Section and Topic	Item #	Checklist item	Location where item is reported
<b>TITLE</b>			
Title	1	Identify the report as a systematic review.	Pg1
<b>ABSTRACT</b>			
<b>BACKGROUND</b>			
Objectives	2.1	Provide an explicit statement of the main objective(s) or question(s) the review addresses.	Pg2
<b>METHODS</b>			
Eligibility criteria	2.2	Specify the inclusion and exclusion criteria for the review.	Pg2
Information sources	2.3	Specify the information sources (e.g., databases, registers) used to identify studies and the date when each was last searched.	Pg2
Risk of bias	2.4	Specify the methods used to assess risk of bias in the included studies.	Pg2
Synthesis of results	2.5	Specify the methods used to present and synthesise results.	Pg2
<b>RESULTS</b>			
Included studies	2.6	Give the total number of included studies and participants and summarise relevant characteristics of studies.	Pg2
Synthesis of results	2.7	Present results for main outcomes, preferably indicating the number of included studies and participants for each. If meta-analysis was done, report the summary estimate and confidence/credible interval. If comparing groups, indicate the direction of the effect (i.e., which group is favoured).	Pg2
<b>DISCUSSION</b>			
Limitations of evidence	2.8	Provide a brief summary of the limitations of the evidence included in the review (e.g. study risk of bias, inconsistency and imprecision).	Pg2
Interpretation	2.9	Provide a general interpretation of the results and important implications.	Pg2
<b>INTRODUCTION</b>			
Rationale	3	Describe the rationale for the review in the context of existing knowledge.	Pg3-5
Objectives	4	Provide an explicit statement of the objective(s) or question(s) the review addresses.	Pg4
<b>METHODS</b>			
Eligibility criteria	5	Specify the inclusion and exclusion criteria for the review and how studies were grouped for the syntheses.	Pg5-6
Information sources	6	Specify all databases, registers, websites, organisations, reference lists and other sources searched or consulted to identify studies. Specify the date when each source was last searched or consulted.	Pg5-6, Supplementary File 1: Supplementary Table 3
Search strategy	7	Present the full search strategies for all databases, registers and websites, including any filters and limits used.	Supplementary File 1: Search strategy, Supplementary Table 3
Selection process	8	Specify the methods used to decide whether a study met the inclusion criteria of the review, including how many reviewers screened each record and each report retrieved, whether they worked independently, and if applicable, details of automation tools used in the process.	Pg5-7, Supplementary File 1: Search strategy, Supplementary File 1: Supplementary Tables 5 and 6
Data collection process	9	Specify the methods used to collect data from reports, including how many reviewers collected data from each report, whether they worked independently, any processes for obtaining or confirming data from study investigators, and if applicable, details of automation tools used in the process.	Pg7-8, Supplementary File 1: Additional information on data extraction
Data items	10a	List and define all outcomes for which data were sought. Specify whether all results that were compatible with each outcome domain in each study were sought (e.g., for all measures, time points, analyses), and if not, the methods used to decide which results to collect.	Pg7-8, Supplementary File 1: Additional information on data extraction
	10b	List and define all other variables for which data were sought (e.g., participant and intervention characteristics, funding sources). Describe any assumptions made about any missing or unclear information.	Pg6-9, Supplementary File 1: Additional information on data extraction
Study risk of bias assessment	11	Specify the methods used to assess risk of bias in the included studies, including details of the tool(s) used, how many reviewers assessed each study and whether they worked independently, and if applicable, details of automation tools used in the process.	Pg8, 9, 12, Supplementary File 1: Supplementary Tables 7 and 8
Effect measures	12	Specify for each outcome the effect measure(s) (e.g., risk ratio, mean difference) used in the synthesis or presentation of results.	Pg7-9
Synthesis methods	13a	Describe the processes used to decide which studies were eligible for each synthesis (e.g., tabulating the study intervention characteristics and comparing against the planned groups for each synthesis (item #5)).	Pg6-7, Supplementary File:

			Supplementary Table 4
	13b	Describe any methods required to prepare the data for presentation or synthesis, such as handling of missing summary statistics, or data conversions.	Pg7-9
	13c	Describe any methods used to tabulate or visually display results of individual studies and syntheses.	Pg9-10
	13d	Describe any methods used to synthesize results and provide a rationale for the choice(s). If meta-analysis was performed, describe the model(s), method(s) to identify the presence and extent of statistical heterogeneity, and software package(s) used.	Pg8-10
	13e	Describe any methods used to explore possible causes of heterogeneity among study results (e.g., subgroup analysis, meta-regression).	Pg9,12
	13f	Describe any sensitivity analyses conducted to assess robustness of the synthesized results.	Pg8,13
Reporting bias assessment	14	Describe any methods used to assess risk of bias due to missing results in a synthesis (arising from reporting biases).	Pg8, 9
Certainty assessment	15	Describe any methods used to assess certainty (or confidence) in the body of evidence for an outcome.	Pg8
<b>RESULTS</b>			
Study selection	16a	Describe the results of the search and selection process, from the number of records identified in the search to the number of studies included in the review, ideally using a flow diagram.	Pg9-10, Supplementary File 1: Supplementary Figure 1
	16b	Cite studies that might appear to meet the inclusion criteria, but which were excluded, and explain why they were excluded.	Supplementary File 1: Supplementary Tables 4 and 8
Study characteristics	17	Cite each included study and present its characteristics.	Supplementary File 1: Supplementary Table 4
Risk of bias in studies	18	Present assessments of risk of bias for each included study.	Supplementary File 1: Supplementary Table 8, Supplementary File 2: Supplementary Figures 10-15
Results of individual studies	19	For all outcomes, present, for each study: (a) summary statistics for each group (where appropriate) and (b) an effect estimate and its precision (e.g. confidence/credible interval), ideally using structured tables or plots.	Supplementary File 2: Supplementary Figures 1-9 (results given by country)
Results of syntheses	20a	For each synthesis, briefly summarise the characteristics and risk of bias among contributing studies.	Pg9-10, 12, Supplementary File 2: Supplementary Figures 10-15
	20b	Present results of all statistical syntheses conducted. If meta-analysis was done, present for each the summary estimate and its precision (e.g., confidence/credible interval) and measures of statistical heterogeneity. If comparing groups, describe the direction of the effect.	Pg10-13, Supplementary File 2
	20c	Present results of all investigations of possible causes of heterogeneity among study results.	Pg12, 13, Supplementary File 2: Supplementary Figures 1-9
	20d	Present results of all sensitivity analyses conducted to assess the robustness of the synthesized results.	Pg11,13, Supplementary File 2: Supplementary Figures 7-9
Reporting biases	21	Present assessments of risk of bias due to missing results (arising from reporting biases) for each synthesis assessed.	Pg12, Supplementary File 2: Supplementary Figures 10-15
Certainty of evidence	22	Present assessments of certainty (or confidence) in the body of evidence for each outcome assessed.	Pg11, Tables 1-2, Supplementary File 2: Supplementary Figures 1-9
<b>DISCUSSION</b>			
Discussion	23a	Provide a general interpretation of the results in the context of other evidence.	Pg13-15
	23b	Discuss any limitations of the evidence included in the review.	Pg14
	23c	Discuss any limitations of the review processes used.	Pg14
	23d	Discuss implications of the results for practice, policy, and future research.	Pg14-15
<b>OTHER INFORMATION</b>			
Registration and protocol	24a	Provide registration information for the review, including register name and registration number, or state that the review was not registered.	Pg5

	24b	Indicate where the review protocol can be accessed, or state that a protocol was not prepared.	Pg5
	24c	Describe and explain any amendments to information provided at registration or in the protocol.	N/A
Support	25	Describe sources of financial or non-financial support for the review, and the role of the funders or sponsors in the review.	Pg 9, 16
Competing interests	26	Declare any competing interests of review authors.	Pg16
Availability of data, code and other materials	27	Report which of the following are publicly available and where they can be found: template data collection forms; data extracted from included studies; data used for all analyses; analytic code; any other materials used in the review.	Pg5, 16

PRISMA checklist from: Page MJ, McKenzie JE, Bossuyt PM, et al. The PRISMA 2020 statement: an updated guideline for reporting systematic reviews. *BMJ* 2021; **372**: n71.

