

Supplemental Material

Model fit information for structural equation models for within sex and race comparisons

Models		Sex				Race				
		$\chi^2(\text{df})$	CFI	TLI	RMSEA	$\chi^2(\text{df})$	CFI	TLI	RMSEA	
1. Placement only, sleep problems, and adult arrests	Female	7.98(8)	1.000	1.000	0.001	White	7.04(8)	1.000	1.000	0.001
2. Placement for CM & delinquency, sleep problems, and adult arrests	Female	5.48(8)	1.000	1.000	0.001	White	8.05(8)	0.998	0.994	0.008
3. Placement only, sleep problems, and internalizing symptoms	Female	14.96(8)	0.971	0.944	0.026	White	13.01(8)	1.000	1.000	0.001
4. Placement for CM & delinquency, sleep problems, and internalizing symptoms	Female	8.68(8)	1.000	1.000	0.001	White	10.42(8)	1.000	1.000	0.001
1. Placement only, sleep problems, and adult arrests	Male	4.53(8)	0.935	0.901	0.049	Black	7.01(8)	1.000	1.000	0.001
2. Placement for CM & delinquency, sleep problems, and adult arrests	Male	1.84(8)	1.000	1.000	0.001	Black	7.45(8)	1.000	1.000	0.001
3. Placement only, sleep problems, and internalizing symptoms	Male	8.90(8)	0.973	0.930	0.036	Black	9.06(8)	1.000	1.000	0.001
4. Placement for CM & delinquency, sleep problems, and internalizing symptoms	Male	8.52(8)	0.959	0.895	0.047	Black	10.97(8)	1.000	1.000	0.001

Note. CM = child maltreatment; CFI = comparative fit index; TLI = Tucker-Lewis index; RMSEA = root mean square error of approximation
