

Cell Reports Medicine, Volume 4

Supplemental information

Using patient-derived organoids to predict

locally advanced or metastatic lung cancer

tumor response: A real-world study

Han-Min Wang, Chan-Yuan Zhang, Kai-Cheng Peng, Ze-Xin Chen, Jun-Wei Su, Yu-Fa Li, Wen-Feng Li, Qing-Yun Gao, Shi-Ling Zhang, Yu-Qing Chen, Qing Zhou, Cong Xu, Chong-Rui Xu, Zhen Wang, Jian Su, Hong-Hong Yan, Xu-Chao Zhang, Hua-Jun Chen, Yi-Long Wu, and Jin-Ji Yang

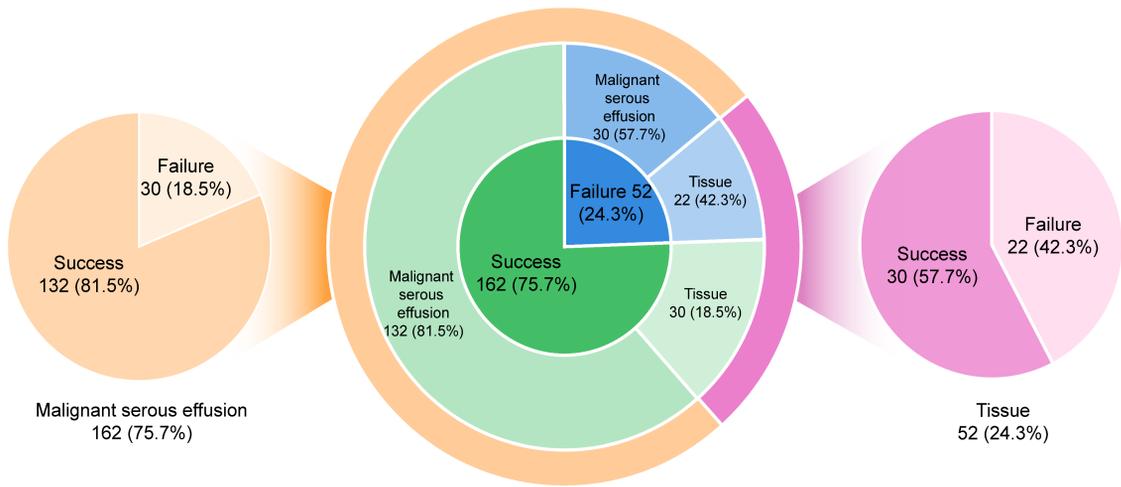

Figure S1. The success rate of LCO cultures in this study. Related to Figure 1A