## Supplementary Table 2. GATHER checklist

Item #	Checklist item	Reported on page #
<b>Objectives and funding</b>		
1	Define the indicator(s), populations (including age, sex, and geographic entities), and time period(s) for which estimates were made.	2, 5, 6-10
2	List the funding sources for the work.	16
<b>Data Inputs</b>		
<i>For all data inputs from multiple sources that are synthesized as part of the study:</i>		
3	Describe how the data were identified and how the data were accessed.	5-7, Supplementary File 1: Supplementary Table 3, Additional information on data extraction
4	Specify the inclusion and exclusion criteria. Identify all ad-hoc exclusions.	6-7
5	Provide information on all included data sources and their main characteristics. For each data source used, report reference information or contact name/institution, population represented, data collection method, year(s) of data collection, sex and age range, diagnostic criteria or measurement method, and sample size, as relevant.	9-10, Supplementary File 1: Supplementary Tables 4 and 6
6	Identify and describe any categories of input data that have potentially important biases (e.g., based on characteristics listed in item 5).	6, 10, Supplementary File 1: Supplementary Table 6
<i>For data inputs that contribute to the analysis but were not synthesized as part of the study:</i>		
7	Describe and give sources for any other data inputs.	6, Supplementary File 1: Supplementary Table 9
<i>For all data inputs:</i>		
8	Provide all data inputs in a file format from which data can be efficiently extracted (e.g., a spreadsheet rather than a PDF), including all relevant meta-data listed in item 5. For any data inputs that cannot be shared because of ethical or legal reasons, such as third-party ownership, provide a contact name or the name of the institution that retains the right to the data.	1
<b>Data analysis</b>		
9	Provide a conceptual overview of the data analysis method. A diagram may be helpful.	7-9
10	Provide a detailed description of all steps of the analysis, including mathematical formulae. This description should cover, as relevant, data cleaning, data pre-processing, data adjustments and weighting of data sources, and mathematical or statistical model(s).	7-9
11	Describe how candidate models were evaluated and how the final model(s) were selected.	8
12	Provide the results of an evaluation of model performance, if done, as well as the results of any relevant sensitivity analysis.	8, 13
13	Describe methods for calculating uncertainty of the estimates. State which sources of uncertainty were, and were not, accounted for in the uncertainty analysis.	8
14	State how analytic or statistical source code used to generate estimates can be accessed.	5
<b>Results and Discussion</b>		
15	Provide published estimates in a file format from which data can be efficiently extracted.	Supplementary File 1: Supplementary Table 6, Supplementary File 2
16	Report a quantitative measure of the uncertainty of the estimates (e.g., uncertainty intervals).	2, 11, 22-25, Supplementary File 1: Supplementary Table 6, Supplementary File 2
17	Interpret results in light of existing evidence. If updating a previous set of estimates, describe the reasons for changes in estimates.	13-14
18	Discuss limitations of the estimates. Include a discussion of any modelling assumptions or data limitations that affect interpretation of the estimates.	14

GATHER checklist from: Stevens GA, Alkema L, Black RE, et al. Guidelines for Accurate and Transparent Health Estimates Reporting: the GATHER statement. *The Lancet* 2016; **388**(10062): e19-e23.

## Search strategy

The following search strategy was employed in PubMed: ((“Prevalence”[MeSH] OR “Incidence”[MeSH]) AND (((sex based OR sex factors OR sex distribution OR sex characteristics OR sex dimorphism OR gender difference\* OR female OR male OR gender OR sex OR women OR men)) AND (prevalence OR incidence OR epidemiol\* OR survey OR rapid assessment OR situation assessment OR situational assessment OR rar OR cohort OR surveillance OR seroprevalence OR seroincidence OR seroepidemiol\* OR screening OR exp epidemiologic methods/ OR exp epidemiologic studies/ OR exp sentinel surveillance/ OR exp seroepidemiologic studies/ OR exp cohort studies/ OR exp cross-sectional studies/ OR exp longitudinal studies/ OR exp follow-up studies/ OR exp prospective studies/)) AND "Dementia"[Mesh]). Similar strategies were employed in Cochrane, ProQuest and GIM. For further details, see Supplementary File 1, Supplementary Table 3.

All hits returned by the search were imported into an Endnote directory. First, three independent reviewers screened titles and abstracts for relevance (NE, RE, KJA, LE, RP). After which, at least two independent reviewers reviewed the selected full-texts articles for eligibility (NE, LE, KJA, HH, RE, RP). Discrepancies in study selection were resolved through discussion and consensus at both stages (KJA, RP, RE, HH, LE). Where multiple publications reported data from the same dataset, the most recent publication was selected.

### **Additional information on data extraction**

Data extraction was conducted separately by two pairs of independent reviewers (HH-LE, LE-RE). For each outcome measure of interest (sex stratified dementia prevalence, and dementia incidence), study details were extracted including the year of assessment, country and region from which study sample was drawn, total sample size, number of males and females, dementia subtypes, age band, and dementia prevalence or incidence rate within specific age-ranges with associated 95% confidence interval lower limit and upper limit. Data were extracted into excel spreadsheets by one reviewer and checked by a second. Information was not extracted for mild cognitive impairment, or cognitive impairment without dementia.

If papers mentioned a protocol or method paper, or methods being described in a previous paper, these were also checked for data extraction. Websites for large-scale longitudinal cohort studies (e.g., Kungsholmen project) were also checked for missing information. Sample size was based on the sample used for final analyses, or where this information was not provided, the sample size after all final exclusions. Where there was a discrepancy between the final sample size reported in the text, and in results presented in tables, the total N from the table and results section of the published journal article was taken. Years of assessments were extracted based on the initial and final dates of data collection, although this range may include an intermediary period where no data were collection (such as a delay between baseline and commencing follow-up collections).

**Supplementary Figure 1. Study selection flowchart**

**Supplementary Table 4.** Studies meeting inclusion criteria (n=205)

Study	Target measure	Total n	n used in analysis	Sampling population/Country	Gender ratio (male/female) [meta-analysis sample only]	Age range (years)	Year(s) of data collection	Diagnostic tools
Aevansson et al. (1996)	Incidence	320	320	Gothenburg, Sweden	0.42	85-88	1986-1990	Clinical evaluation, CPRS, MMSE, neuroimaging, DSM-III-R, NINCDS-ADRDA

