

Supplemental Table S9. Predictive value of endoscopy history in GERA. We compared time-dependent AUCs of 5- and 10-year absolute risks based on a model with age, first-degree CRC family history, and sex to Model 2 (age, first-degree CRC family history, sex and endoscopy history) in GERA European ancestry participants.

<b>Model</b>	<b>5-year AUC</b>	<b>10-year AUC</b>
<b>All participants eligible for screening with age 45-74 years</b>		
Age, family history, sex	0.633	0.649
Age, family history, sex, endoscopy history	0.636	0.659
<b>All participants with age 40-49 years</b>		
Age, family history, sex	0.623	0.745
Age, family history, sex, endoscopy history	0.639	0.766
<b>All European participants</b>		
Age, family history, sex	0.706	0.699
Age, family history, sex, endoscopy history	0.706	0.704