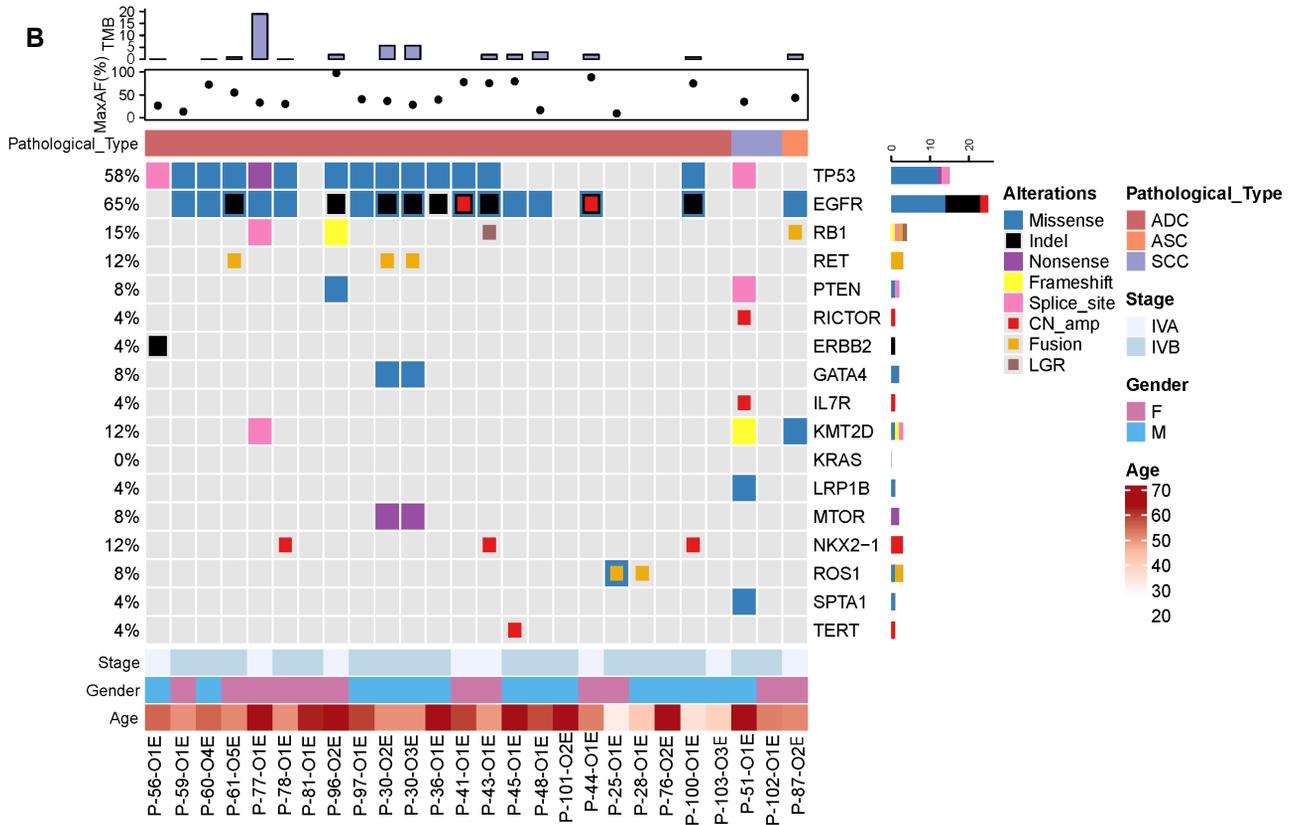

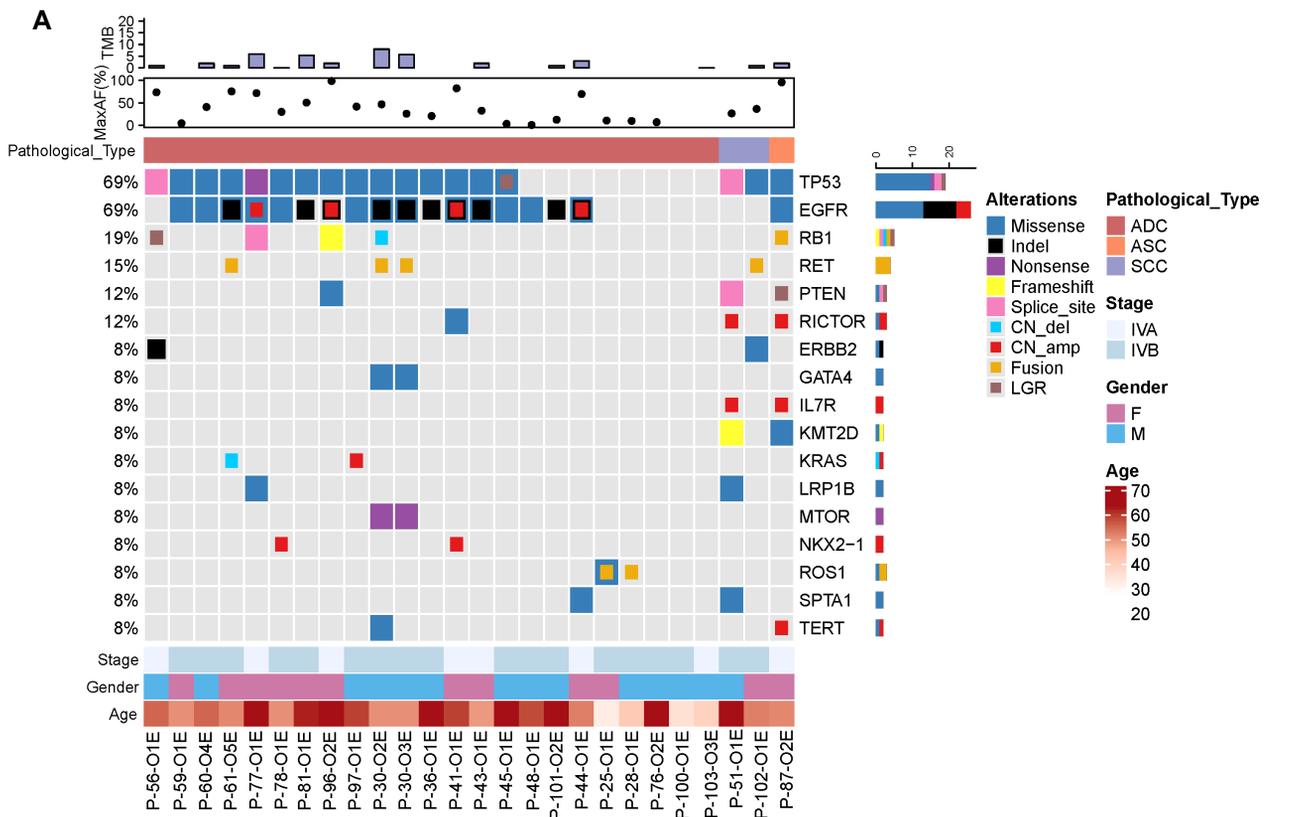

Figure S2. Genomic profiling of LCO samples. Related to Figure 2A

(A). Somatic alterations MSE samples. (B). Somatic alterations detected from MSE-derived LCO samples.

