

Supplementary Fig. 1. Number of uses of each medical institution category during 2010–2019. The total number of visits to medical institutions during the 10-year study period. The use of tertiary, general, and nursing hospitals increased (p for trend <0.001), whereas that of hospitals, clinics, and public health centers decreased (p for trend <0.001). Data are percentages of use in each category among the total use of medical institutions in each year.
