

**Supplemental Tables for "Bayesian Inference of Chemical Exposures from NHANES Urine Biomonitoring Data", Stanfield et al.**

- Table S1. Table 1 of the bayesmarker input file, the metabolites table. Lists metabolite, NHANES code, cohort, NHANES file, units, etc.
- Table S2. Table 2 of the bayesmarker input file, the weights table. Lists other NHANES files and needed columns to perform scaling and other transformations of the concentration data.
- Table S3. Table 3 of the bayesmarker input file, the parent-metabolite map.
- Table S4. Exposure estimates (median and 95% credible intervals) for all parent chemicals using the most recent NHANES cohort concentration data of the metabolites.
- Table S5. Log2 fold change in the median predicted exposure between each population group and the median exposure across all individuals for all parent chemicals.
- Table S6. Fold changes with 95% confidence intervals for all chemical-population group pairs in Figure 4 that had significant differences in exposure compared to the total population.
- Table S7. Bioactivity:exposure ratios (BER) for parent chemicals of NHANES metabolites with 95% confidence intervals.
- Table S8. Fold change in exposure between all NHANES participants and children population groups (age 3 to 5 and age 6 to 11).
- Table S9. Comparison of bayesmarker exposure inferences to SEEM predictions for chemicals not in the SEEM calibration set for the four most recent NHANES cohorts.  
R-squared values and 95% CIs for comparison of bayesmarker exposure inferences and
- Table S10. SEEM predictions for chemicals not in the SEEM training set for the four most recent NHANES cohorts.

Table S1. Table 1 of the bayesmarker input file, the metabolites table. Lists metabolite, NHANES code, cohort, NHANES file, units, etc.

Notes: A row is included for a metabolite for all NHANES cohorts for which it has data. All the analysis in the manuscript except for the SEEM comparison and uncertainty examination use the data from the most recent cohort. Abbreviations: NHANEScode (variable name for metabolite), NHANESfile (file containing the metabolite), recent\_sample (sample in which metabolite was measured), most\_recent\_cohort (yes if this row is the most recent cohort for this metabolite, which would mean it was used in the analyses in the manuscript)

Table S2. Table 2 of the bayesmarker input file, the weights table. Lists other NHANES files and needed columns to perform scaling and other transformations of the concentration data.

Abbreviations: wtvariable (variable code for survey weights), BWfile (file name for bodyweight measurements), BWvariable (columnname in bodyweight file containing the bodyweight measurement), Bwcomment (accompanying column for additional bodyweight data), Examwts (2 year mobile exam unit weights), demofile (name of demographic file), creatfile (name of creatinine file), urineflow (name of urine flow file)

Table S3. Table 3 of the bayesmarker input file, the parent-metabolite map.

Notes: Name, CAS, DTXSID, and MW are identifiers for parent chemicals and those ending with .1 are for metabolites. Abbreviations: Branch (equivalent to  $\phi$  in manuscript equations; 2 if parent is cleaved in half, 1 otherwise), MW (molecular weight)

Name	CAS	DTXSID	Branch	MW	Name.1	CAS.1	DTXSID.1	MW.1