**Supplementary Table 5. Reasons for exclusion following full-text screening (n=263)**

Author	Year	Title	Reason for exclusion
Abell et al.	2018	Association between systolic blood pressure and dementia in the Whitehall II cohort study: Role of age, duration, and threshold used to define hypertension	Relied on medical records for diagnosis
Abner et al.	2019	Tobacco smoking and dementia in a Kentucky cohort: A competing risk analysis	Insufficient data. No sex specific data available
Adersen-Ranberg et al.	2001	Dementia is not inevitable: A population-based study of Danish centenarians	Insufficient data. No sex specific data available
Aguero-Torres et al.	2001	Institutionalization in the elderly: The role of chronic diseases and dementia. Cross-sectional and longitudinal data from a population-based study	Insufficient data. No sex specific data available for baseline
Ahlstrom et al.	2020	A nationwide study of the long-term prevalence of dementia and its risk factors in the Swedish intensive care cohort	Not population based. Participants taken from Swedish Intensive Care database
Akbaraly et al.	2019	Association of midlife diet with subsequent risk for dementia	Relied on medical records for diagnosis
Amaducci et al.	1997	Prevalence of chronic diseases in older Italians: Comparing self-reported and clinical diagnoses	Insufficient data. No sex specific data available at baseline
Andersen et al.	1999	Gender differences in the incidence of AD and vascular dementia: The EURODEM Studies. EURODEM Incidence Research Group	Pooled analysis of EURODEM studies
Andreasen et al.	1999	Prevalence and incidence of clinically diagnosed memory impairments in a geographically defined general population in Sweden: The Pitea dementia project	Prevalence of memory impairment, not dementia
Andreu-Reinon et al.	2019	Ascertainment of Dementia Cases in the Spanish European Prospective Investigation into Cancer and Nutrition-Murcia Cohort	Relied on medical records for diagnosis
Anstey et al.	2010	Estimates of probable dementia prevalence from population-based surveys compared with dementia prevalence estimates based on meta-analyses.	Prevalence on probable dementia and possible cognitive impairment
Anstey et al.	2013	Characterizing mild cognitive disorders in the young-old over 8 years: Prevalence, estimated incidence, stability of diagnosis, and impact on IADLs	Incidence not available in 5-year age groups
Arai	1996	Prevalence of dementia in Japan	Letter to the editor
Armstrong et al.	2018	Late-life depressive symptoms as partial mediators in the associations between subclinical cardiovascular disease with onset of mild cognitive impairment and dementia	Insufficient data. No sex specific data available. Dementia data separated by cardiovascular disease diagnosis
Aronson et al.	1991	Dementia. Age-dependent incidence, prevalence, and mortality in the old old	Not population based. Bronx ageing study recruited volunteers
Asada et al.	1996	Prevalence of dementia and distribution of ApoE alleles in Japanese centenarians: An almost-complete survey in Yamanashi Prefecture, Japan	Insufficient data. No sex specific data available
Aspell et al.	2019	Predicting admission to long-term care and mortality among community-based, dependent older people in Ireland	Relied on medical records for diagnosis
Astell-Burt et al.	2018	Is the risk of developing Alzheimer's disease really higher in rural areas? A multilevel longitudinal study of 261,669 Australians aged 45 years and older tracked over 11 years	Relied on medical records for diagnosis (medication prescriptions)
Atti et al.	2008	Late-life body mass index and dementia incidence: Nine-year follow-up data from the Kungsholmen Project	Insufficient data. No sex specific data available

Beam et al.	2018	Differences between women and men in incidence rates of dementia and Alzheimer's disease	Incidence rate not available according to age group
Beard et al.	1991	Is the prevalence of dementia changing?	Diagnosis based on medical records only
Beard et al.	1995	The prevalence of dementia is changing over time in Rochester, Minnesota	Relied on medical records for diagnosis
Bebe et al.	2019	The Effect of Economic Assets on Mortality in Patients with Dementia: A Population-Based Cohort Study	Relied on medical records for diagnosis
Ben-Arie et al.	1983	The coloured elderly in Cape Town--a psychosocial, psychiatric and medical community survey. Part II. Prevalence of psychiatric disorders	Insufficient data. No sex specific data available
Berr et al.	2005	Prevalence of dementia in the elderly in Europe	Review
Beydoun et al.	2008	Association of adiposity status and changes in early to mid-adulthood with incidence of Alzheimer's disease	Insufficient data. No sex specific data available
Beydoun et al.	2012	Sex differences in the association of the apolipoprotein E epsilon 4 allele with incidence of dementia, cognitive impairment, and decline	Excluded Hispanics from the BLSA so not representative
Beydoun et al.	2020	Midlife obesity, related behavioral factors, and the risk of dementia in later life	Relied on medical records for diagnosis
Binder et al.	2019	A multi-state model based reanalysis of the Framingham Heart Study: Is dementia incidence really declining?	Simulation study
Boersma et al.	1998	Prevalence of dementia in a rural Netherlands population and the influence of DSM-III-R and CAMDEX criteria for the prevalence of mild and more severe forms	Not population based
Bouscaren et al.	2018	Prevalence of toxoplasmosis and its association with dementia in older adults in Central Africa: A result from the EPIDEMCA programme	Included in another study of the same population (Guerchet et al 2010)
Brayne	2006	Incidence of dementia in England and Wales: The MRC Cognitive Function and Ageing Study	Incidence is reported as OR only
Brayne et al.	1998	Cognitive function and dementia in six areas of England and Wales: The distribution of MMSE and prevalence of GMS organicity level in the MRC CFA study	Insufficient data. No diagnosis provided. Only MMSE scores provided
Brayne et al.	1995	Incidence of clinically diagnosed subtypes of dementia in an elderly population	Not population based. Used family doctor as sampling frame
Buckley et al.	2018	Sex, amyloid, and APOE epsilon4 and risk of cognitive decline in preclinical Alzheimer's disease: Findings from three well-characterized cohorts	Insufficient data. No dementia diagnosis provided
Carey et al.	2018	Are noise and air pollution related to the incidence of dementia? A cohort study in London, England	Relied on medical records for diagnosis
Cerasuolo et al.	2019	Evidence of concomitantly increasing stroke and dementia prevalence among those 80 years and older in Ontario, Canada, 2003-04 to 2012-13	Relied on medical records for diagnosis
Cesar et al.	2016	Prevalence of cognitive impairment without dementia and dementia in Tremembe, Brazil	Insufficient data. No sex specific data available
Chan et al.	2013	Epidemiology of Alzheimer's disease and other forms of dementia in China, 1990-2010: A systematic review and analysis	Systematic review
Chandra et al.	1998	Prevalence of Alzheimer's disease and other dementias in rural India. The Indo-US study	Diagnosis is based on only CDR
Chaves et al.	2009	Incidence of mild cognitive impairment and Alzheimer disease in Southern Brazil	Insufficient data. No sex specific data available
Chen et al.	2011	Incident dementia in a defined older Chinese population.	Relied on medical records for diagnosis

Chene et al.	2015	Gender and incidence of dementia in the Framingham Heart Study from mid-adult life	Insufficient data. Survival model used to estimate lifetime risk of dementia rather than report observed incidence
Chieh-Ching et al.	2019	Gender and age differences and the trend in the incidence and prevalence of dementia and Alzheimer's disease in Taiwan: A 7-year national population-based study	Uses the Taiwan National Health Insurance Research Database
Copeland et al.	1992	Alzheimer's disease, other dementias, depression and pseudodementia: Prevalence, incidence and three-year outcome in Liverpool	Not population based. Used data from general practitioner's list
Copeland et al.	1992	Geriatric Mental State-AGECAT: Prevalence, incidence and long-term outcome of dementia and organic disorders in the Liverpool study of continuing health in the community	Insufficient data. No sex specific data available
Copeland et al.	1999	Undifferentiated dementia, Alzheimer's disease and vascular dementia: Age- and gender-related incidence in Liverpool. The MRC-ALPHA Study	Not population based. Used data from general practitioner's list
Corrada et al.	1995	Sources of variability in prevalence rates of Alzheimer's disease	Insufficient data. Does not report dementia prevalence. Study testing sources of variability in dementia prevalence
Crooks et al.	2008	Social network, cognitive function, and dementia incidence among elderly women	Insufficient data. Data provided for women only
Dang et al.	2019	Superior memory reduces 8-year risk of mild cognitive impairment and dementia but not amyloid beta-associated cognitive decline in older adults	Data separated by superager status
Darweesh et al.	2019	Quantitative gait, cognitive decline, and incident dementia: The Rotterdam Study	Data on incident dementia separated by gait status
Das et al.	2006	A random sample survey for prevalence of major neurological disorders in Kolkata	Cohort already appears in meta-analysis sample (Das et al. 2008)
Davies-Kershaw et al.	2018	Vision impairment and risk of dementia: Findings from the English Longitudinal Study of Ageing	Insufficient data. No sex specific data available for dementia. Dementia data separated by self-reported vision
de Pedro-Cuesta et al.	2009	Prevalence of dementia and major dementia subtypes in Spanish populations: A reanalysis of dementia prevalence surveys, 1990-2008	Re-analyses of existing data
del Barrio et al.	2005	Dementia, stroke and Parkinson's disease in Spanish populations: A review of door-to-door prevalence surveys	Review of prevalence studies
Demmer et al.	2020	Periodontal disease and incident dementia: The Atherosclerosis Risk in Communities Study (ARIC)	Insufficient data. No sex specific data available
Derby et al.	2017	Trends in dementia incidence in a birth cohort analysis of the Einstein Aging Study	Insufficient data. No sex specific data available
Devanand et al.	1996	Depressed mood and the incidence of Alzheimer's disease in the elderly living in the community	Not population based. Sample included referrals by community-based healthcare providers
Dodge et al.	2012	Trends in the prevalence of dementia in Japan	Review
Doi et al.	2018	Combined effects of mild cognitive impairment and slow gait on risk of dementia	Relied on medical records for diagnosis
Dong et al.	2007	The prevalence of dementia in the People's Republic of China: A systematic analysis of 1980-2004 studies	Systematic analysis
Dubois & Hebert	2001	The incidence of vascular dementia in Canada: A comparison with Europe and East Asia	Not populated based. Sampled from health insurance database
Dubois et al.	2001	The incidence of vascular dementia in Canada: A comparison with Europe and East Asia	Comparison of primary studies
Edland et al.	2002	Dementia and Alzheimer disease incidence rates do not vary by sex in Rochester, Minn	Relied on medical records for diagnosis

