

Description of Additional Supplementary Files

Supplementary Movie: Movie of triadic percolation. The structural network is a Poisson networks of 20 nodes and average degree $\langle c \rangle = 4$ and $\langle p \rangle = 1$. The regulatory network has Poisson positive and negative regulatory degree distribution $\langle c^+ \rangle = 4$ and $\langle c^- \rangle = 1$. The coordinates of nodes in the movie are randomly assigned. Active nodes are highlighted in orange and active links are show in blue (inactive links are not shown).