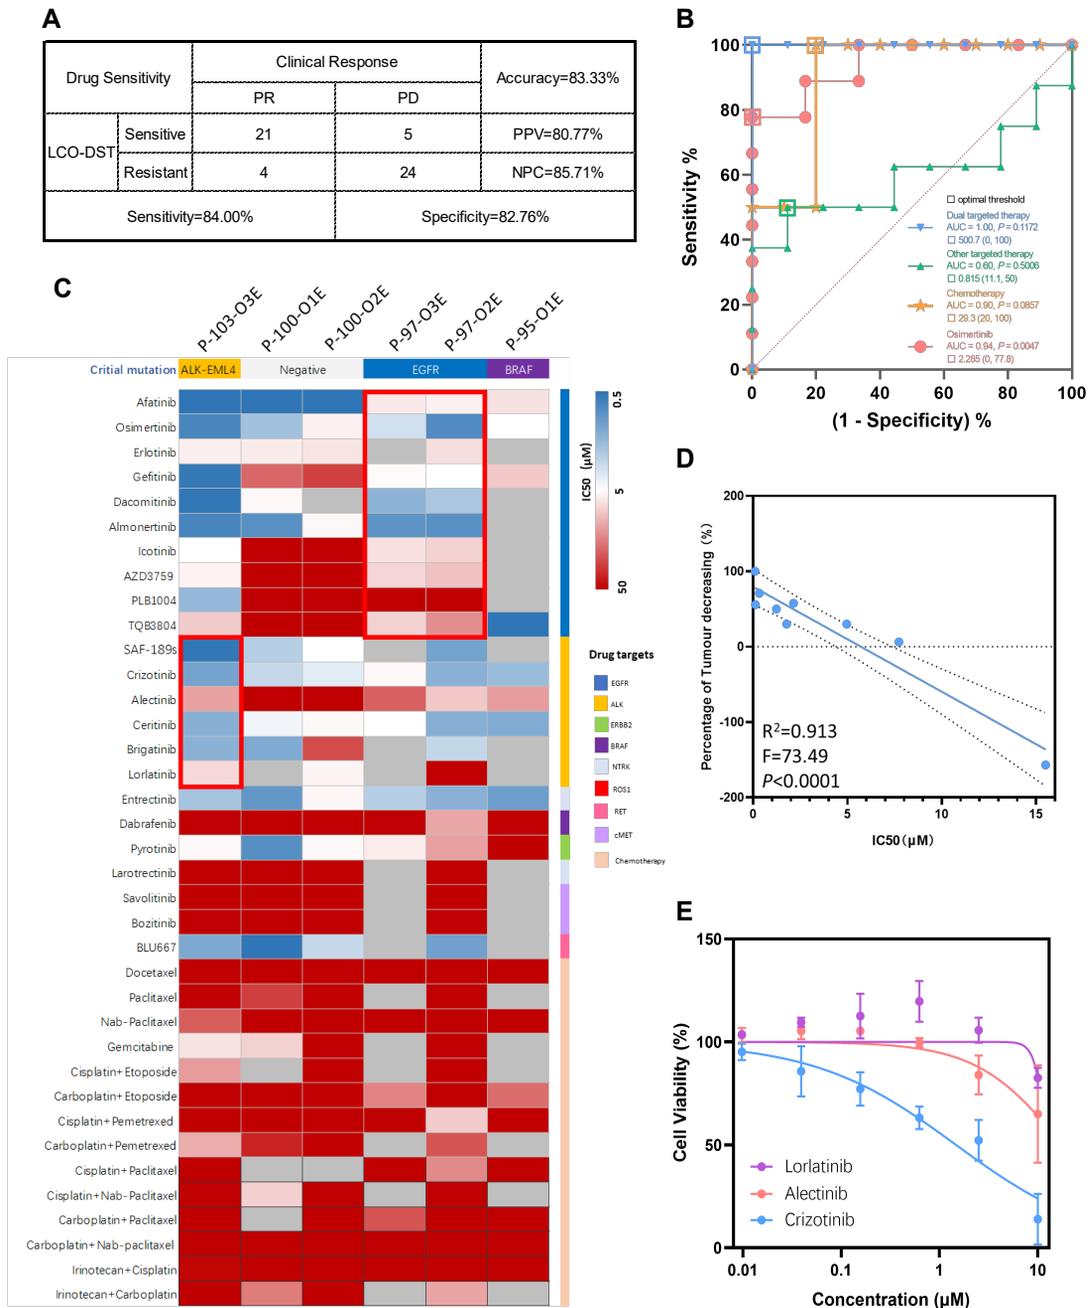

Figure S3. Correlation between IC₅₀s of targeted drugs and tumor cell reduction rates. Related to Figure 3 (A). The concordance for drug sensitivity between clinical response and LCO samples. (B). Receiver operating characteristic (ROC) analysis of osimertinib, chemotherapy, dual-targeted therapy, and other targeted therapy groups LCO drug tests (C). Heatmap of LCO-DST IC₅₀ of P-103, P-100, P-97, and P-95. (D). Correlation between IC₅₀ of osimertinib and the percentage of tumor shrinkage. (E). Dose-effect curves of alectinib, lorlatinib, and crizotinib of LCOs derived from P-63.