Erkinjuntti et al.	1997	The effect of different diagnostic criteria on the prevalence of dementia.	Analysis of data from the Canadian Study of Health and Aging
Evans et al.	1997	Apolipoprotein E 4 and incidence of Alzheimer disease in a community population of older persons	Insufficient data. No sex specific data available
Evans et al.	2003	Incidence of Alzheimer disease in a biracial urban community: Relation to apolipoprotein E allele status	Insufficient data. No sex specific data available
Fagundes et al.	2011	Prevalence of dementia among elderly Brazilians: A systematic review	Systematic review
Fancourt et al.	2018	Cultural engagement and cognitive reserve: Museum attendance and dementia incidence over a 10-year period	Insufficient data. No sex specific data available. Dementia data separated by cultural engagement
Fancourt et al.	2019	OP24 Social and cultural engagement and dementia incidence: Comparisons of different time-to-event analyses using the English Longitudinal Study of Ageing	Insufficient data. No sex specific data available. Dementia data separated by cultural engagement
Fani et al.	2018	Helicobacter pylori and the risk of dementia: A population-based study.	Insufficient data. No sex specific data available
Fani et al.	2020	Telomere length and the risk of Alzheimer's disease: The Rotterdam Study	Insufficient data. No sex specific data available for dementia
Farron et al.	2020	Hypertension and cognitive health among older adults in India	Insufficient data. No sex specific data available for dementia
Fereshtehnejad et al.	2019	Burden of neurodegenerative diseases in the Eastern Mediterranean Region, 1990-2016: Findings from the Global Burden of Disease Study 2016	Uses a meta-analytical approach to data collection (including non-population-based samples). Only reports prevalence data by sex for elderly population (aged >70 years)
Folstein et al.	1991	Dementia: Case ascertainment in a community survey	Insufficient data. No sex specific data available
Fowler et al.	2018	Patient characteristics associated with screening positive for Alzheimer's disease and related dementia	Not population based. Sample taken from primary care patients
Fratiglioni et al.	1994	Severity of dementia and institutionalization in the elderly: Prevalence data from an urban area in Sweden	Diagnosis based on CDR only
Fratiglioni et al.	2000	Incidence of dementia and major subtypes in Europe: A collaborative study of population-based cohorts	Pooled 8 studies. Individual studies sourced
Fu et al.	2020	Age- and sex-specific prevalence and modifiable risk factors of mild cognitive impairment among older adults in China: A population-based observational study	Insufficient data. No dementia diagnosis provided (MCI only)
Ganguli et al.	2015	Rates and risk factors for progression to incident dementia vary by age in a population cohort	No method of diagnosis specified other than clinical dementia rating (CDR)
Gao et al.	1998	The relationships between age, sex, and the incidence of dementia and Alzheimer disease: A meta-analysis	Conference abstract
Gao et al.	2016	Dementia incidence declined in African-Americans but not in Yoruba	Insufficient data. No sex specific data available
George-Carey et al.	2012	An estimate of the prevalence of dementia in Africa: A systematic analysis	Systematic analysis
Giem et al.	1993	The incidence of dementia and intake of animal products: Preliminary findings from the Adventist Health Study	Insufficient data. No sex specific data available
Gislason et al.	2015	Effect of diagnostic criteria on prevalence of frontotemporal dementia in the elderly	Analysis of data from other studies to get the effect of diagnostic criteria on prevalence
Golive et al.	2018	The impact of gender on atrial fibrillation incidence and progression to dementia	Relied on medical records for diagnosis
Gracia-Rebled et al.	2020	The effect of occupation on the incidence of vascular dementia: A 12-year follow-up cohort study	Insufficient data. No person-years reported, incidence not available in 5-year age groups
Graham et al.	1997	Prevalence and severity of cognitive impairment with and without dementia in an elderly population	CSHA cohort already appears in meta-analysis sample (ID 109)

Grasset et al.	2018	Temporal trends in the level and decline of cognition and disability in an elderly population: The PAQUID Study	Insufficient data. No dementia diagnosis provided
Guo et al.	2018	Increased risk for dementia both before and after stroke: A population-based study in women followed over 44 years	Sample includes women only
Gureje et al.	2011	Incidence of and risk factors for dementia in the Ibadan study of aging	Cohort already appears in meta-analysis sample (Ogunniyi et al. 2000)
Gurland et al.	1999	Rates of dementia in three ethnorracial groups	Insufficient data. No sex specific data available
Hagnell et al.	1983	Current trends in the incidence of senile and multi-infarct dementia. A prospective study of a total population followed over 25 years; the Lundby Study	Lundby study cohort already appears in meta-analysis sample (Hagnell et al. 1992)
Hagnell et al.	1991	Senile dementia of the Alzheimer type in the Lundby Study. I. A prospective, epidemiological study of incidence and risk during the 15 years 1957-1972	Non-standard diagnosis of dementia
Hajjar et al.	2002	The impact of the use of statins on the prevalence of dementia and the progression of cognitive impairment	Study of impact of statins on dementia prevalence, not true prevalence estimate
Hall et al.	2009	Prevalence rates for dementia and Alzheimer's disease in African Americans: 1992 versus 2001	Insufficient data. No sex specific data available
Hebert et al.	1995	Age-specific incidence of Alzheimer's disease in a community population	Insufficient data. No sex specific data available
Hebert et al.	2001	Is the risk of developing Alzheimer's disease greater for women than for men?	Sample duplicated and incidence is reported as OR only
Hebert et al.	2003	Alzheimer disease in the US population: Prevalence estimates using the 2000 census	Insufficient data. No sex specific data available
Hendrie et al.	1993	Alzheimer's disease is rare in Cree	Insufficient data. No sex specific data available
Hendrie et al.	1995	Prevalence of Alzheimer's disease and dementia in two communities: Nigerian Africans and African Americans	Insufficient data. No sex specific data available
Hendrie et al.	2001	Incidence of dementia and Alzheimer disease in 2 communities: Yoruba residing in Ibadan, Nigeria, and African Americans residing in Indianapolis, Indiana	Sampling from Manitoba's Health insurance database
Heneka et al.	2015	Effect of pioglitazone medication on the incidence of dementia	Relied on medical records for diagnosis
Heser et al.	2019	Subjective cognitive decline may be a stronger predictor of incident dementia in women than in men	Not population based. Sample drawn from patients of primary care physicians
Heyman et al.	1991	Estimated prevalence of dementia among elderly Black and White community residents	Not population based
Hilal et al.	2013	Prevalence of cognitive impairment in Chinese: Epidemiology of dementia in Singapore study	Does not separate dementia from cognitive impairment
Hofman et al.	1991	The prevalence of dementia in Europe: A collaborative study of 1980-1990 findings	Pooled analysis of EURODEM studies
Hofman et al.	1997	Atherosclerosis, apolipoprotein E, and prevalence of dementia and Alzheimer's disease in the Rotterdam Study	Rotterdam cohort already appears in meta-analysis sample (ID 015)
Holm et al.	2020	Beta-blocker therapy and risk of vascular dementia: A population-based prospective study	Data based on matched case-control on beta blockers
Honda et al.	2016	Trends in autopsy-verified dementia prevalence over 29 years of the Hisayama study	Autopsy results
Hoskings et al.	2019	MIND not Mediterranean diet related to 12-year incidence of cognitive impairment in an Australian longitudinal cohort study	No sex specific data available. PATH study cohort appears in Anstey et al. 2013
Hussin et al.	2019	Incidence and predictors of mild cognitive impairment (MCI) within a multi-ethnic Asian populace: A community-based longitudinal study	Insufficient data. No dementia diagnosis provided (MCI only)

