 Delta-Omicron recombinant on VeroE6/TMPRSS2 cells, related to **Figure 1**.

A residual nasopharyngeal swab specimen of the patient infected with the recombinant variant was inoculated onto VeroE6/TMPRSS2 cells and observed daily for cytopathic effects (bottom row). The image on the lower right (Sample-96hrs) is the same as the left image in **Figure 1D** (Delta-Omicron recombinant). Images were taken with an EVOS M5000 inverted microscope (ThermoFisher Scientific, Waltham, MA); 10X magnification.

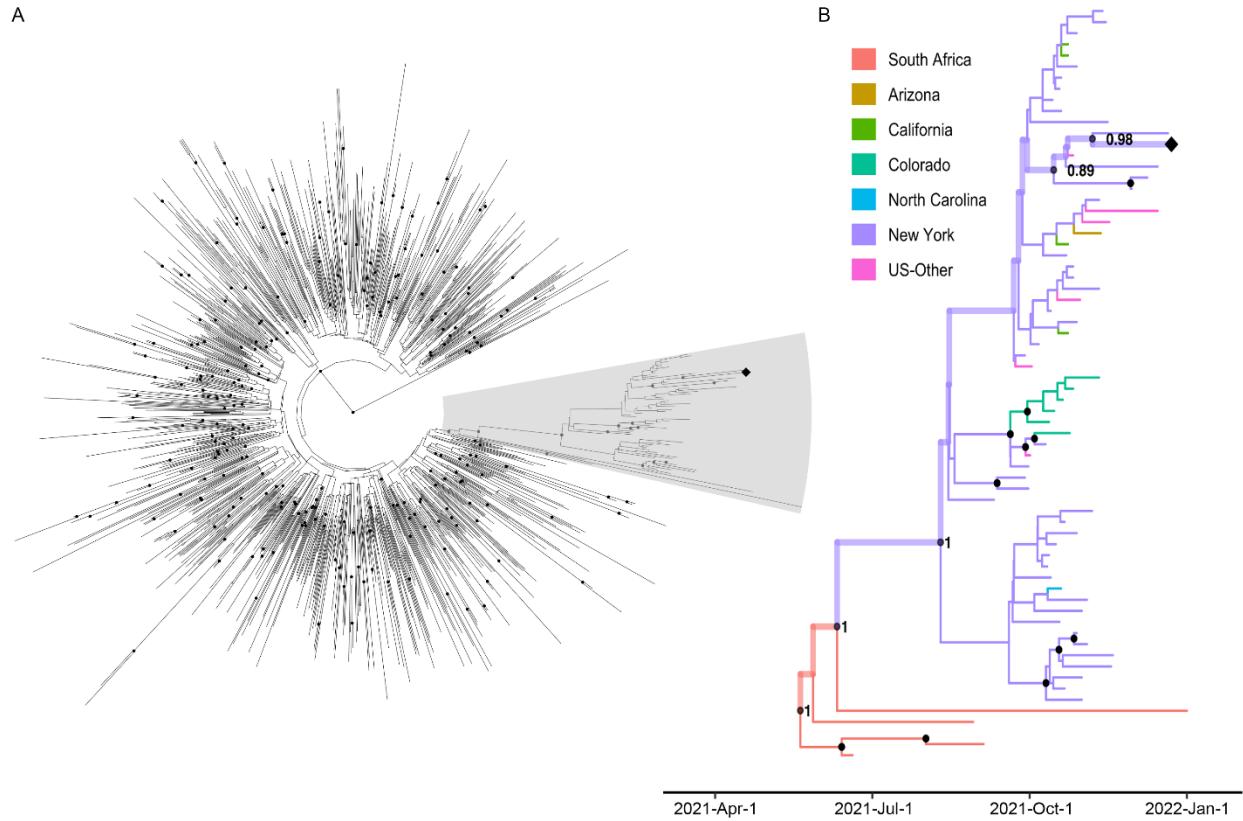

Figure S2. Phylogeographic analysis of the AY.45 cluster containing the recombinant, related to **Figure 1**.

(A) Maximum clade credibility tree of 1122 AY.45 genomes. The recombinant genome (AY.45 segment of it) is highlighted with a diamond symbol. Nodes with a posterior support above 70% are denoted with a black circle. A well supported phylogenetic cluster containing the recombinant genome is shaded in gray. (B) Phylogeographic analysis of the phylogenetic cluster containing the AY.45 segment of the recombinant sequence. The recombinant is annotated with a diamond symbol, and branches corresponding to the Markov jump trajectory plot (**Figure 1C**) are highlighted (by thicker branches). Internal nodes with posterior support of 70% or higher are denoted with a black circle, whereas nodes with 100% support are annotated explicitly.

Table S1. Summary of mutations detected in the Delta-Omicron recombinant by four sequencing methods on different sample aliquots, with or without in vitro culture, related to **Figure 1**.

^a: low sequencing depth (<40%);

AmpliSeq: AmpliSeq Insight sequencing (performed at NY State DOH);

harvest: ARTIC NGS amplicon sequencing using cells and supernatant after 96h virus culture;

shotgun: metagenomics shotgun sequencing (performed at NYU);

N: not covered;

X: mutation is present;

xGen: IDT xGen NGS amplicon sequencing (performed at NYU);

24h-96h: ARTIC NGS amplicon sequencing using supernatants after the indicated culture time points (performed at NY State DOH);

--: no coverage

Table S2. Real-time RT-PCR results and infectious virus titers during culture of the SARS-CoV-2 Delta-Omicron recombinant in VeroE6/TMPRSS2 cells, related to **Figure 1**.

Sample	Ct value (N1)	Virus titer (\log_{10} PFU/ml)
NPS specimen	30.76	ND
24 hpi	30.55	2.67
48 hpi	23.10	4.66
72 hpi	16.77	6.97
96 hpi	13.50	6.67

Abbreviations: Ct: cycle threshold value, hpi: hours post infection, ND=not done, NPS: naso-pharyngeal swab, PFU: plaque-forming units.

Table S3. cDNA gene synthesis for the generation of the SARS-CoV-2 Delta-Omicron spike plasmid, and primers for the insertion of point mutations into plasmids for pseudotyped virus generation, related to **Figures 3-5**.

synthesized cDNA gene for Delta-Omicron spike (Delta segment to be fused to BA.1)