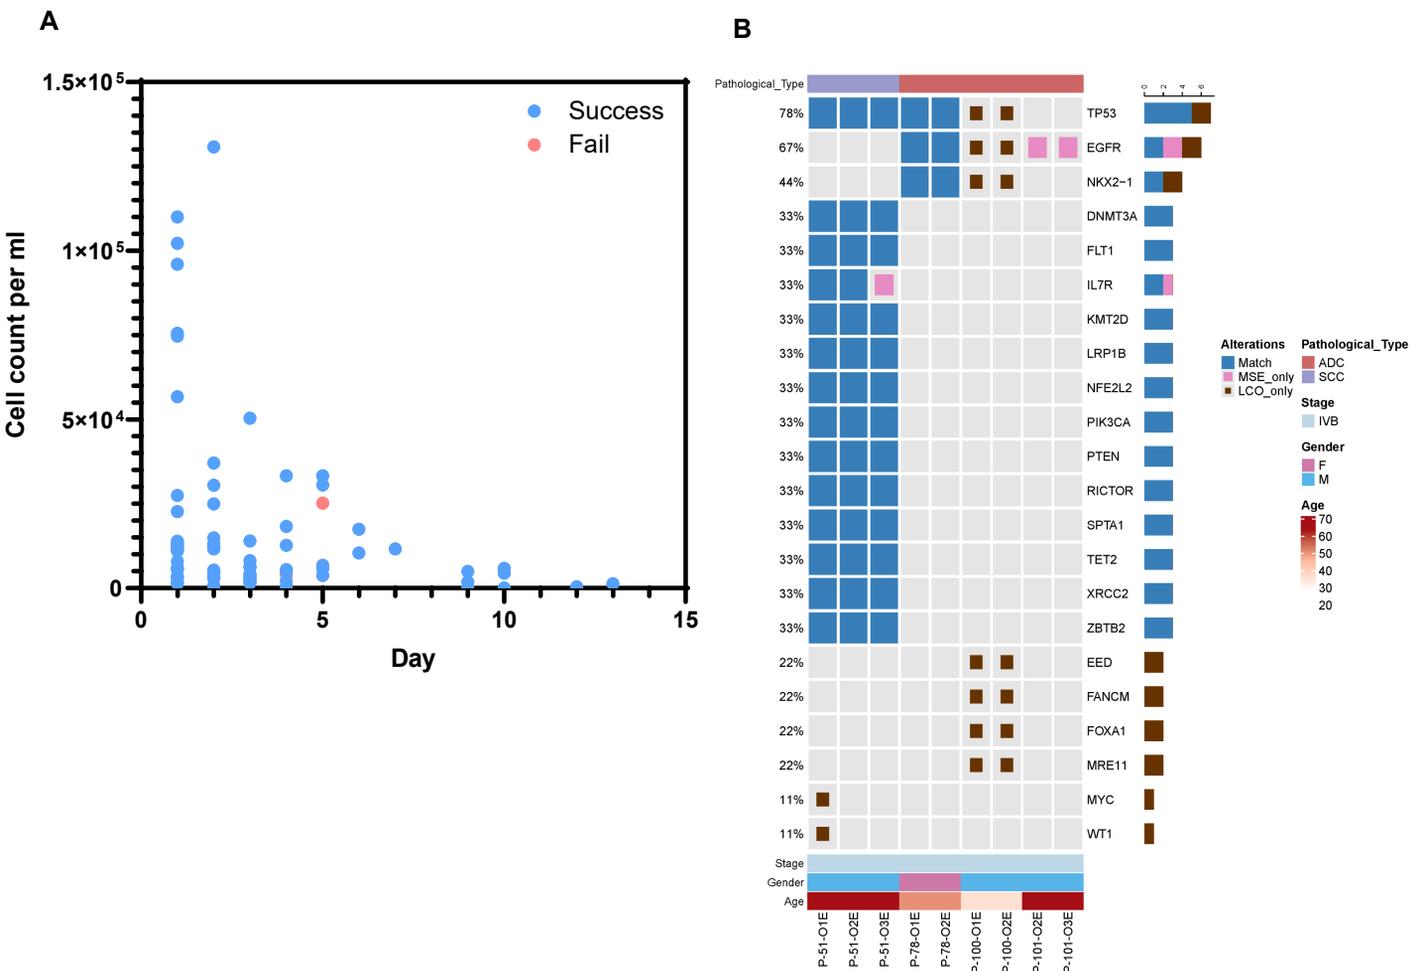

Figure S4. Dynamic evolution of cell numbers and genetic alterations in LCOs and MSEs. Related to Figure 4A
 (A). Cell density of MSEs in different sampling times. (B). Somatic alterations detected from LCOs at different sampling times in four patients.