Hy et al.	2000	Prevalence of AD among whites: A summary by levels of severity	Pooled analysis
Ikeda et al.	2001	Increased prevalence of vascular dementia in Japan: A community-based epidemiological study	Insufficient data. No sex specific data available
Jack et al.	2019	Prevalence of biologically vs clinically defined Alzheimer spectrum entities using the National Institute on Aging–Alzheimer’s Association Research Framework	Not useful
Jacqmin-Gadda et al.	2013	20-Year prevalence projections for dementia and impact of preventive policy about risk factors	Relied on PAQUID data to make prevalence projections till 2030
Johansson et al.	2019	Associations between depression, depressive symptoms, and incidence of dementia in Latin America: A 10/66 Dementia Research Group Study	Insufficient data. No sex specific data available
Jorm et al.	1987	The prevalence of dementia: A quantitative integration of the literature	Quantitative integration of literature
Jorm et al.	1998	The incidence of dementia: A meta-analysis	Meta-analysis
Juva et al.	1993	Prevalence of dementia in the city of Helsinki	Point prevalence data only available for specific ages, not age group
Kalaria et al.	2008	Alzheimer’s disease and vascular dementia in developing countries: Prevalence, management, and risk factors	Review
Kamalzadeh et al.	2019	Prevalence of dementia among older patients: A hospital-based study in Iran	Not population based. Sample drawn from hospital inpatients
Kawano et al.	1990	Prevalence of dementia in a Japanese community (Hisayama): Morphological reappraisal of the type of dementia	Cohort already appears in meta-analysis (Fujishima & Kiyohara, 2002)
Kim et al.	2011	Synergistic associations of depression and apolipoprotein E genotype with incidence of dementia	Incidence as proportion
Kinoshita et al.	2019	Comparison of mental cognitive function of A-bomb survivors and non-A-bomb survivors in Nagasaki	Insufficient data. No dementia diagnosis provided
Kiyohara et al.	1994	Changing patterns in the prevalence of dementia in a Japanese community: The Hisayama study	Insufficient data. Prevalence estimates not provided in-text
Kodesh	2018	Prevalence and comorbidities of dementia in Israel: A nationally representative cohort study	Relied on medical records for diagnosis
Kvello-Alme et al.	2019	The prevalence and subtypes of young onset dementia in central Norway: A population-based study	Young onset dementia <65 years
Lam et al.	2008	Prevalence of very mild and mild dementia in community-dwelling older Chinese people in Hong Kong	Diagnosis based only on CDR
Langa et al.	2017	A comparison of the prevalence of dementia in the United States in 2000 and 2012	Insufficient data. No sex specific data available
Larrea et al.	2000	Prevalence of cognitive impairment and dementia as defined by neuropsychological test performance	Review
Launer et al.	1999	Rates and risk factors for dementia and Alzheimer’s disease: Results from EURODEM pooled analyses	Pooled analysis of EURODEM studies
Lee et al.	2019	Risk of incident dementia according to metabolic health and obesity status in late life: A population-based cohort study	Insufficient data. No sex specific data available for dementia
Lee et al.	2019	Analysis of combined incident and prevalent cohort data under a proportional mean residual life model	Insufficient data. No sex specific data available for dementia. Paper describing specific model
Letenneur et al.	1994	Incidence of dementia and Alzheimer’s disease in elderly community residents of south-western France	Cohort already appears in meta-analysis sample (Letenneur et al. 1999)

Letenneur et al.	2000	Education and the risk for Alzheimer's disease: Sex makes a difference. EURODEM pooled analyses	Pooled analysis of EURODEM studies
Lethin et al.	2019	Prevalence of dementia diagnoses not otherwise specified in eight European countries: A cross-sectional cohort study	Not population based
Li et al.	2014	Sex differences in cognitive impairment and Alzheimer's disease	Review
Liu et al.	1995	Prevalence and subtypes of dementia in Taiwan: A community survey of 5297 individuals	Data for age grouping not recorded in a way compatible with other studies
Liu et al.	2003	Prevalence of Dementia in China	Pooled analysis
Liu et al.	2009	Chronic disease prevalence and care among the elderly in urban and rural Beijing, China - a 10/66 Dementia Research Group cross-sectional survey	Insufficient data. No sex specific data available
Liu et al.	2019	Gender and age differences and the trend in the incidence and prevalence of dementia and Alzheimer's disease in Taiwan: A 7-year national population-based study	Relied on medical records for diagnosis
Livingston et al.	2001	Mental health of migrant elders--the Islington study	Insufficient data. No sex specific data available
Llibre Rodriguez et al.	2008	The prevalence, correlates and impact of dementia in Cuba. A 10/66 group population-based survey	Cuban 10-66 cohort already appears in meta-analysis sample (ID 083)
Llibre-Rodriguez et al.	2017	Cuba's Aging and Alzheimer Longitudinal Study	Methodology paper
Lo Giudice et al.	2016	Incidence and predictors of cognitive impairment and dementia in Aboriginal Australians: A follow-up study of 5 years	Insufficient data. No sex specific data available
Lobo et al.	1992	Incidence of dementia and other psychiatric conditions in the elderly: Zaragoza Study	Insufficient data. Only study description, no results
Lobo et al.	2000	Prevalence of dementia and major subtypes in Europe: A collaborative study of population-based cohorts	Pooled analysis
Loef & Walach	2013	Midlife obesity and dementia: Meta-analysis and adjusted forecast of dementia prevalence in the United States and Chin	Meta-analysis
Lopes et al	2010	Prevalence of alcohol-related problems in an elderly population and their association with cognitive impairment and dementia	Cohort already appears in meta-analysis sample (Lopes et al. 2012)
Lopes et al.	2007	Systematic review of dementia prevalence-1994 to 2000	Systematic review
Magaziner et al.	2000	The prevalence of dementia in a statewide sample of new nursing home admissions aged 65 and older: Diagnosis by expert panel	Insufficient data. No sex specific data available
Manton et al.	2005	Declining prevalence of dementia in the U.S. elderly population	Non-standard diagnosis of dementia (severe cognitive impairment)
Mariana Franciosi et al.	2006	Neuropsychiatric symptoms in alzheimer disease and cognitively impaired, nondemented elderly from a community-based sample in Brazil: Prevalence and relationship with dementia severity	Prevalence of neuropsychiatric symptoms in dementia
Marseglia et al.	2019	Participating in mental, social, and physical leisure activities and having a rich social network reduce the incidence of diabetes-related dementia in a cohort of Swedish older adults	Insufficient data. No sex specific data available for dementia. Dementia data separated by diabetes status
Matsui et al.	2009	Incidence and survival of dementia in a general population of Japanese elderly: The Hisayama Study	Insufficient data. No sex specific data available. Adjusted dementia for sex. Used sex-matched controls
Mavrodaris et al.	2013	Prevalences of dementia and cognitive impairment among older people in sub-Saharan Africa: A systematic review	Systematic review

