

Figure S2: Visual predictive check (VPC) of the dose-normalized lumefantrine concentration versus time (A, top) and the first 48 hours after a dose (B, bottom) for all patients with and without ART. The lines represent the median (solid black), 5th and 95th percentiles (dashed red) of the observed data. Blue and red shaded regions represent the 90% prediction interval of the corresponding (i.e., 5th, 50th and 95th) percentiles. Blue circles represent the observed concentrations.