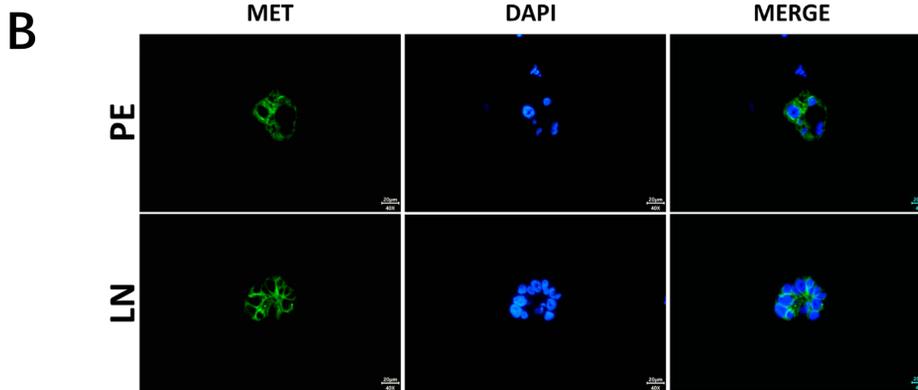

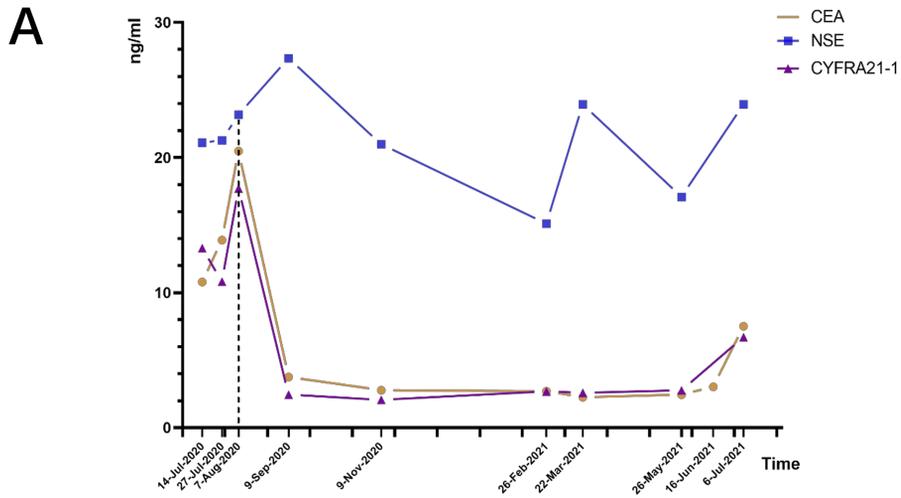

Figure S5. Evaluation of tumor markers and baseline immunofluorescence of P-60. Related to Figure 5
 (A). Alterations of CEA, CYF21-1, and NSE of P-60. (B). Immunofluorescence staining of MET and DAPI of LCOs derived from pericardial effusion and lymph node of P-60. Scale bar, 20 μ m.