Mayeda et al.	2016	Inequalities in dementia incidence between six racial and ethnic groups over 14 years	Relied on medical records for diagnosis
Mehlig et al.	2008	Alcoholic beverages and incidence of dementia: 34-year follow-up of the prospective population study of women in Göteborg	Insufficient data. Data provided for women only
Meguro et al.	2012	Prevalence of dementia and dementing diseases in the old-old population in Japan: The Kurihara Project. Implications for long-term care insurance data	Diagnosis based only on CDR
Mekawichai & Choeikamhaeng	2013	The prevalence and the associated factors of dementia in patients with Parkinson's disease at Maharat Nakhon Ratchasima Hospital	Sample of patients with Parkinson's disease
Morgan et al.	1992	Incidence of dementia: Preliminary findings from the Nottingham Longitudinal Study of Activity and Ageing	Duplicate of findings recorded in Morgan et al. 1993
Morgan et al.	1993	Incidence of dementia in a representative British sample	Incidence as proportion
Nepal et al.	2014	Rising midlife obesity will worsen future prevalence of dementia	Dementia prevalence projections using estimated data
Newman et al.	2005	Dementia and Alzheimer's disease incidence in relationship to cardiovascular disease in the Cardiovascular Health Study cohort	Incidence as proportion
Nitrini et al.	2009	Prevalence of dementia in Latin America: A collaborative study of population-based cohorts	Review
Noble et al.	2017	Secular trends in the incidence of dementia in a multi-ethnic community	Insufficient data. No sex specific data available
O'Brien et al.	2019	High prevalence of dementia among community dwelling older adults in receipt of state funded home care packages: Implications for health care planning	Not population based. Sample drawn from home care package recipients
Ogunniyi et al.	1992	Rarity of dementia (by DSM-III-R) in an urban community in Nigeria	Insufficient data. No sex specific data available
Ogunniyi et al.	1997	Profile of dementia in a Nigerian community--types, pattern of impairment, and severity rating	Cohort already appears in meta-analysis sample (Ogunniyi et al. 2000)
Ogunniyi et al.	2016	Prevalence estimates of major neurocognitive disorders in a rural Nigerian community	Insufficient data. No sex and age specific data available. Requested from authors but not received
Okamura et al.	2013	Prevalence of dementia in Japan: A systematic review	Systematic review
Onishi	2013	The challenge of estimating the prevalence of dementia in the elderly	Sample of frail elderly only
Ott et al.	1999	Education and the incidence of dementia in a large population-based study: The Rotterdam Study	Cohort already appears in meta-analysis sample (Ott et al. 1998). Earlier article included as the latter one stratifies incidence rates by years of education
Ouanes et al.	2014	Prevalence and management of dementia in nursing home residents in Tunisia	Not population based. Nursing homes only
Parlevliet et al.	2016	Prevalence of mild cognitive impairment and dementia in older non-Western immigrants in the Netherlands: A cross-sectional study	Insufficient data. No sex specific data available
Payami et al.	1996	Gender difference in apolipoprotein E-associated risk for familial Alzheimer disease: A possible clue to the higher incidence of Alzheimer disease in women	Sample of people who were first degree relatives of individuals with late onset familial Alzheimer's disease
Paykel et al.	1994	Incidence of dementia in a population older than 75 years in the United Kingdom	Cohort already appears in meta-analysis sample (Paykel et al. 1998)
Pendlebury & Rothwell	2009	Prevalence, incidence, and factors associated with pre-stroke and post-stroke dementia: A systematic review and meta-analysis	Systematic review
Pendlebury et al.	2019	Incidence and prevalence of dementia associated with transient ischaemic attack and stroke: Analysis of the population-based Oxford Vascular Study	Not population based. Sample drawn from patients of primary care physicians
Perales-Puchalt et al.	2019	Cardiovascular health and dementia incidence among older adults in Latin America: Results from the 10/66 Study	Repetition

Perkins et al.	1997	Incidence and prevalence of dementia in a multiethnic cohort of municipal retirees	Not population based
Piguet et al.	2003	Vascular risk factors, cognition and dementia incidence over 6 years in the Sydney older persons study	Insufficient data. No sex specific data available
Plassman et al.	2011	Incidence of dementia and cognitive impairment, not dementia in the United States	Insufficient data. No sex specific data available
Plato et al.	2003	Amyotrophic lateral sclerosis and parkinsonism-dementia complex of Guam: Changing incidence rates during the past 60 years	Study of parkinsonism-dementia
Porter et al.	2008	Prevalence of AIDS dementia complex: Results from a statewide population-based registry of Alzheimer's disease and related disorders	Prevalence of AIDS dementia complex
Prince et al.	2011	Leg length, skull circumference, and the prevalence of dementia in low and middle income countries: A 10/66 population-based cross sectional survey	Primary outcome effect of skull length and leg length on dementia
Prince et al.	2013	The global prevalence of dementia: A systematic review and metaanalysis	Systematic review
Qiu et al.	2001	The influence of education on clinically diagnosed dementia incidence and mortality data from the Kungsholmen project	Insufficient data. No sex specific data available
Radford et al.	2019	Factors associated with the high prevalence of dementia in older Aboriginal Australians	Cohort already appears in systematic review sample (Radford et al. 2015). No new data is provided
Rajan et al.	2019	Prevalence and incidence of clinically diagnosed Alzheimer's disease dementia from 1994 to 2012 in a population study	Insufficient data. No sex specific data available for dementia
Rajkumar et al.	1997	Prevalence of dementia in a rural setting: A report from India	Cohort already appears in meta-analysis sample (Rajkumar et al. 1996). Earlier article included as it includes both urban and rural data, whereas this article includes only rural data
Rana et al.	2012	Prevalence and relation of dementia to various factors in Parkinson's disease	Prevalence of dementia in Parkinson's
Rasquin et al.	2005	The effect of different diagnostic criteria on the prevalence and incidence of post-stroke dementia	Examining effect of diagnostic criteria on prevalence. Sample of first ever stroke patients
Ratnavalli et al.	2002	The prevalence of frontotemporal dementia	Early onset dementia only
Relgia et al.	2012	Dementia diagnosis differs in men and women and depends on age and dementia severity: Data from SveDem, the Swedish Dementia Quality Registry	Insufficient data. No prevalence estimates provided, just dementia diagnosis
Renvoize et al.	2011	Prevalence and causes of young onset dementia in an English health district	Letter to the editor
Richardson et al.	2019	Two-decade change in prevalence of cognitive impairment in the UK	Insufficient data. No sex specific data available for dementia
Riedel-Heller et al.	2000	Recruitment procedures and their impact on the prevalence of dementia: Results from the Leipzig Longitudinal Study of the aged (LEILA75+)	Insufficient data. Procedural paper - Gender specific prevalence rates not included
Roberts et al.	2018	Prevalence and outcomes of amyloid positivity among persons without dementia in a longitudinal, population-based setting	Insufficient data. Sex specific data only provided for MCI and separated by B amyloid status
Robertson et al.	2019	Using varying diagnostic criteria to examine mild cognitive impairment prevalence and predict dementia incidence in a community-based sample	Insufficient data. No sex specific data available for dementia
Rocca & Kokmen	1999	Frequency and distribution of vascular dementia	Review
Rocca et al.	1991	Frequency and distribution of Alzheimer's disease in Europe: A collaborative study of 1980-1990 prevalence findings	Insufficient data. Comments on difficulties of finding accurate results, not a prevalence study
Rocca et al.	1991	The prevalence of vascular dementia in Europe: Facts and fragments from 1980-1990 studies	Pooled analysis
Rocca et al.	1998	Incidence of dementia and Alzheimer's disease	Data drawn from medical records

Rocca et al.	2011	Trends in the incidence and prevalence of Alzheimer's disease, dementia, and cognitive impairment in the United States	Insufficient data. No sex specific data available
Roubaud Baudron et al.	2013	Does <i>Helicobacter pylori</i> infection increase incidence of dementia? The Personnes Agees QUID Study	Insufficient data. No sex specific data available
Ryan	1994	Age-specific hospital incidence rates in dementia. A record linkage study of first-admission rates to Scottish hospitals (1968-1987)	Incidence based on admission rates
Sanderson et al.	2003	Application of capture-recapture methodology to estimate the prevalence of dementia in South Carolina	Relied on medical records for diagnosis
Santabárbara et al.	2019	Clinically significant anxiety as a risk factor for dementia in the elderly community	Insufficient data. No sex specific data available for dementia.
Satizabal et al.	2016	Incidence of dementia over three decades in the Framingham Heart Study	Incidence is reported as HR only
Savica et al.	2013	Incidence of dementia with Lewy bodies and Parkinson disease dementia	Lewy body and Parkinson's dementia
Saz et al.	2009	Prevalence and implications of psychopathological non-cognitive symptoms in dementia	Prevalence of neuropsychiatric symptoms in dementia
Scandol et al.	2013	Fall-related hip fracture hospitalisations and the prevalence of dementia within older people in New South Wales, Australia: An analysis of linked data	Sample of participants who had hip fractures
Schoenberg et al.	1987	Alzheimer's disease and other dementing illnesses in a defined United States population: Incidence rates and clinical features	Relied on medical records for diagnosis
Schroppel et al.	1996	Incidence of dementia in the elderly: Review of age and sex effects	Review
Seitz et al.	2011	Prevalence of dementia and cognitive impairment among older adults with hip fractures	Sample of participants who had hip fractures
Sicras et al.	2005	Prevalence, resource utilization and costs of vascular dementia compared to Alzheimer's dementia in a population setting	Insufficient data. No sex specific data available
Small et al.	1997	Mini-Mental State Examination item scores as predictors of Alzheimer's disease: Incidence data from the Kungsholmen Project, Stockholm	Incidence as proportion
Sposato et al.	2015	Declining incidence of stroke and dementia: Coincidence or prevention opportunity?	Letter to the editor. Used health insurance databases for sampling
Stern et al.	1994	Influence of education and occupation on the incidence of Alzheimer's disease	Insufficient data. No sex specific data available
Strydom et al.	2009	The relationship of dementia prevalence in older adults with intellectual disability (ID) to age and severity of ID	Insufficient data. No sex specific data available
Taipale et al.	2014	High prevalence of psychotropic drug use among persons with and without Alzheimer's disease in Finnish nationwide cohort	Insufficient data. No dementia prevalence estimates. Sample was matched by age, gender and region
Takasugi et al.	2019	Socio-economic status and dementia onset among older Japanese: A 6-year prospective cohort study from the Japan Gerontological Evaluation Study	JAGES study - used long-term care insurance records rather than assessment validated against clinical dementia diagnosis
Tamaki et al.	2020	Risk factors for dementia incidence based on previous results of the specific health checkups in Japan	Not population based. Sample drawn from long term care insurance services
Tang et al.	2001	Incidence of AD in African-Americans, Caribbean Hispanics, and Caucasians in northern Manhattan	Sample from health insurance database
Tari et al.	2019	Temporal changes in cardiorespiratory fitness and risk of dementia incidence and mortality: A population-based prospective cohort study	Insufficient data. No sex specific data available for dementia. Dementia incidence separated by cardiovascular fitness
Thies et al.	2013	2013 Alzheimer's disease facts and figures	Report
Tsoy et al.	2019	Prevalence of mild cognitive impairment among older people in Kazakhstan and potential risk factors: A cross-sectional study	Insufficient data. No dementia diagnosis provided (MCI only)

Tyas et al.	2006	Estimating the incidence of dementia: The impact of adjusting for subject attrition using health care utilization data	Diagnosis made on basis of medical/hospital records
Urakami et al.	1998	Epidemiologic and genetic studies of dementia of the Alzheimer type in Japan	Insufficient data. No sex specific data available
Vann Jones et al.	2014	The prevalence and incidence of dementia with Lewy bodies: A systematic review of population and clinical studies	Systematic review
Varghese	2005	Dementia prevalence	Correspondence
Wakutani et al.	2007	Longitudinal changes in the prevalence of dementia in a Japanese rural area	Insufficient data. No sex specific data available
Wancata et al.	2003	Number of dementia sufferers in Europe between the years 2000 and 2050	Results taken from meta-analyses
Wancata et al.	2007	Diagnostic criteria influence dementia prevalence	Primarily outcome is influence of diagnostic criteria
Wandell et al.	2019	Dementia in immigrant groups: A cohort study of all adults 45 years of age and older in Sweden	Relied on medical records for diagnosis
Wang et al.	1998	Investigation of senile dementia in Qingdao	Insufficient data. No data on prevalence or incidence
Wangtongkum et al.	2008	Prevalence of dementia among population age over 45 years in Chiang Mai, Thailand	Insufficient data. No sex specific data available
Waring et al.	2004	Incidence of amyotrophic lateral sclerosis and of the Parkinsonism-dementia complex of Guam, 1950-1989	On Parkinson-dementia complex
Warren et al.	2015	Prevalence and incidence of dementia among indigenous populations: A systematic review	Systematic review
Weintraub et al.	2000	Racial differences in the prevalence of dementia among patients admitted to nursing homes	Nursing homes only
Wernicke & Reischies	1994	Prevalence of dementia in old age: Clinical diagnoses in subjects aged 95 years and older	Insufficient data. No sex specific data available; overall sample size following dropouts not reported
Weuve et al.	2018	Cognitive aging in Black and White Americans: Cognition, cognitive decline, and incidence of Alzheimer disease dementia	Insufficient data. No sex specific data available
Wiberg et al.	2013	Secular trends in the prevalence of dementia and depression in Swedish septuagenarians 1976-2006	Point prevalence data only available for specific ages, not age group
Wong et al.	2019	Prevalence and risk factors for cognitive impairment and dementia in Indians: A multiethnic perspective from a Singaporean study	Groups cognitive impairment no dementia (CIND moderate) with cases of dementia
Wu et al.	2010	Study on the incidence and risk factors of dementia in elderly residents from communities in Beijing	Incidence not available in 5-year age groups
Wu et al.	2013	Prevalence studies of dementia in mainland china, Hong Kong and Taiwan: A systematic review and meta-analysis	Systematic review
Wu et al.	2014	Period, birth cohort and prevalence of dementia in mainland China, Hong Kong and Taiwan: A meta-analysis	Meta-analysis. Insufficient data. No sex specific data available
Wu et al.	2015	Prevalence of dementia in East Asia: A synthetic review of time trends	Insufficient data. No sex specific data available
Wu et al.	2020	Late-life depression and the risk of dementia in 14 countries: A 10-year follow-up study from the Survey of Health, Ageing and Retirement in Europe	Insufficient data. No country specific data available
Wu et al.	2020	Medium-to-high late-life physical activity is associated with lower risk of incident dementia: The Shanghai Aging Study	Dementia diagnoses grouped based on physical activity levels
Xie et al.	2019	COPD and the risk of mild cognitive impairment and dementia: A cohort study based on the Chinese Longitudinal Health Longevity Survey	Insufficient data. No sex specific data available for dementia