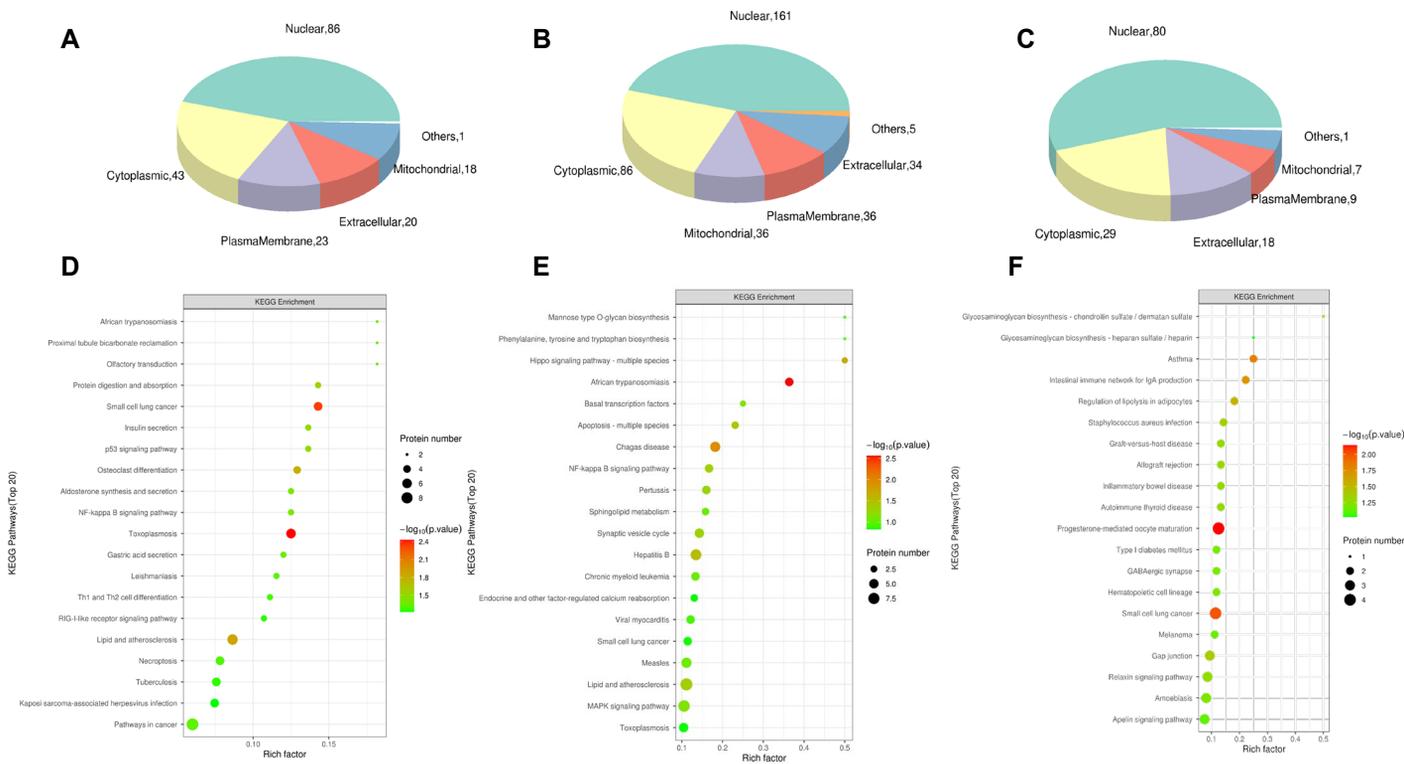

Figure S6. Pie chart showing cell locations and scatter plot of KEGG enrichments of differentially expressed proteins (DEPs) from different comparison groups. Related to Figure 6

(A). Cell locations of the osimertinib vs. control group. (B). Cell locations of the BLU-667 vs. control group. (C). Cell locations of the combo vs. control group. (D). KEGG enrichment of the osimertinib vs. control group. (E). KEGG enrichment of the BLU-667 vs. control group. (F). KEGG enrichment of the combo vs. control group.

Table S1. The list of lung cancer samples used for successful establishment of patient-derived organoids. Related to Figure 1A.

Case	Organoid ID	Gender	Age	ECOG		Pathology diagnosis	Site of sampling	Driver mutation detected by routine genetic testing or FISH	Treatment lines	Therapies after acquiring tumor specimens to generate organoids	Organoid IHC