Yamada et al.	1999	Prevalence and risks of dementia in the Japanese population: RERF's adult health study Hiroshima subjects	Not population based. Atomic bomb survivors
Zaccai et al.	2005	A systematic review of prevalence and incidence studies of dementia with Lewy bodies	Systematic review. Insufficient data. No sex specific data available
Zaganas et al.	2019	The Cretan Aging Cohort: Cohort description and burden of dementia and mild cognitive impairment	Not population based. Sample drawn from primary health care facility patients
Zandi et al.	2002	Hormone replacement therapy and incidence of Alzheimer disease in older women: The Cache County Study	Incidence as proportion
Zhang et al.	1998	A preliminary analysis of incidence of dementia in Shanghai, China	Incidence as proportion
Zhang et al.	2006	Socio-demographic variation of dementia subtypes in China: Methodology and results of a prevalence study in Beijing, Chengdu, Shanghai, and Xian	Cohort already appears in meta-analysis (Zhang et al. 2005). Earlier article taken as this article does not provide age and gender specific data
Zhang et al.	2012	Prevalence of dementia and major dementia subtypes in the Chinese populations: A meta-analysis of dementia prevalence surveys, 1980-2010	Meta-analysis
Zhu et al.	2000	Incidence of dementia in relation to stroke and the apolipoprotein E epsilon4 allele in the very old. Findings from a population-based longitudinal study	Dementia incidence stratified by stroke history
Ziegler-Graham et al.	2008	Worldwide variation in the doubling time of Alzheimer's disease incidence rates	Review
Zolot et al.	2016	The incidence of dementia is decreasing	Commentary

---

**Supplementary Table 6.** Summary table of studies included in systematic review but excluded from meta-analysis

Study	Reason for meta-analysis exclusion	Year/s of data collection	Total sample size	Dementia type	Age band	Number of cases	Incidence per 1000 person-years (95% CI)	Prevalence per 1000 people	
Calvó-Perxas et al. (2019)	Special population – used secondary data obtained from health registers	2007-2016	1152	Men (n = 556)					-
				Non-AD	65+	372	7.64 (6.68-8.45)		
				Dementia due to multiple aetiology	65+	107	2.20 (1.80-2.65)		
				Dementia due to other rare cause	65+	77	1.58 (1.24-1.97)		
				Women (n = 596)					-
				Non-AD	65+	405	6.91 (6.25-7.61)		
Dementia due to multiple aetiology	65+	133	2.27 (1.90-2.69)						
Dementia due to other rare cause	65+	58	0.99 (0.75-1.28)						
Meguro et al. (2001)	Special population – exclusively sampled Japanese immigrants living in Brazil	-	166	Men (n = 78)					
				AD	65+	3	-	38.5	
				VaD	65+	2	-	25.6	
				Women (n = 88)					
				AD	65+	4	-	45.5	
VaD	65+	4	-	45.5					
Radford et al. (2015)	Special population – exclusively sampled urban and regional Aboriginal Australians	2008-2012	336	Men (n = 136)					
				Any dementia	60+	24	-	176.5	
				Women (n = 200)					
Any dementia	60+	21	-	105.0					
Rorsman et al. (1986)	Data too old – reported data pre-1972; insufficient data available for pooling estimates from this period	1947-1957	2550	Men (n = 1312)					-
				Any dementia	60-69	2	1.8		
					70-79	8	9.6		
					80-89	6	25.7		
					90+	0	0		
				VaD	60-69	5	4.9		
					70-79	14	17.2		
					80-89	6	27.2		
					90+	0	0		
				Women (n = 1238)					-
				Any dementia	60-69	3	2.6		
70-79	4	5.2							
80-89	11	45.6							

				VaD	90+	1	48.7	-
					60-69	1	0.9	
					70-79	5	6.7	
					80-89	9	37.1	
					90+	0	0	
		1957-1972	2612	Men (n = 1335)				-
		Any dementia	60-69	2	0.8			
			70-79	9	7.5			
			80-89	9	20.1			
			90+	1	5.1			
		VaD	60-69	12	4.9	-		
			70-79	6	4.9			
			80-89	13	28.2			
			90+	4	47.4			
		Women (n = 1277)				-		
		Any dementia	60-69	4	1.5			
			70-79	7	4.7			
			80-89	13	24.3			
			90+	1	18.3			
		VaD	60-69	3	1.2	-		
70-79	17		11.6					
80-89	6		11.3					
90+	0		0					
70-79	17		11.6					
80-89	6		11.3					
90+	0		0					
Yamada et al. (2002)	Special population – exclusively sampled Japanese immigrants living in Brazil	2000	157	Men (n = 70)				
Any dementia	60-69	-	-	-				
	70-79	2	-	39.2				
	80-89	3	-	200.0				
	90+	3	-	750.0				
Women (n = 87)				-				
Any dementia	60-69	-	-		-			
	70-79	2	-		35.7			
	80-89	5	-		208.3			
	90+	4	-	571.4				

## **Supplementary Table 7.** Application of Newcastle-Ottawa quality assessment scale for cohort studies

Note: A maximum of one star can be awarded per question, except for Comparability question 1, where two can be awarded.

### *SELECTION*

- 1) Representativeness of the exposed cohort
  - a) Truly representative of the average age, sex and educational level in the community (i.e., if the study reports using a random sample from a population-based sampling frame, or sampling the entire population) \*
  - b) Somewhat representative of the average age, sex and education level in the community (i.e., the study checks the demographic of the sample against census or other population-based information) \*
  - c) Selected group of users e.g., nurses, volunteers
  - d) No description of the derivation of the cohort
- 2) Selection of the non-exposed cohort
  - a) Drawn from the same community as the exposed cohort \*
  - b) Drawn from a different source
  - c) No description of the derivation of the non-exposed cohort
- 3) Ascertainment of exposure
  - a) Secure record (e.g., surgical records). Also selected if diagnostic procedure produces a result that can be registered as a secure record (i.e., an official diagnosis from qualified expert) \*
  - b) Structured interview – where interview is conducted by trained but non-expert interviewers (i.e., not a physician, psychiatrist, neuropsychologist etc.) \*
  - c) Written self-report
  - d) No description
- 4) Demonstration that outcome of interest was not present at start of study
  - a) Yes \*
  - b) No

### *COMPARABILITY*

- 1) Comparability of cohorts on the basis of the design or analysis
  - a) Study uses baseline sample with similar gender ratio \*
  - b) Study reports cognitive information (if study reports prevalence), or uses baseline sample with no dementia (if study reports incidence) or both (if study reports both prevalence and incidence) \*

### *OUTCOME*

- 1) Assessment of outcome
  - a) Independent blind assessment \*
  - b) Record linkage \*
  - c) Self-report
  - d) No description
- 2) Was follow-up long enough for outcomes to occur?
  - a) Yes (if follow-up of 2 or more years) \*
  - b) No
- 3) Adequacy of follow-up (or participation rate for prevalence studies) of cohorts
  - a) Complete follow-up - all subjects accounted for \*
  - b) Subjects lost to follow-up unlikely to introduce bias - full description of loss to follow-up including death \*
  - c) Follow-up rate gives sub-optimal description of those lost
  - d) No statement on loss to follow-up

**Supplementary Table 8.** Results of the quality appraisal for included studies (n=205)

Author	Year	Selection				Comparability	Outcome			Total/9
		1) Representativeness of the exposed cohort	2) Selection of the non-exposed cohort	3) Ascertainment of exposure	4) Demonstration that outcome of interest was not present at start of study	1) Comparability of cohorts on the basis of the design or analysis	1) Assessment of outcome	2) Was follow-up long enough for outcomes to occur	3) Adequacy of follow-up of cohorts

<sup>†</sup> Study not included in analysis because sample came from a special population whose inclusion may have confounded results (total instances = 6).

<sup>‡</sup> Study not included in analysis because it reported data pre-1972 – insufficient data available for pooling estimates from this period.

CSHA Working Group, Canadian Study of Health and Ageing Working Group.
